

CD SERVO CONTROLLER WITH MCU (WITH CLOCK AND RADIO FREQUENCY DISPLAY)

DESCRIPTION

SC9697 is a CD play controller with mature functions. It provides the functions of CD play, DTS, cassette, AUX, electronic volume control, remote control, clock display, alarm clock boot-strap and so on. The circuit includes CD digital servo control, CD signal processor, digital audio DAC output, earphone amplifier and direct drive LCD. It needs only a few external components with low cost.

FEATURES

- * CD play
 - Compatible with CD/CD-R/CD-RW
 - Support CD play/pause
 - Support CD previous/ next track
 - Support CD fast forward/fast backward
 - Support CD one track repeat, all tracks repeat play and display
 - Support CD random play display
 - Support CD scan play display
 - CD sync cassette record function
- * Radio reception
 - Four area wave bands selection(USA, GEN1/2, JAPAN)
 - Support manual up and down adjust
 - Support auto up and down adjust
 - Pre-store broadcasting station (FM: 10, AM/MW: 10, LW:5)
- * Cassette function
 - Support TAPE display
- * AUX function
 - Only AUX function
- * Electronic volume control function
 - CD/radio reception/cassette/AUX sound channel switch
 - Volume adjust control and display
 - Pre-set POP, CLASS, and ROCK three volume modes
 - Support mute control and display
 - Support X-BASS switch control and display
 - Support ENCODER-VOLUME control

ORDERING INFORMATION

Device	Package
SC9697	QFP-100-14X20-0.65

- * Clock function
 - Support clock display adjust
 - Support alarm clock, boot-strap and ring bell selectable.
 - Support nap function
 - Support sleep function

FUNCTION DESCRIPTIONS

1. MCU

8-bit MCU is the core of SC9697 which includes 384 bytes memory and 16K program space. Its abundant IO ports resource can be configured flexibly according to the requirements.

2. CD servo decoder

CD servo decoder is the main block of SC9697 which will finish the CD servo and decoder function. Support single and dual speed switch function, and compatible with CD/CD-R/CD-RW.

3. 16-bit audio DAC

Support maximum word length of 20-bit I²S data input (f_{sys}=256fs) and word length of 16, 18, and 20 bits EIAJ data input (f_{sys}=384fs) .

4. IF counter

IF counting circuit mainly includes a 16-bit counter which will count for IF signal in fixed gating time.

HANDLING MOS DEVICES:

Electrostatic charges can exist in many things. All of our MOS devices are internally protected against electrostatic discharge but they can be damaged if the following precautions are not taken:

- Persons at a work bench should be earthed via a wrist strap.
- Equipment cases should be earthed.
- All tools used during assembly, including soldering tools and solder baths, must be earthed.
- MOS devices should be packed for dispatch in antistatic/conductive containers.
