This data sheet is a summary of the specifications and conditions for N9041B UXA signal analyzers.

### **Definitions and Conditions**

Specifications describe the performance of parameters covered by the product warranty and apply to room temperature range 20 to 30 °C, unless otherwise noted.

95th percentile values indicate the breadth of the population (approx.  $2\sigma$ ) of performance tolerances expected to be met in 95 percent of the cases with a 50 percent confidence, for any ambient temperature in the range of 20 to 30 °C. In addition to the statistical observations of a sample of instruments, these values include the effects of the uncertainties of external calibration references. These values are not warranted. These values are updated occasionally if a significant change in the statistically observed behavior of production instruments is observed.

Typical describes additional product performance information that is not covered by the product warranty. It is performance beyond specifications that 80 percent of the units exhibit with a 95 percent confidence level over the temperature range 20 to 30 °C. Typical performance does not include measurement uncertainty.

Nominal values indicate expected performance, or describe product performance that is useful in the application of the product, but is not covered by the product warranty.

The analyzer will meet its specifications when:

- The analyzer is within its calibration cycle.
- Under auto couple control, except that Auto Sweep Time Rules = Accy.
- The analyzer has been stored at an ambient temperature within the allowed operating range for at least two hours before being turned on, if it had previously been stored at a temperature range inside the allowed storage range but outside the allowed operating range.
- The analyzer has been turned on at least 30 minutes with Auto Align set to Normal, or if Auto Align is set to Off or Partial, alignments must have been run recently enough to prevent an Alert message. If the Alert condition is changed from "Time and Temperature" to one of the disabled duration choices, the analyzer may fail to meet specifications without informing the user. If Auto Align is set to Light, performance is not warranted, and nominal performance will degrade to become a factor of 1.4 wider for any specification subject to alignment, such as amplitude tolerances.
- The term "mixer level" is used as a condition for many specifications in this document. This term is a conceptual quantity that is defined as follows: Mixer Level (dBm) = RF Input Power Level (dBm) - (Electronic + Mechanical) Attenuation (dBm)

# Frequency and Time Specifications

Frequency Range		Input 1	Input 2
Option 590		3 Hz to 50 GHz	3 Hz to 90 GHz <sup>1</sup>
Option 5CX		3 Hz to 50 GHz	3 Hz to 110 GHz
Frequency Band	LO Multiple (N)	Frequency Range	Additional Information
0	1	3 Hz to 3.6 GHz	
1	1	3.5 to 8.4 GHz	
2	2	8.3 to 13.6 GHz	
3	2	13.5 to 17.1 GHz	
4	4	17 to 26.5 GHz	
5	4	26.4 to 34.5 GHz	
6	8	34.4 to 50 GHz	
7	8/12	49.9 to 75 GHz	For Input 2 only
8	12/14	74.9 to 110 GHz	For Input 2 only
Frequency Reference			
Accuracy	± [(time since last adjust	ment x aging rate) + temperature sta	ability + calibration accuracy]
Aging rate	± 3 x 10 <sup>-8</sup> / year		
Temperature stability Full temperature range	± 4.5 x 10 <sup>-9</sup>		
Achievable initial calibration accuracy	± 3.1 x 10 <sup>-8</sup>		
Example frequency reference accuracy	$= \pm (3 \times 10^{-8} + 4.5 \times 10^{-9})$	+ 3.1 x 10 <sup>-8</sup> )	
1 year after last adjustment	$= \pm 6.6 \times 10^{-8}$		
Residual FM	≤ (0.25 Hz x N) p-p in 20		
(Center frequency = 1 GHz 10 Hz RBW, 10 Hz VBW)	See band table above fo	r N (LO multiple)	
Frequency Readout Accuracy (Start, Stop, C	enter, Marker)		
± (marker frequency x frequency reference ac	curacy + 0.10% x span + 5 % x I	RBW + 2 Hz + 0.5 x horizontal resolut	tion²)
Marker Frequency Counter			
Accuracy	± (marker frequency x fre	equency reference accuracy + 0.100	Hz)
Delta counter accuracy	± (delta frequency x freq	uency reference accuracy + 0.141 Hz	z)
Counter resolution	0.001 Hz		
Frequency Span (FFT and Swept Mode)			
Range	0 Hz (zero span), 10 Hz t	o maximum frequency of instrument	
Resolution	2 Hz	•	
Accuracy Swept FFT	± (0.1% x span + horizon ± (0.1% x span + horizon		

<sup>1.</sup> The exact maximum frequency for Option 590 depends on the analysis bandwidth option chosen: Max frequency = (90 - 1/2x (analysis bandwidth in GHz))
2. Horizontal resolution is span/(sweep point-1)
3. Nominal for Input 2 above 50 GHz

# Frequency and Time Specifications (continued)

Span = 0 Hz   Span ≥ 10 Hz   1 ms to 4000 s, nominal   2 ms to 2 ms	Sweep Time And Triggering

<sup>1.</sup> The ADC clipping level declines at low frequencies (below 50 MHz) when the LO feedthrough (the signal that appears at 0 Hz) is within 5 times the prefilter bandwidth (see table) and must be handled by the ADC. For example, with a 300 kHz RBW and prefilter bandwidth at 966 kHz, the clipping level declines for signal frequencies below 4.83 MHz. For signal frequencies below 2.5 times the prefilter bandwidth, there will be additional reduction due to the presence of the image signal (the signal that appears at the negative of the input signal frequency) at the ADC.

<sup>1.</sup> For wide reference loop bandwidth.

<sup>2.</sup> Keysight measures 100% of the signal analyzers for Input 1 phase noise at 10 Hz offset from a 1 GHz carrier in the factory production process. This measurement requires a signal of exceptionally low phase noise that is characterized with specialized processes. It is impractical for field and customer use. Because field verification is impractical, Keysight only gives a typical result. More than 80% of prototype instruments met this "typical" specification; the factory test line limit is set commensurate with an on-going 80% yield to this typical. Like all typical specifications, there is no guardbanding for measurement uncertainty. The factory test line limit is consistent with a warranted specification of -89 dBc/Hz.

## **General Specifications**

### Temperature range

Operating 0 to 40 °C -40 to +70 °C Storage

Altitude

4,500 meters (approx. 15,000 feet)

### **EMC**

Complies with the essential requirements of the European EMC Directive as well as current editions of the following standards (dates and editions are cited in the Declaration of Conformity):

- IEC/EN 61326-1
- CISPR Pub 11 Group 1, class A
- AS/NZS CISPR 11
- ICES/NMB-001

This ISM device complies with Canadian ICES-001.

Cet appareil ISM est conforme a la norme NMB-001 du Canada.

The N9041B is in full compliance with CISPR 11, Class A emission limits and is declared as such. In addition, the N9041B has been type tested and shown to meet CISPR 11, Class B emission limits. The use of USB accessories, or the enabling of the digital bus, may affect the UXA's conformance to Class B emissions. Information regarding the Class B emission performance of the N9041B is provided as a convenience to the user and is not intended to be a regulatory declaration.

#### South Korean Class A EMC declaration

This equipment has been conformity assessed for use in business environments. In a residential environment this equipment may cause radio interference \* This EMC statement applies to the equipment only for use in business environment.

사용자 안내문

이 기기는 업무용 환경에서 사용할 목적으로 적합성 평가를 받은 기기로서 가정용 환경에서 사용하는 경우 전파간섭의 우려가 있습니다.

※ 사용자 안내문은 "업무용 방송통신기자재"에만 적용한다.

### Safety

Complies with the essential requirements of the European Low Voltage Directive as well as current editions of the following standards (dates and editions are cited in the Declaration of Conformity):

- IEC/EN 61010-1
- Canada: CSA C22.2 No. 61010-1
- USA: UL std no. 61010-1

### Acoustic Statement (European Machinery Directive)

Acoustic noise emission

LpA < 70 dB

Operator position

Normal operation mode per ISO 7779

### **Environmental Stress**

Samples of this product have been type tested in accordance with the Keysight Environmental Test Manual and verified to be robust against the environmental stresses of storage, transportation, and end-use; those stresses include, but are not limited to, temperature, humidity, shock, vibration, altitude, and power line conditions; test methods are aligned with IEC 60068-2 and levels are similar to MILPRF-28800F Class 3.

### **Power Requirements**

Voltage and frequency 100/120 V, 50/60/400 Hz

220/240 V, 50/60 Hz

Power consumption

850 W (Maximum)1

Standby 25 W

The actual power consumption depends on the configuration of the instrument. For example, power consumption of an N9041B with Option H1G installed is nominally 620 W.

Residual output signals	≤ -88 dBm (nominal)	

### Option CRW IF output, ultra-wide bandwidth<sup>1</sup>

General Port Specifications		
Connector Impedance	SMA female 50 $\Omega$ nominal	Labeled as "EXT IF OUT"
IF Output, Ultra-Wide Bandwidth		
Center frequency Bandwidth	5 GHz Up to 9.6 GHz	
IF flatness At -4.8 GHz from center of IF bandwidth	+2 dB nominal	
At +4.8 GHz from center of IF bandwidth	-6 dB nominal	
Conversion gain <sup>2</sup>	-8 to -3 dB (nominal)	

For input frequency > 50 GHz only.
 At the IF center frequency of 5 GHz

# Other Optional Outputs (continued)

# Option YAV Y-axis video output

General port specifications					
Connector Impedance	BNC female	Shared with other options $50\ \Omega$ nominal			
Screen video					
Operating conditions		W. W. W. W. W. W.			
Display scale types	Log or Lin	"Lin" is linear in voltage			
Log scales Modes	All (0.1 to 20 dB/div) Spectrum analyzer only				
Gating	Gating must be off				
Output scaling	0 to 1.0 V open circuit, representing bottom t	to top of screen			
Offset	± 1% of full scale nominal				
Gain accuracy	± 1% of output voltage nominal				
Log video (Log envelope) output					
Amplitude range (terminated with 50 $\Omega$ )					
Maximum	$1.0\mathrm{V}$ nominal for $-10\mathrm{dBm}$ at the mixer				
Scale factor	1 V per 192.66 dB				
Bandwidth	Set by RBW				
Operating conditions	Select Sweep Type = Swept				
Linear video output					
Amplitude range (terminated with 50 $\Omega$ )					
Maximum	1.0 V nominal for signal envelope at the refer	ence level			
Minimum	0 V				
Scale factor		el in volts, the scale factor is 200% of carrier level per volt.			
	Regardless of the carrier level, the scale fact	or is 100% of reference level per volt.			
Bandwidth	Set by RBW				
Operating conditions	Select Sweep Type = Swept

1		6.00	-153 dBm/Hz			Same as Input 1
2		10.80	-150 dBm/Hz			Same as Input 1
3	15.15		-148 dBm/Hz		Same as Input 1	
4		21.80	-146 dBm/Hz		Same as Input 1	
5		30.5	-143 dBm/Hz			Same as Input 1
6		42.25	-137 dBm/Hz			Same as Input 1
7		NA	NA			-150 dBm/Hz
8		NA	NA			-149 dBm/Hz

<sup>1.</sup> In the 1 GHz bandwidth path, the span and bandwidth will be 40 MHz minimum. Below 40 MHz, a narrower IF path is used.

Signal Level is -6 dB relative to full scale at the center frequency.

The residual performance is dominated by a single residual 50 MHz to the left of the center of the screen. It is an artifact of the ADC architecture. If residual performance is critical and span requirements are flexible, then reducing the span to 255 MHz and making use of the 255 MHz IF path will eliminate this residual.

### Option H1G 1 GHz analysis bandwidth (continued)

		Input 1	Input 2
Spurious responses			
LO-related spurious responses			
(Offset from carrier 300 Hz to 10 MHz <sup>1</sup> , mixer l	-72 dBc <sup>2</sup> +20 x log(N <sup>3</sup> ), nominal	Same as Input 1	
Close-in sidebands			
(LO-related, offset <300 Hz, mixer level -10 dBm)		$-60 \text{ dBc}^2 +20 \text{ x log}(N^3)$ , nominal	Same as Input 1
Data Acquisition, 1 GHz IF path (Option H1G)			
Time record length			
Analysis tool			
IQ analyzer	8,000,000 sample pairs	Waveform measurement	
Advanced tool	32-bit data packing	With 89600	VSA or fast capture
IF bandwidth	Length (IQ sample pairs)		
1 GHz ≥ IFBW > 40 MHz	838,859,979 to 419,429,990		
Maximum IQ capture time (advanced tools)	Length of IQ sample pairs/Sample rat	e (IQ pairs)	
Sample rate (IQ pairs)	Minimum of (1.25 x IFBW, 300 Msa/s)		
ADC resolution	12 bits		

<sup>1.</sup> A noteworthy group of harmonically related sidebands is often present with a level of nominally -80 dBc at 300 Hz and envelope falling off (30 dB/decade) with increasing offsets.

2. Nominally -40 dBc under large magnetic (0.38 Gauss rms) or vibrational (0.21 g rms) environmental stimuli.

3. N is the LO multiplication factor. Refer to page 3 for the N value verses frequency ranges.

### Real-time Spectrum Analyzer (RTSA)

# Option RT1 real-time spectrum analyzer, basic detection, or RT2 real-time spectrum analyzer, optimal detection

### Real-time analysis

Real-time analysis bandwidth

Option RT1 Up to 255 MHz Analysis BW option determines the max real-time BW

For Frequency Mask Triggering (FMT)

Option RT2 Up to 255 MHz (max 255 MHz with H1G)

Minimum detectable signal duration

with > 60 dB StM1 ratio

Option RT1 11.42 ns Option RT2 3.33 ns

Minimum signal duration with 100% Signal is at mask level

probability of intercept (POI) at full Signal is at mask level, span > 85 MHz

amplitude accuracy

 $\begin{array}{ccc} \text{Option RT1} & & 17.17 \ \mu\text{s} \\ \text{Option RT2} & & 3.51 \ \mu\text{s} \\ \text{Minimum acquisition time} & & 100 \ \mu\text{s} \\ \text{FFT rate} & & 292,969/\text{s} \end{array}$ 

Supported Detectors Peak, Negative Peak, Sample, Average

Number of Traces 6 Number of Markers 12

Supported Markers Normal, Delta, Noise, Band Power

Supported triggers Level, Level with Time Qualified (TQT), Line, External, RF burst, Frame, Frequency Mask (FMT), FMT with TQT

KEYSIGHT SERVICES
Accelerate Technology Adoption.
Lower costs.

#### **Keysight Services**

#### www.keysight.com/find/service

Our deep offering in design, test, and measurement services deploys an industry-leading array of people, processes, and tools. The result? We help you implement new technologies and engineer improved processes that lower costs.

### Three-Year Warranty

### www.keysight.com/find/ThreeYearWarranty

Keysight's committed to superior product quality and lower total cost of ownership. Keysight is the only test and measurement company with three-year warranty standard on all instruments, worldwide. And, we provide a one-year warranty on many accessories, calibration devices, systems and custom products.

### Keysight Assurance Plans

### www.keysight.com/find/AssurancePlans

Up to ten years of protection and no budgetary surprises to ensure your instruments are operating to specification, so you can rely on accurate measurements.

### Keysight Channel Partners

### www.keysight.com/find/channelpartners

Get the best of both worlds: Keysight's measurement expertise and product breadth, combined with channel partner convenience.
