

**FLASH-ROM MODULE 16MByte (4M x 32-Bit) ,72pin-SODIMM,
3.3V**

Part No. HMF4M32B8VG

GENERAL DESCRIPTION

The HMF4M32B8VG is a high-speed flash read only memory (FROM) module containing 4,194,304 words organized in a x32bit configuration. The module consists of eight 2M x 8 FROM mounted on a 72-pin, single-sided, FR4-printed circuit board. Commands are written to the command register using standard microprocessor write timings.

Register contents serve as input to an internal state-machine, which controls the erase and programming circuitry. Write cycles also internally latch addresses and data needed for the programming and erase operations. Reading data out of the device is similar to reading from other flash or EPROM devices.

Output enable (/OE) and write enable (/WE) can set the memory input and output.

When FROM module is disable condition the module is becoming power standby mode, system designer can get low -power design. All module components may be powered from a single +3.0V DC power supply.

W Stresses greater than those listed under " Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operating section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

ERASE AND PROGRAMMING PERFORMANCE

PARAMETER		TYP	MAX	UNIT	COMMENTS
Block Erase Time		0.7	15	sec	Excludes 00h programming prior to erasure
Chip Erase Time		25	-	sec
