

Infrared Receiver Control Receiver Module

IRM-36xxCF45series

Features

- High protection ability against EMI
- Circular lens for improved reception characteristics
- Min burst length: 400us
- Min gap length: 450us
- Low operating voltage ($V_{CC} = 2.5V$)
- High immunity against ambient light
- Long reception range
- High sensitivity
- Pb free and RoHS compliant

Description

The IRM-36xxCF45 devices are miniature type infrared receivers which have been developed and designed by using the latest IC technology, with high immunity against optical interferences and power supply noise. The photo diode and preamplifier are assembled onto a lead frame and molded into an epoxy package which operates as an IR filter. The demodulated output signal can directly be decoded by a microprocessor.

Pin Configuration

1. OUT
2. GND
3. V_{CC}

Applications

- AV equipment such as TV, VCR, DVD, CD, MD, etc.
- Toy applications
- CATV set top boxes
- Multi-media Equipment

Application Circuit

The RC Filter must be connected as close as possible to V_{CC} and GND pins.

Internal pull up resistor	R _{PU}	40	50	60	k Ω	

Test method

The specified electro-optical characteristics are valid under the following conditions.

1. Measurement environment

A place without extreme light reflections.

2. External light

The environment contains an ordinary, white fluorescent lamp without high frequency modulation. The color temperature is 2856K and the illumination at the IR receiver is less than 10 Lux ($E_v \leq 10\text{Lux}$).

3. Standard transmitter

The test transmitter is calibrated by using the circuit shown in figure 2. The radiation intensity of the transmitter is adjusted until $V_o=400\text{mVp-p}$. Both, the test transmitter and the photo diode, have a peak wavelength of 940nm. The photo diode for calibration is PD438B ($\lambda_p=940\text{nm}$, $V_r=5\text{V}$).
