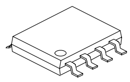
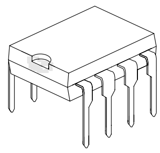
LOW NOISE DUAL J-FET OPERATIONAL AMPLIFIER



SOP-8



DIP-8

TSSOP-8

*Pb-free plating product number: TL072L

■ DESCRIPTION

The UTC **TL072** is a high speed J-FET input quad operational amplifier. It incorporates well matched, high voltage J-FET and bipolar transistors in a monolithic integrated circuit. The device features high slew rates, low input bias and offset current, and low offset voltage temperature coefficient.

■ FEATURES

*Low power consumption
*Wide common-mode (up to V_{CC+}) and differential voltage range
*Low input bias and offset current
*Low noise en = 15nV / $\sqrt{Hz}$ (typ)
*Output short-circuit protection
*High input impedance J-FET input stage
*Low harmonic distortion:0.01%(typ)
*Internal frequency compensation
*Latch up free operation
*High slewrate:16V/µs(typ)

■ ABSOLUTE MAXIMUM RATINGS (Ta=25°C)

PARAMETER	SYMBOL	RATINGS	UNIT
Supply Voltage (note 1)	V_{CC}	±18	V
Input Voltage (note 2)	V_{IN}	±15	V
Differential Input Voltage (note 3)	$V_{I(DIFF)}$	±30	V
Power Dissipation	P_D	680	mW
Output Short-Circuit Duration (Note 4)		Infinite	
Operating Temperature	T_{OPR}	0 ~ +70	°C
Storage Temperature	T_{STG}	-65 ~ +150	°C

Notes: 1. All voltage values, except differential voltage, are with respect to the zero reference level (ground) of the supply voltages where the zero reference level is the midpoint between V_{CC}- and V_{CC}+.

2. The magnitude of the input voltage must never exceed the magnitude of the supply voltage or 15 volts, whichever is less.
3. Differential voltages are at the non-inverting input terminal with respect to the inverting input terminal.
4. The output may be shorted to ground or to either supply. Temperature and/or supply voltages must be limited to ensure that the dissipation rating is not exceeded.
5. Absolute maximum ratings are those values beyond which the device could be permanently damaged. Absolute maximum ratings are stress ratings only and functional device operation is not implied.
