Description

M/A-COM's SW-226/227/228-PIN are GaAs MMIC SPDT switches packaged in lead-free, surface mount CR-2 ceramic style packages. The SW-226-PIN is a terminated SPDT. The SW-227-PIN offers high isolation. The SW-228-PIN offers low insertion loss. This ceramic switch platform has a common footprint for all three designs. The CR-2 package is hermetically sealed, making these switches ideal for space, military radios, and other environmentally harsh applications.

Typical applications include synthesizer switching, transmit/receive switching, switch matrices and filter banks in systems such as radio and cellular equipment, PCM, GPS, and fiber optic modules.

The SW-226/227/228-PIN are fabricated as monolithic GaAs MMICs using a 1.0 micron MESFET process.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

SW-226-PIN and SW-227-PIN Truth Table^{6,7}

Control Input				Condition of Switch, RF Common to each RF Port	
A1	B1	A2	B2	RF1	RF2
1	0	0	1	ON	OFF
0	1	1	0	OFF	ON

SW-228-PIN Truth Table^{6,7}

Control Input		Condition of Switch, RF Common to each RF Port	
A1	B1	RF1	RF2
1	0	ON	OFF
0	1	OFF	ON

6. 0 = 0 V to -0.2 V, 1 = -5 V to -8 V

7. For the SW-227-PIN and SW-228-PIN only, when an RF output is "OFF" it is shorted to case ground.
