DESCRIPTION

M54/74HCT160 Decade, Asynchronous Clear
M54/74HCT161 Binary, Asynchronous Clear
M54/74HCT162 Decade, Synchronous Clear
M54/74HCT163 Binary, Synchronous Clear

The M54/74HCT160, 161, 162 and 163 are high speed CMOS SYNCHRONOUS PRESETTABLE COUNTERS fabricated with silicon gate C^2 MOS technology. They have the same high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

The M54/74HCT160/162 are BCD Decade counters and the M54/74HCT161/163 are 4 bit binary counters. The **CLOCK** input is active on the rising edge. Both **LOAD** and **CLEAR** inputs are active Low.

Presetting of all four IC's is synchronous on the rising edge of the **CLOCK**. The function on the M54/74HCT162/163 is synchronous to **CLOCK**, while the M54/74HCT160/161 counters are cleared asynchronously. Two enable inputs (**TE** and **PE**) and **CARRY** output are provided to enable easy cascading of counters, which facilitates easy implementation of N-bit counters without using external gates. This integrated circuit has input and output characteristics that are fully compatible with 54/74 LSTTL logic families. M54/74HCT devices are designed to directly interface HSC^2 MOS systems with TTL and NMOS components. They are also plug in replacements for LSTTL devices giving a reduction of power consumption. All inputs are equipped with

TOTAL OPERATING CURRENT WHEN USING A CAPACITIVE LOAD

When the outputs drive a capacitive load, the total current can be calculated as follows :

For M74HCT160/162 :

$$\Delta I_{CC} = f_{CK} \cdot V_{CC} \cdot \left(\frac{C_a}{2} + \frac{C_b}{5} + \frac{C_c}{10} + \frac{C_d}{10} + \frac{C_{ca}}{10} \right)$$

For M74HCT161/163 :

$$\Delta I_{CC} = f_{CK} \cdot V_{CC} \cdot \left(\frac{C_a}{2} + \frac{C_b}{4} + \frac{C_c}{8} + \frac{C_d}{16} + \frac{C_{ca}}{16} \right)$$

C_a to C_{ca} are the capacitors loading the outputs.
