16 M EDO DRAM (4-Mword $\times$ 4-bit)
4 k Refresh/2 k Refresh

HITACHI

ADE-203-633D (Z)
Rev. 4.0
Nov. 1997

Description

The Hitachi HM5116405 Series, HM5117405 Series are CMOS dynamic RAMs organized 4,194,304-word $\times$ 4-bit. They employ the most advanced CMOS technology for high performance and low power. The HM5116405 Series, HM5117405 Series offer Extended Data Out (EDO) Page Mode as a high speed access mode. They have package variations of standard 26-pin plastic SOJ and standard 26-pin plastic TSOP II.

Features

- Single 5 V ($\pm 10\%$)
- Access time: 50 ns/60 ns/70 ns (max)
- Power dissipation
 - Active mode : 495 mW/440 mW/385 mW (max) (HM5116405 Series)
: 550 mW/495 mW/440 mW (max) (HM5117405 Series)
 - Standby mode : 11 mW (max)
: 0.83 mW (max) (L-version)
- EDO page mode capability
- Long refresh period
 - 4096 refresh cycles : 64 ms (HM5116405 Series)
: 128 ms (L-version)
 - 2048 refresh cycles : 32 ms (HM5117405 Series)
: 128 ms (L-version)
- 3 variations of refresh
 - $\overline{\text{RAS}}$ -only refresh
 - $\overline{\text{CAS}}$ -before- $\overline{\text{RAS}}$ refresh
 - Hidden refresh

HM5116405 Series, HM5117405 Series

- Battery backup operation (L-version)
- Test function
 - 16-bit parallel test mode

Ordering Information

Type No.	Access time	Package
HM5116405S-5	50 ns	300-mil 26-pin plastic SOJ (CP-26/24DB)

Pin Arrangement

Pin Description

Pin name	Function
A0 to A11	Address input - Row/Refresh address A0 to A11 - Column address A0 to A9
I/O1 to I/O4	Data input/Data output
$\overline{\text{RAS}}$	Row address strobe
$\overline{\text{CAS}}$	Column address strobe
$\overline{\text{WE}}$	Write enable
$\overline{\text{OE}}$	Output enable
V_{CC}	Power supply
V_{SS}	Ground

HM5116405 Series, HM5117405 Series

Pin Arrangement

Pin Description

Pin name	Function
A0 to A10	Address input - Row/Refresh address A0 to A10 - Column address A0 to A10
I/O1 to I/O4	Data input/Data output
$\overline{RAS}$	Row address strobe
$\overline{CAS}$	Column address strobe
$\overline{WE}$	Write enable
$\overline{OE}$	Output enable
V _{CC}	Power supply
V _{SS}	Ground
NC	No connection

Refresh period	t_{REF}	64	ms	4096 cycles
Refresh period (L-version)	t_{REF}	128	ms	4096 cycles

HM5116405 Series, HM5117405 Series

Refresh (HM5117405 Series)

Parameter	Symbol	Max	Unit	Notes
Refresh period	t_{REF}	32	ms	2048 cycles
Refresh period (L-version)	t_{REF}	128	ms	2048 cycles

- Notes:
1. AC measurements assume $t_T = 2$ ns.
 2. An initial pause of 200 μ s is required after power up followed by a minimum of eight initialization cycles (any combination of cycles containing $\overline{RAS}$ -only refresh or $\overline{CAS}$ -before- $\overline{RAS}$ refresh). If the internal refresh counter is used, a minimum of eight $\overline{CAS}$ -before- $\overline{RAS}$ refresh cycles are required.
 3. Operation with the t_{RCD} (max) limit insures that t_{RAC} (max) can be met, t_{RCD} (max) is specified as a reference point only; if t_{RCD} is greater than the specified t_{RCD} (max) limit, then access time is controlled exclusively by t_{CAC} .
 4. Operation with the t_{RAD} (max) limit insures that t_{RAC} (max) can be met, t_{RAD} (max) is specified as a reference point only; if t_{RAD} is greater than the specified t_{RAD} (max) limit, then access time is controlled exclusively by t_{AA} .
 5. Either t_{OED} or t_{CDD} must be satisfied.
 6. Either t_{DZO} or t_{DZC} must be satisfied.
 7. V_{IH} (min) and V_{IL} (max) are reference levels for measuring timing of input signals. Also, transition times are measured between V_{IH} (min) and V_{IL} (max).
 8. Assumes that $t_{RCD} \leq t_{RCD}$ (max) and $t_{RAD} \leq t_{RAD}$ (max). If t_{RCD} or t_{RAD} is greater than the maximum recommended value shown in this table, t_{RAC} exceeds the value shown.
 9. Measured with a load circuit equivalent to 1 TTL loads and 100 pF.
 10. Assumes that $t_{RCD} \geq t_{RCD}$ (max) and $t_{RCD} + t_{CAC}$ (max) $\geq t_{RAD} + t_{AA}$ (max).
 11. Assumes that $t_{RAD} \geq t_{RAD}$ (max) and $t_{RCD} + t_{CAC}$ (max) $\leq t_{RAD} + t_{AA}$ (max).
 12. Either t_{RCH} or t_{RRH} must be satisfied for a read cycles.
 13. t_{OFF} (max) and t_{OEZ} (max) define the time at which the outputs achieve the open circuit condition and are not referred to output voltage levels.
 14. t_{WCS} , t_{RWD} , t_{CWD} , t_{AWD} and t_{CPW} are not restrictive operating parameters. They are included in the data sheet as electrical characteristics only; if $t_{WCS} \geq t_{WCS}$ (min), the cycle is an early write cycle and the data out pin will remain open circuit (high impedance) throughout the entire cycle; if $t_{RWD} \geq t_{RWD}$ (min), $t_{CWD} \geq t_{CWD}$ (min), and $t_{AWD} \geq t_{AWD}$ (min), or $t_{CWD} \geq t_{CWD}$ (min), $t_{AWD} \geq t_{AWD}$ (min) and $t_{CPW} \geq t_{CPW}$ (min), the cycle is a read-modify-write and the data output will contain data read from the selected cell; if neither of the above sets of conditions is satisfied, the condition of the data out (at access time) is indeterminate.
 15. These parameters are referred to $\overline{CAS}$ leading edge in early write cycles and to $\overline{WE}$ leading edge in delayed write or read-modify-write cycles.
 16. t_{RASP} defines $\overline{RAS}$ pulse width in EDO page mode cycles.
 17. Access time is determined by the longest among t_{AA} , t_{CAC} and t_{CPA} .
 18. In delayed write or read-modify-write cycles, $\overline{OE}$ must disable output buffer prior to applying data to device.
 19. The 16M DRAM offers a 16-bit time saving parallel test mode. Address CA0 and CA1 for the 4M $\times$ 4 are don't care during test mode. Test mode is set by performing a $\overline{WE}$ -and- $\overline{CAS}$ -before- $\overline{RAS}$ (WCBR) cycle. In 16-bit parallel test mode, data is written into 4 bits in parallel at each I/O (I/O1 to I/O4) and read out from each I/O.
If 4 bits of each I/O are equal (all 1s or 0s), data output pin is a high state during test mode read cycle, then the device has passed. If they are not equal, data output pin is a low state, then the device has failed.
Refresh during test mode operation can be performed by normal read cycles or by WCBR refresh cycles.

HM5116405 Series, HM5117405 Series

To get out of test mode and enter a normal operation mode, perform either a regular $\overline{\text{CAS}}$ -before- $\overline{\text{RAS}}$ refresh cycle or $\overline{\text{RAS}}$ -only refresh cycle.

20. In a test mode read cycle, the value of t_{RAC} , t_{AA} , t_{CAC} and t_{CPA} is delayed by 2 ns to 5 ns for the specified value. These parameters should be specified in test mode cycles by adding the above value to the specified value in this data sheet.
21. t_{HPC} (min) can be achieved during a series of EDO page mode write cycles or EDO page mode read cycles. If both write and read operation are mixed in a EDO page mode $\overline{\text{RAS}}$ cycle (EDO page mode mix cycle (1), (2)), minimum value of $\overline{\text{CAS}}$ cycle ($t_{\text{CAS}} + t_{\text{CP}} + 2 t_{\text{J}}$) becomes greater than the specified t_{HPC} (min) value. The value of $\overline{\text{CAS}}$ cycle time of mixed EDO page mode is shown in EDO page mode mix cycle (1) and (2).
Data output turns off and becomes high impedance from later rising edge of $\overline{\text{RAS}}$ and $\overline{\text{CAS}}$.
Hold time and turn off time are specified by the timing specifications of later rising edge of $\overline{\text{RAS}}$ and $\overline{\text{CAS}}$ between t_{OHR} and t_{OH} , and between t_{OFR} and t_{OFF} .
22. Data output turns off and becomes high impedance from later rising edge of $\overline{\text{RAS}}$ and $\overline{\text{CAS}}$.
Hold time and turn off time are specified by the timing specifications of later rising edge of $\overline{\text{RAS}}$ and $\overline{\text{CAS}}$ between t_{OHR} and t_{OH} and between t_{OFR} and t_{OFF} .
23. XXX: H or L (H: $V_{\text{IH}} (\text{min}) \leq V_{\text{IN}} \leq V_{\text{IH}} (\text{max})$, L: $V_{\text{IL}} (\text{min}) \leq V_{\text{IN}} \leq V_{\text{IL}} (\text{max})$)
/////: Invalid Dout
When the address, clock and input pins are not described on timing waveforms, their pins must be applied V_{IH} or V_{IL} .
