

Low Cost 16-Bit Stereo Audio DAC

FEATURES

- Cost effective
- Low distortion
- No zero crossing distortion
- Output voltage swing is proportional to supply voltage ($V_{OPP}=V_{DD}/2$)
- Space saving package SOP8
- Fast setting time permits 2*, 4*, and 8* oversampling (serial input) or double speed operation at 4* oversampling
- Compatible with most of the Japanese input formats; time multiplexed, two's complement, TTL input level

APPLICATIONS

- VCD Player, DVD Player
- CD-ROM, DVD-ROM, CD-RW, DVD-RW

DESCRIPTION

The MS6310 is a voltage-output Digital-to-Analog Converter (DAC). The accuracy of the weight current sources, combined with the unique symmetrical decoding method, preclude zero-crossing distortion and ensures high quality audio reproduction. The MS6310 is pin and function compatible with MS6311, Philips TDA1311.

PIN CONFIGURATION

Symbol	Pin	Description
BCK	1	Bit clock input
WS	2	Word select input
DATA	3	Data input
GND	4	Ground
V_{DD}	5	Positive supply voltage
V_{OL}	6	Left channel output
n.c.	7	not connected
V_{OR}	8	Right channel output

TIMING AND DATA FORMAT

The MS6310 accepts input serial data formats of 16-bit word length. Left and right data words are time multiplexed. The MSB must always be first. The format of data input is shown in Figs. 2 and 3. With a HIGH level on the word select input (WS), data is placed in the left input register and with LOW level on the WS input, data is placed in the right register (Fig. 1). The data in the input registers are simultaneously latched in the output registers which control the bit switches. Internal bias currents I_{BL} and I_{BR} are each added to the full scale output current I_{FS} in order to achieve the maximum dynamic range at the outputs of OP1 and OP2 (Fig. 1). In this way the maximum dynamic range is achieved over the entire power supply range.

APPLICATION INFORMATION

Basic application example

A typical example of a CD-application with the MS6310 is shown in Fig.4. It features typical decoupling components and a second-order analog post-filter (smoothing filter) stage providing a line output.
