

RFFM8506

4.9GHz to 5.85GHz 802.11a/n/ac WiFi
Front End Module

The RFFM8506 provides a complete integrated solution in a single front end module (FEM) for WiFi 802.11a/n/ac systems. The ultra-small factor and integrated matching minimizes layout area in the customer's application and greatly reduces the number of external components. This simplifies the total front end solution by reducing the bill of materials, system footprint, and manufacturing cost. The RFFM8506 integrates a 5 GHz power amplifier (PA), single pole double throw switch (SP2T) and an LNA with bypass. The device is provided in a 2.5mm x 2.5mm x 0.45mm, 16-pin QFN package. This module meets or exceeds the RF front end needs of IEEE 802.11a/n/ac WiFi RF systems.

Package: QFN, 16-pin,
2.5mm x 2.5mm x 0.45mm

Features

- $P_{OUT}=17.5\text{dBm}$, 11ac, 80MHz MCS9 at -36dB (1.5%) EVM
- Small Size
- High performance FEM
- Input and Output Matched to 50Ω
- Integrated 5GHz PA, SP2T, Switch, and LNA (with Bypass if required)
- Low Height Package, Suited for SiP and CoB designs

Applications

- Cellular Handsets
- Mobile Devices
- Tablets
- Consumer Electronics
- Gaming
- Netbooks/Notebooks
- TV/Monitors/Video

Absolute Maximum Ratings

Parameter	Rating	Unit
DC Supply Voltage	-0.5 to +5.4	V _{DC}
PA Enable Voltage	-0.5 to 5	V _{DC}
DC Supply Current	500	mA
Operating Case Temperature	-40 to +85	°C
Storage Temperature	-40 to +150	°C
Maximum TX Input Power into 50Ω Load for 11a/n/ac (No Damage)	+12	dBm
Moisture Sensitivity	MSL1	

Caution! ESD sensitive device.

RFMD Green: RoHS status based on EU Directive 2011/65/EU (at time of this document revision), halogen free per IEC 61249-2-21, < 1000ppm each of antimony trioxide in polymeric materials and red phosphorus as a flame retardant, and <2% antimony in solder.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

Timing Diagram

Transmit Timing Diagram
Power ON / OFF Sequence

Note:

1. RF Signal for each specific mode is applied after the DC bias is applied.
2. Total ON/OFF time includes from 10% of control switching to 90% of RF power.
3. Listed values on diagram are typical. The maximum is 0.5 μ s for each mode.
4. For DC voltage levels use the values indicated in the datasheet.

Timing Sequence Notes

802.11a/n/ac Transmit Biasing Instructions

1. Connect the FEM to a signal generator at the input and a spectrum analyzer at the output. Terminate unused ports with 50 Ohms
2. Set the power supply voltage to 3.0-4.2V first with PA_EN < 0.4V. Leakage current will be <15uA typical.
3. Refer to switch operational truth table to set the control lines at the proper levels for WiFi TX. All OFF voltages must be < 0.4V (do not leave floating.)
4. Turn on PA_EN with levels indicated in the datasheet. PA_EN controls the current drawn by the 802.11a/n/ac power amplifier and the current should quickly rise to ~200mA +/- 20mA for a typical part but the actual operating current will be based on the output power desired. Be extremely careful not to exceed 5.0V on the PA_EN pin or the part may exceed device current limits.

802.11a/n/ac Transmit Turn ON Sequence (See Transmit Timing Diagram)

1. Turn ON power supply.
2. Turn ON PA_EN.
3. Turn ON SW_CTL.
4. Apply RF.

802.11a/n/ac Transmit Turn OFF Sequence

1. Turn OFF RF.
2. Turn OFF SW_CTL.
3. Turn OFF PA_EN.
4. Turn OFF power supply.

802.11a/n/ac Receive

1. To receive WiFi set the switch control lines per the truth table.
2. Antenna port is input and RX port is output for this test.
3. Follow Timing Diagram for biasing instructions.

Pin Names and Descriptions

Pin	Name	Description
1	NC	This pin is not connected internally and can be left floating but is recommended to connect to ground.
2	VCC2	Supply voltage for the PA. See applications schematic for biasing and bypassing components.
3	VCC1	Supply voltage for the PA. See applications schematic for biasing and bypassing components.
4	GND	Ground Connection. This pin is not connected internally and can be left floating or connected to ground.
5	TX	RF input port for the 802.11a/n/ac PA. Input is matched to 50Ω and DC blocked internally
6	GND	Ground Connection. This pin is not connected internally and can be left floating or connected to ground.
7	PA_EN	Control voltage for the PA. See "Switch Control Truth Table" for proper settings.
8	GND	No Connect. This pin is not connected internally and can be left floating or connected to ground.
9	VBAT	Supply voltage for the LNA, Switch & Bias Regulator. See applications schematic for biasing and bypassing components.
10	GND	Ground Connection. This pin is not connected internally and can be left floating or connected to ground.
11	RX	RF output port for the 802.11a/n/ac LNA. This port is matched to 50Ω and DC blocked internally.
12	LNA_EN	Control voltage for the LNA. When this pin is set to a LOW logic state, the bypass mode is enabled.
13	SW_CTL	Switch control voltage. High control voltage turns ON the TX path and low control voltage turns on the RX path (see "Switch Control Truth Table")
14	GND	Ground Connection. This pin is not connected internally and can be left floating or connected to ground.
15	ANT	RF bidirectional antenna port matched to 50Ω.
16	GND	Ground Connection. This pin is not connected internally and can be left floating or connected to ground.
Pkg Base	GND	Ground connection. The backside of the package should be connected to the ground plane through a short path, i.e., PCB vias under the device are recommended.
