

ALM-32120

0.7GHz – 1.0GHz

2 Watt High Linearity Amplifier

Data Sheet

Description

Avago Technologies' ALM-32120 is a high linearity 2 Watt PA with good OIP3 performance and exceptionally good PAE at 1dB gain compression point, achieved through the use of Avago Technologies' proprietary 0.25um GaAs Enhancement-mode pHEMT process.

All matching components are fully integrated within the module. This makes the ALM-32120 extremely easy to use. The adjustable temperature-compensated internal bias circuit allows the device to be operated at either class A or class AB operation. The ALM-32120 is housed inside a miniature 7.0 x 10.0 x 1.1 mm³ 20-lead multiple-chips-on-board (MCOB) module package.

"32120" = Device Part Number
"WWYY" = Work week and year of manufacture
"XXXX" = Last 4 digit of lot number

Features

- Fully matched, input and output
- High linearity and P1dB
- Unconditionally stable across load condition
- Built-in adjustable temperature compensated internal bias circuitry
- GaAs E-pHEMT Technology^[1]
- 5V supply
- Excellent uniformity in product specifications
- Tape-and-Reel packaging option available
- MSL-3 and Lead-free
- High MTTF for base station application

Specifications

900MHz; 5V, 800mA (typical)

- 14.3 dB Gain
- 52.0 dBm Output IP3
- 34.4 dBm Output Power at 1dB Gain Compression
- 50.3% PAE at P1dB
- 2.5dB Noise Figure

Applications

- Class A driver amplifier for GSM / W-CDMA / WiMAX base stations.
- General purpose gain block.

Note:

1. Enhancement mode technology employs positive gate voltage, thereby eliminating the need of negative gate voltage associated with conventional depletion mode devices.
2. Good RF practice requires all unused pins to be earthed.

Attention: Observe precautions for handling electrostatic sensitive devices.
