

MS5837-02BA01

Ultra-Small Gel Filled Pressure Sensor

SPECIFICATIONS

- **Ceramic - metal package, 3.3 x 3.3 x 2.75mm**
- **High-resolution module, 13 cm**
- **Supply voltage: 1.5 to 3.6 V**
- **Fast conversion down to 0.5 ms**
- **Low power, 0.6 μ A (standby \leq 0.1 μ A at 25°C)**
- **Integrated digital pressure sensor (24 bit $\Delta\Sigma$ ADC)**
- **Operating range: 300 to 1200 mbar, -20 to +85 °C**
- **I²C interface**
- **No external components (internal oscillator)**
- **Sealing designed for 1.8 x 0.8mm O-ring**

The MS5837 is an ultra-compact micro altimeter. It is optimized for altimeter and barometer applications. The altitude resolution at sea level is 13 cm of air.

The sensor module includes a high-linearity pressure sensor and an ultra-low power 24 bit $\Delta\Sigma$ ADC with internal factory-calibrated coefficients. It provides a precise digital 24-bit pressure and temperature value and different operation modes that allow the user to optimize for conversion speed and current consumption. A high-resolution temperature output allows the implementation of an altimeter/thermometer function without any additional sensor. The MS5837 can be interfaced to any microcontroller with I²C-bus interface. The communication protocol is simple, without the need of programming internal registers in the device. This new sensor module generation is based on leading MEMS technology and latest benefits from MEAS Switzerland proven experience and know-how in high volume manufacturing of altimeter modules, which has been widely used for over a decade.

FIELD OF APPLICATION

Fitness trackers
Mobile altimeter / barometer systems
Bike computers
Personal navigation devices

PRESSURE AND TEMPERATURE CALCULATION

GENERAL

The MS5837 consists of a piezo-resistive sensor and a sensor interface integrated circuit. The main function of the MS5837 is to convert the uncompensated analogue output voltage from the piezo-resistive pressure sensor to a 24-bit digital value, as well as providing a 24-bit digital value for the temperature of the sensor.

FACTORY CALIBRATION

Every module is individually factory calibrated at two temperatures and two pressures. As a result, 6 coefficients necessary to compensate for process variations and temperature variations are calculated and stored in the 112-bit PROM of each module. These bits (partitioned into 6 coefficients) must be read by the microcontroller software and used in the program converting D1 and D2 into compensated pressure and temperature values.

COMMUNICATION INTERFACE

The MS5837 has been built with I²C serial interface.

Module ref	Mode	Pins used
MS5837-02BA01	I ² C	SDA, SCL

The external microcontroller clocks in the data through the input SCL (Serial CLock) and SDA (Serial DAta). The sensor responds on the same pin SDA which is bidirectional for the I²C bus interface. So this interface type uses only 2 signal lines and does not require a chip select.

PRESSURE AND TEMPERATURE CALCULATION

Start
 Maximum values for calculation results:
 $P_{MIN} = 10\text{mbar}$ $P_{MAX} = 2000\text{mbar}$
 $T_{MIN} = -40^{\circ}\text{C}$ $T_{MAX} = 85^{\circ}\text{C}$ $T_{REF} = 20^{\circ}\text{C}$

Read calibration data (factory calibrated) from PROM

Variable	Description Equation	Recommended variable type	Size ^[1] [bit]	Value		Example / Typical
				min	max	
C1	Pressure sensitivity $SENS_{T1}$	unsigned int 16	16	0	65535	46372
C2	Pressure offset OFF_{T1}	unsigned int 16	16	0	65535	43981
C3	Temperature coefficient of pressure sensitivity TCS	unsigned int 16	16	0	65535	29059
C4	Temperature coefficient of pressure offset TCO	unsigned int 16	16	0	65535	27842
C5	Reference temperature T_{REF}	unsigned int 16	16	0	65535	31553
C6	Temperature coefficient of the temperature TEMPSENS	unsigned int 16	16	0	65535	28165

Read digital pressure and temperature data

D1	Digital pressure value	unsigned int 32	24	0	16777216	6465444
D2	Digital temperature value	unsigned int 32	24	0	16777216	8077636

Calculate temperature

dT	Difference between actual and reference temperature ^[2] $dT = D2 - T_{REF} = D2 - C5 * 2^6$	signed int 32	25	-16776960	16777216	68
TEMP	Actual temperature (-40...85°C with 0.01°C resolution) $TEMP = 20^{\circ}\text{C} + dT * TEMPSENS = 2000 + dT * C6 / 2^{23}$	signed int 32	41	-4000	8500	2000 = 20.00 °C

Calculate temperature compensated pressure

OFF	Offset at actual temperature ^[3] $OFF = OFF_{T1} + TCO * dT = C2 * 2^{17} + (C4 * dT) / 2^6$	signed int 64	41	-17179344900	25769410560	5764707214
SENS	Sensitivity at actual temperature ^[4] $SENS = SENS_{T1} + TCS * dT = C1 * 2^{16} + (C3 * dT) / 2^7$	signed int 64	41	-8589672450	12884705280	3039050829
P	Temperature compensated pressure (10...1200mbar with 0.01mbar resolution) $P = D1 * SENS - OFF = (D1 * SENS / 2^{21} - OFF) / 2^{15}$	signed int 32	58	1000	120000	110002 = 1100.02 mbar

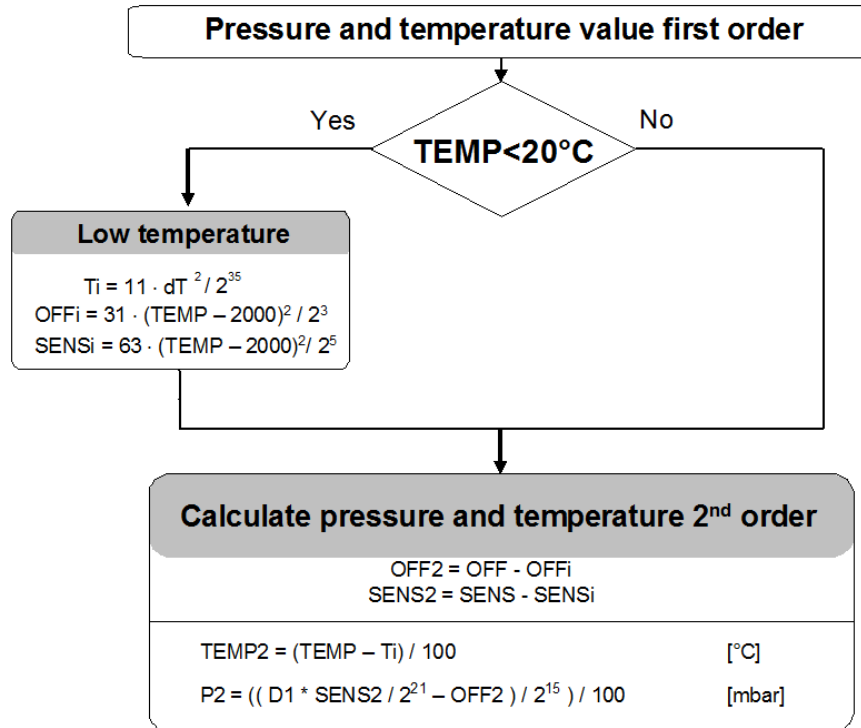

Pressure and temperature value first order

- Notes
- [1] Maximal size of intermediate result during evaluation of variable
 - [2] min and max have to be defined
 - [3] min and max have to be defined
 - [4] min and max have to be defined

Flow chart for pressure and temperature reading and software compensation

SECOND ORDER TEMPERATURE COMPENSATION

The results of the last first order calculation are entered in the following chart to obtain the pressure and temperature compensated with the 2nd order: P2 and TEMP2.

Flow chart for pressure and temperature to the optimum accuracy

I²C INTERFACE

COMMANDS

The MS5837 has only five basic commands:

1. Reset
2. Read PROM (112 bit of calibration words)
3. D1 conversion
4. D2 conversion
5. Read ADC result (24 bit pressure / temperature)

Each I²C communication message starts with the start condition and it is ended with the stop condition. The MS5837 address is 1110110x (write: x=0, read: x=1).

Size of each command is 1 byte (8 bits) as described in the table below. After ADC read commands, the device will return 24 bit result and after the PROM read 16 bit results. The address of the PROM is embedded inside of the PROM read command using the a2, a1 and a0 bits.

Bit number	Command byte								hex value
	0	1	2	3	4	5	6	7	
Bit name	PRO M	CO NV	-	Typ	Ad2/ Os2	Ad1/ Os1	Ad0/ Os0	Stop	
Command									
Reset	0	0	0	1	1	1	1	0	0x1E
Convert D1 (OSR=256)	0	1	0	0	0	0	0	0	0x40
Convert D1 (OSR=512)	0	1	0	0	0	0	1	0	0x42
Convert D1 (OSR=1024)	0	1	0	0	0	1	0	0	0x44
Convert D1 (OSR=2048)	0	1	0	0	0	1	1	0	0x46
Convert D1 (OSR=4096)	0	1	0	0	1	0	0	0	0x48
Convert D1 (OSR=8192)	0	1	0	0	1	0	1	0	0x4A
Convert D2 (OSR=256)	0	1	0	1	0	0	0	0	0x50
Convert D2 (OSR=512)	0	1	0	1	0	0	1	0	0x52
Convert D2 (OSR=1024)	0	1	0	1	0	1	0	0	0x54
Convert D2 (OSR=2048)	0	1	0	1	0	1	1	0	0x56
Convert D2 (OSR=4096)	0	1	0	1	1	0	0	0	0x58
Convert D2 (OSR=8192)	0	1	0	1	1	0	1	0	0x5A
ADC Read	0	0	0	0	0	0	0	0	0x00
PROM Read	1	0	1	0	Ad2	Ad1	Ad0	0	0xA0 to 0xAE

Command structure

RESET SEQUENCE

The Reset sequence shall be sent once after power-on to make sure that the calibration PROM gets loaded into the internal register. It can be also used to reset the device PROM from an unknown condition. The reset can be sent at any time. In the event that there is not a successful power on reset this may be caused by the SDA being blocked by the module in the acknowledge state. The only way to get the MS5837 to function is to send several SCLs followed by a reset sequence or to repeat power on reset.

PROM READ SEQUENCE

The read command for PROM shall be executed once after reset by the user to read the content of the calibration PROM and to calculate the calibration coefficients. There are in total 7 addresses resulting in a total memory of 112 bit. Addresses contain factory data and the setup, calibration coefficients, the serial code and CRC. The command sequence is 8 bits long with a 16 bit result which is clocked with the MSB first. The PROM Read command consists of two parts. First command sets up the system into PROM read mode. The second part gets the data from the system.

CONVERSION SEQUENCE

The conversion command is used to initiate uncompensated pressure (D1) or uncompensated temperature (D2) conversion. After the conversion, using ADC read command the result is clocked out with the MSB first. If the conversion is not executed before the ADC read command, or the ADC read command is repeated, it will give 0 as the output result. If the ADC read command is sent during conversion the result will be 0, the conversion will not stop and the final result will be wrong. Conversion sequence sent during the already started conversion process will yield incorrect result as well. A conversion can be started by sending the command to MS5837. When command is sent to the system it stays busy until conversion is done. When conversion is finished the data can be accessed by sending a Read command, when an acknowledge is sent from the MS5837, 24 SCL cycles may be sent to receive all result bits. Every 8 bits the system waits for an acknowledge signal.

I2C command to initiate a pressure conversion (OSR=4096, typ=D1)

I2C ADC read sequence

I2C answer from MS5837

CYCLIC REDUNDANCY CHECK (CRC)

MS5837 contains a PROM memory with 112-Bit. A 4-bit CRC has been implemented to check the data validity in memory.

A	D	D	D	D	D	D	D	D	D	D	D	D	D	D	D	D	D
d	B	B	B	B	B	B	B	B	B	B	B	B	B	B	B	B	B
d	5	4	3	2	1	0	9	8	7	6	5	4	3	2	1	0	
0	CRC				Factory defined												
1	C1																
2	C2																
3	C3																
4	C4																
5	C5																
6	C6																

Memory PROM mapping

C Code example for CRC-4 calculation:

```

unsigned char crc4(unsigned int n_prom[]) // n_prom defined as 8x unsigned int (n_prom[8])
{
    int cnt; // simple counter
    unsigned int n_rem=0; // crc remainder
    unsigned char n_bit;

    n_prom[0]=((n_prom[0]) & 0x0FFF); // CRC byte is replaced by 0
    n_prom[7]=0; // Subsidiary value, set to 0
    for (cnt = 0; cnt < 16; cnt++) // operation is performed on bytes
    { // choose LSB or MSB
        if (cnt%2==1) n_rem ^= (unsigned short) ((n_prom[cnt]>>1]) & 0x00FF);
        else n_rem ^= (unsigned short) (n_prom[cnt]>>1]>>8);
        for (n_bit = 8; n_bit > 0; n_bit--)
        {
            if (n_rem & (0x8000)) n_rem = (n_rem << 1) ^ 0x3000;
            else n_rem = (n_rem << 1);
        }
    }
    n_rem= ((n_rem >> 12) & 0x000F); // final 4-bit remainder is CRC code
    return (n_rem ^ 0x00);
}
    
```

MS5837-02BA01

Ultra-Small Gel Filled Pressure Sensor

APPLICATION CIRCUIT

The MS5837 is a circuit that can be used in conjunction with a microcontroller in mobile altimeter applications.

- 1: Measured from centerline of sprocket hole to centerline of pocket
- 2: Cumulative tolerance of 10 sprocket holes is ± 0.2 mm
- 3: Measured from centerline of sprocket hole to centerline of pocket

MOUNTING AND ASSEMBLY CONSIDERATIONS

SOLDERING

Please refer to the application note AN808 available on our website for soldering recommendations.

MOUNTING

The MS5837 can be placed with automatic Pick & Place equipment using vacuum nozzles. It will not be damaged by the vacuum. Due to the low stress assembly the sensor does not show pressure hysteresis effects. It is important to solder all contact pads.

CONNECTION TO PCB

The package outline of the module allows the use of a flexible PCB for interconnection. This can be important for applications in watches and other special devices.

SEALING WITH O-RINGS

In applications such as outdoor watches the electronics must be protected against direct water or humidity. For such applications the MS5837 provides the possibility to seal with an O-ring. The O-ring shall be placed at the groove location, i.e. the small outer diameter of the metal lid. The following O-ring / housing dimensions are recommended:

O-ring inner diameter	1.8 ± 0.05 mm
O-ring cross-section diameter	0.8 ± 0.03 mm
Housing bore diameter	3.07 ± 0.03 mm

Please refer to the application note AN523 available on our website for O-ring mounting recommendations.

CLEANING

The MS5837 has been manufactured under clean-room conditions. It is therefore recommended to assemble the sensor under class 10'000 or better conditions. Should this not be possible, it is recommended to protect the sensor opening during assembly from entering particles and dust. To avoid cleaning of the PCB, solder paste of type "no-clean" shall be used. Warning: cleaning might damage the sensor.

ESD PRECAUTIONS

The electrical contact pads are protected against ESD. It is therefore essential to ground machines and personnel properly during assembly and handling of the device. The MS5837 is shipped in antistatic transport boxes. Any test adapters or production transport boxes used during the assembly of the sensor shall be of an equivalent antistatic material.

DECOUPLING CAPACITOR

Particular care must be taken when connecting the device to the power supply. A 100nF minimum ceramic capacitor must be placed as close as possible to the MS5837 VDD pin. This capacitor will stabilize the power supply during data conversion and thus, provide the highest possible accuracy.
