Unlocking Measurement Insights

WLAN 802.11a/b/g/j/p/n/ac/af/ah Measurement Application

The WLAN measurement application transforms the X-Series signal analyzers into IEEE 802.11 standard-based WLAN transmitter testers by adding fast, one-button RF conformance measurements that will help you design, evaluate, and manufacture your WLAN transmitter. The software's capabilities are further enhanced because it is closely aligned with the IEEE standards– including 802.11a/b/g/j/p/n/ac/af and 802.11ah–allowing you to stay on the leading edge of design and manufacturing challenges.

X-Series measurement applications

X-Series measurement applications increase the capability and functionality of Keysight Technologies, Inc. signal analyzers to speed time to insight. They provide essential measurements for specific tasks in general-purpose, cellular communications, wireless connectivity and digital video applications, covering established standards and modulation types. Applications are supported across X-Series analyzers, with the only difference being the level of performance achieved by the hardware you select.

Real-time spectrum analysis for WLAN 802.11

Adding real-time spectrum analysis to a PXA or MXA signal analyzer addresses the measurement challenges associated with dynamic RF signals such as bursted packet transmissions of WLAN, and to identify interference caused by various signals in the ISM (2.4 or 5 GHz) bands.

- Accurately observe power changes for an 802.11 signal within a 160-MHz real-time bandwidth
- Capture random interfering signals with durations as short as 3.57 µs in ISM bands for WLAN signals
- Perform fast, wideband measurements without compromising EVM, ACPR and other RF measurements
- Enhance dynamic range with 1-dB variable attenuation (< 3.6 GHz) and fine-adjustable resolution bandwidths

RF Transmitter Tests

By using the X-Series signal analyzers with the WLAN measurement application, you can perform WLAN transmitter measurements in the time, frequency, and modulation domains. IEEE 802.11a,b,g, j, p signals, 802.11ah 1/2/4/8/16 MHz signals 802.11n 20 MHz and 40 MHz signals, 802.11af 6/7/8MHz, as well as 802.11ac 20/40/80/160 MHz and 80+80 MHz signals with all modulation formats, as shown in Tables 3-5, respectively, can be measured automatically.

Standard-based RF transmitter tests

RF transmitter test requirements for WLAN are defined in the IEEE 802.11 series standard. Table 3 shows the required transmitter tests along with the corresponding measure-ment applications.

Test reference numbers starting with 17 apply to 802.11a, those that start with 18 apply to 802.11b, and those starting with 19 apply to 802.11g, as well as some 802.11a and 802.11b items, due to forward compatibility requirements. Table 4 and Table 5 show the requirements for 802.11n and 802.11ac single-channel with test reference numbers that start with 20 and 22. 802.11ah is defined in reference number starting from 24.

Software licensing and configuration

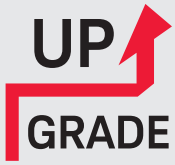
Choose from two license types:

- Fixed, perpetual license:
  This allows you to run the application in the X-Series analyzer in which it is initially installed.
- Transportable, perpetual license:
  This allows you to run the application in the X-Series analyzer in which it is initially installed, plus it may be transferred from one X-Series analyzer to another.

You can upgrade!

Options can be added after your initial purchase.

All of our X-Series application options are license-key upgradeable.



The table below contains information on our fixed, perpetual licenses. For more information, please visit the product web pages.
