Notes:

1. Load regulation is measured for an output change of 0% to 100% at nominal input line.
2. Operation at no-load will not damage these units. However, they may not meet all specifications.
3. Output short circuit protection is provided by a "hiccup mode" circuit. The unit recovers automatically when the fault condition is removed.
4. Output overload protection is provided by a fold back current limiting circuit.
5. It is recommended that an external slow blow fuse also be used on the input for protection. See the table above for the correct rating.
