

### High Precision Foil Resistor with TCR of $\pm 2.0$ ppm/°C, Tolerance of $\pm 0.01$ % and Load Life Stability of $\pm 0.005$ % CECC Qualified

#### INTRODUCTION

Bulk Metal® Foil (BMF) technology outperforms all other resistor technologies available today for applications that require high precision and high stability.

This technology has been pioneered and developed by VISHAY, and products based on this technology are the most suitable for a wide range of applications. BMF technology allows us to produce customer orientated products, designed to satisfy challenging and specific technical requirements.

Models RS92N, RS92NA, and AN made from Vishay BMF offers low TCR, excellent load life stability, tight tolerance, fast response time, low current noise, low thermal EMF and low voltage coefficient, all in one resistor.

The RS92N, RS92NA, and AN are virtually insensitive to destabilizing factors. The resistor element is a solid alloy that displays the desirable bulk properties of its parent material, thus it is inherently stable and noise free.

Vishay's Bulk Metal® RS92N, RS92NA, and AN resistors are the modern generation of precision resistors. The standard design of these resistors provides a unique combination of characteristics found in no other single resistor.

Our Application Engineering Department is available to advise and to make recommendations. For non-standard technical requirements and special applications, please contact us.

**TABLE 1 - TOLERANCE AND TCR VS. RESISTANCE VALUE**  
(- 55 °C to + 155 °C, + 20 °C Ref.)

| RESISTANCE VALUE<br>( $\Omega$ ) | TOLERANCE<br>(%) | TYPICAL TCR AND MAX. SPREAD<br>(ppm/°C) |
|----------------------------------|------------------|-----------------------------------------|
| 80.6 to 120K                     | $\pm 0.01$       | $\pm 2 \pm 3$                           |

**TABLE 2 - MECHANICAL AND ENVIRONMENTAL SPECIFICATIONS**

|                       |                     |
|-----------------------|---------------------|
| Mechanical Protection | Insulated case      |
| Resistive Element     | Nickel-chromium     |
| Unit Weight           | 0.3 g               |
| Temperature Limits    | - 55 °C to + 155 °C |
| Climatic Category     | 55/155/56           |

#### FEATURES

- Temperature coefficient of resistance (TCR):  $\pm 2$  ppm/°C typical (- 55 °C to + 155 °C, ref. + 20 °C)
- Rated power: to 0.25 W at + 125 °C
- Tolerance:  $\pm 0.01$  %
- Load life stability: to  $\pm 0.005$  % at 70 °C, 2000 h at rated power
- Resistance range: 80.6  $\Omega$  to 120 k $\Omega$  (higher or lower values of resistance are available)
- Electrostatic discharge up to 25 000 V
- Non inductive, non capacitive design
- Rise time: 1 ns effectively no ringing
- Current noise: < - 40 dB
- Thermal EMF: 0.05  $\mu$ V/°C typical
- Voltage coefficient: < 0.1 ppm/V
- Low inductance: < 0.08  $\mu$ H typical
- Non hot spot design
- Terminal finishes available: tin/lead alloy
- Matched sets are available per request (TCR Tracking: to 0.5 ppm/°C)
- For better TCR and PCR performances please review the [RNC90Z](#) and [Z555](#) datasheets

#### APPLICATIONS

- High precision amplifiers
- Down-hole (high temperature)
- High precision instrumentation
- Medical and test equipment
- Industrial
- Audio (high end stereo equipment)
- EB applications (electron beam scanning and recording equipment, electron microscopes)
- Military, airborne
- Measurement instrumentation

**FIGURE 1 - STANDARD IMPRINTING AND DIMENSIONS**

**Note**

- The standoffs shall be so located as to give a lead clearance of 0.010" minimum between the resistor body and the printed circuit board when the standoffs are seated on the printed circuit board. This is to allow for proper cleaning of flux and other contaminants from the unit after all soldering processes.
