**Stacked Multi-Chip Product (MCP)
256 Megabit (16M x 16-bit) CMOS 1.8 Volt-only
Simultaneous Read/Write, Burst-mode Flash Memory
with 128 Mb (8M x 16-Bit) RAM Type 4 and
512 Mb (32M x 16-bit) Data Flash or 1 Gb ORNAND Flash**

Data Sheet

PRELIMINARY

Notice to Readers: This document indicates states the current technical specifications regarding the SpanSion product(s) described herein. The Preliminary status of this document indicates that a product qualification has been completed, and that initial production has begun. Due to the phases of the manufacturing process that require maintaining efficiency and quality, this document may be revised by subsequent versions or modifications due to changes in technical specifications.

Notice On Data Sheet Designations

SpanSion LLC issues data sheets with Advance Information or Preliminary designations to advise readers of product information or intended specifications throughout the product life cycle, including development, qualification, initial production, and full production. In all cases, however, readers are encouraged to verify that they have the latest information before finalizing their design. The following descriptions of SpanSion data sheet designations are presented here to highlight their presence and definitions.

Advance Information

The Advance Information designation indicates that SpanSion LLC is developing one or more specific products, but has not committed any design to production. Information presented in a document with this designation is likely to change, and in some cases, development on the product may discontinue. SpanSion LLC therefore places the following conditions upon Advance Information content:

"This document contains information on one or more products under development at SpanSion LLC. The information is intended to help you evaluate this product. Do not design in this product without contacting the factory. SpanSion LLC reserves the right to change or discontinue work on this proposed product without notice."

Preliminary

The Preliminary designation indicates that the product development has progressed such that a commitment to production has taken place. This designation covers several aspects of the product life cycle, including product qualification, initial production, and the subsequent phases in the manufacturing process that occur before full production is achieved. Changes to the technical specifications presented in a Preliminary document should be expected while keeping these aspects of production under consideration. SpanSion places the following conditions upon Preliminary content:

"This document states the current technical specifications regarding the SpanSion product(s) described herein. The Preliminary status of this document indicates that product qualification has been completed, and that initial production has begun. Due to the phases of the manufacturing process that require maintaining efficiency and quality, this document may be revised by subsequent versions or modifications due to changes in technical specifications."

Combination

Some data sheets will contain a combination of products with different designations (Advance Information, Preliminary, or Full Production). This type of document will distinguish these products and their designations wherever necessary, typically on the first page, the ordering information page, and pages with DC Characteristics table and AC Erase and Program table (in the table notes). The disclaimer on the first page refers the reader to the notice on this page.

Full Production (No Designation on Document)

When a product has been in production for a period of time such that no changes or only nominal changes are expected, the Preliminary designation is removed from the data sheet. Nominal changes may include those affecting the number of ordering part numbers available, such as the addition or deletion of a speed option, temperature range, package type, or V_{IO} range. Changes may also include those needed to clarify a description or to correct a typographical error or incorrect specification. SpanSion LLC applies the following conditions to documents in this category:

"This document states the current technical specifications regarding the SpanSion product(s) described herein. SpanSion LLC deems the products to have been in sufficient production volume such that subsequent versions of this document are not expected to change. However, typographical or specification corrections, or modifications to the valid combinations offered may occur."

Questions regarding these document designations may be directed to your local AMD or Fujitsu sales office.

S75WS-N Based MCPs

Stacked Multi-Chip Product (MCP)

256 Megabit (16M x 16-bit) CMOS 1.8 Volt-only

Simultaneous Read/Write, Burst-mode Flash Memory with

128 Mb (8M x 16-Bit) RAM Type 4 and

512 Mb (32M x 16-bit) Data Flash or 1Gb ORNAND Flash

Data Sheet

PRELIMINARY

General Description

The S75WS-N Series is a product line of stacked Multi-Chip Product (MCP) packages and consists of the following items:

- One or more S29WS-N code Flash
- RAM Type 4
- One or more S29WS-N data Flash, or one or more S30MS-P ORNAND Flash

The products covered by this document are listed in the table below:

Device	Code Flash Density	RAM Density		NOR Data Flash Density	ORNAND Data Flash Density
	256 Mb	128 Mb	256 Mb	512 Mb	1024 Mb
S75WS256NDF	■	■		■	
S75WS256NEG	■		■		■

Distinctive Characteristics

MCP Features

- Power supply voltage of 1.7 V to 1.95 V
- High Performance
 - 54 MHz, 66 Mhz, 80 MHz
- Packages
 - 9 x 12 mm 84 ball FBGA
 - 11 x 13 mm 115 ball FBGA
- Operating Temperature
 - Wireless, -25°C to +85°C

2 Ordering Information

The ordering part number is formed by a valid combination of the following:

S75WS	256	N	D	F	BA	W	L	K	0	
										Packing Type
										0 = Tray
										2 = 7" Tape and Reel
										3 = 13" Tape and Reel
										RAM Supplier; Speed Combination
										K = RAM Type 4, 54 MHz
										J = RAM Type 4, 66 MHz
										H = RAM Type 4, 80 MHz
										Package Dimensions and Ball Count; DYB Power Up; Flash Device Family (Data Storage)
										L = 1.4 mm, 9 x 12, 84 ball; 0, WS as Data Flash
										N = 1.4 mm, 9 x 12, 84 ball; 1, WS as Data Flash
										U = 1.4mm, 11x13, 115-ball, x16 ORNAND Data Flash
										S = 1.4mm, 11x13, 115-ball, x8 ORNAND Data Flash
										Temperature Range
										W = Wireless (-25°C to +85°C)
										Package Type And Material
										BA = Very Thin Fine-Pitch Ball Grid Array (BGA), Lead (Pb)-free Compliant Package
										BF = Very Thin Fine-Pitch Ball Grid Array (BGA), Lead (Pb)-free Package
										Data Flash Density
										F = 512 Mb
										G = 1024 Mb
										RAM Density
										D = 128 Mb
										E = 256 Mb
										Process Technology
										N = 110 nm, Mirror Bit Technology
										Code Flash Density
										256 = 256 Mb
										Device Family
										S75WS = Multi-chip Product (MCP)
										1.8-volt Burst Mode Flash Memory, RAM, and data flash

Table 2.1 MCP Configurations and Valid Combinations

Valid Combination							
S75WS256N	D	F	BA, BF	W	L, N	K, H	

Table 2.2 ORNAND Configurations and Valid Combinations

Valid Combination							
S75WS256N	E	G	BA, BF	W	U, S	K, J, H	

Package Marking Note:

The BGA package marking omits the leading S75 and packing type designator from the ordering part number.

Valid Combinations

Valid Combinations list configurations planned to be supported in volume for this device. Consult your local sales office to confirm availability of specific valid combinations and to check on newly released combinations.

3 Input/Output Descriptions

Table 3.1 identifies the input and output package connections provided on the device.

Table 3.1 NOR Flash and RAM Input/Output Descriptions

Symbol	Description	
A _{max} – A0	Address Inputs	(Common)
DQ15 - DQ0	Data Inputs/Outputs	
OE#	Output Enable input	
WE#	Write Enable input	
V _{SS}	Ground	
NC	No Connect; not connected internally.	
RDY	Ready output. Indicates the status of the Burst read.	(Flash)
CLK	Clock input. In burst mode, after the initial word is output, subsequent active edges of CLK increment the internal address counter. Should be at V _{IL} or V _{IH} while in asynchronous mode.	(Common)
AVD#	Address Valid input. Indicates to device that the valid address is present on the address inputs.	(Flash)
F-RST#	Hardware reset input.	
F-WP#	Hardware write protect input. At V _{IL} , disables program and erase functions in the four outermost sectors. Should be at V _{IH} for all other conditions.	
F-ACC	Accelerated input. At V _{IH} , accelerates programming; automatically places device in unlock bypass mode. At V _{IL} , disables all program and erase functions. Should be at V _{IH} for all other conditions.	
R-CE#	Chip-enable input for pSRAM	
F1-CE#	Chip-enable input for Code Flash.	Asynchronous relative to CLK for Burst Mode.
F2-CE#	Chip-enable input for Data Flash 1.	
F2-CE#	Chip-enable input for Data Flash 2.	
R-MRS#	Control Register Enable.	(pSRAM – RAM Type 4 only)
F-V _{CC}	Flash 1.8 Volt-only single power supply.	
R-V _{CC}	pSRAM Power Supply.	
R-UB#	Upper Byte Control.	(pSRAM)
R-LB#	Lower Byte Control .	

Table 3.2 identifies the ORNAND input and output connections provided on the device.

Table 3.2 ORNAND Flash Input/Output Descriptions

Symbol	Description
N-PRE	ORNAND Power-On Read Enable. Tie to V _{SS} on customer board if not used.
N-ALE	ORNAND Address Latch Enable
N-CLE	ORNAND Command Latch Enable
N-CE#	ORNAND Chip-enable
N-WP#	ORNAND Write-protect
N-WE#	ORNAND Write-enable
N-RE#	ORNAND Read-enable
N-RY/BY#	ORNAND Ready-Busy—this is shared with NOR RDY
N-I/O0-N-I/O15	ORNAND I/O signals (I/O0-I/O7 for x8 bus width)
N-V _{CC}	ORNAND Power supply

4 MCP Block Diagram

Notes:

1. MRS is only present in RAM Type 4.
2. CE#f1, CE#f2, and CE#f3 are the chip enable pins for the first, second and third Flash devices, respectively.

Figure 4.2 ORNAND Block Diagram

5 Connection Diagrams/Physical Dimensions

This section contains the I/O designations and package specifications for the S75WS.

5.1 Special Handling Instructions for FBGA Package

Special handling is required for Flash Memory products in FBGA packages.

Flash memory devices in FBGA packages may be damaged if exposed to ultrasonic cleaning methods. The package and/or data integrity may be compromised if the package body is exposed to temperatures above 150°C for prolonged periods of time.

5.2 Connection Diagram – NOR Flash & 1.8 V RAM Type 4 Based Pinout, 9 x 12 mm

5.3 Connection Diagram – ORNAND-Based Pinout, 11 x 13 mm

Note: Bus 1: NOR Flash + pSRAM, Bus 2: ORNAND Flash

5.4 Physical Dimensions – FEA084 – Fine Pitch Ball Grid Array 9 x 12 mm

PACKAGE	FEA 084			NOTE

NOTES:

- DIMENSIONING AND TOLERANCING METHODS PER ASME Y14.5M-1994.
- ALL DIMENSIONS ARE IN MILLIMETERS.
- BALL POSITION DESIGNATION PER JESD 95-1, SPP-010.
- [e] REPRESENTS THE SOLDER BALL GRID PITCH.
- SYMBOL "MD" IS THE BALL MATRIX SIZE IN THE "D" DIRECTION.
SYMBOL "ME" IS THE BALL MATRIX SIZE IN THE "E" DIRECTION.
n IS THE NUMBER OF POPULATED SOLDER BALL POSITIONS FOR MATRIX SIZE MD X ME.
- DIMENSION "b" IS MEASURED AT THE MAXIMUM BALL DIAMETER IN A PLANE PARALLEL TO DATUM C.
- SD AND SE ARE MEASURED WITH RESPECT TO DATUMS A AND B AND DEFINE THE POSITION OF THE CENTER SOLDER BALL IN THE OUTER ROW.
- WHEN THERE IS AN ODD NUMBER OF SOLDER BALLS IN THE OUTER ROW SD OR SE = 0.000.
- WHEN THERE IS AN EVEN NUMBER OF SOLDER BALLS IN THE OUTER ROW, SD OR SE = [e/2]
- "+" INDICATES THE THEORETICAL CENTER OF DEPOPULATED BALLS.
- N/A
- A1 CORNER TO BE IDENTIFIED BY CHAMFER, LASER OR INK MARK, METALLIZED MARK INDENTATION OR OTHER MEANS.

Added the FND115 package diagram

S29WS-N Flash Module

Removed from MCP. Available as a standalone document.

1.8 V Type 4 pSRAM Module

Removed from MCP. Available as a standalone document.

Colophon

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (I) for any use that includes fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for any use where chance of failure is intolerable (i.e., submersible repeater and artificial satellite). Please note that Spansion LLC will not be liable to you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products. Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions. If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the US Export Administration Regulations or the applicable laws of any other country, the prior authorization by the respective government entity will be required for export of those products.

Trademarks and Notice
