Smart High-Side NMOS-Power Switch

Data Sheet

Rev 1.0, 2012-09-01

Standard Power

1 Overview

Features

- CMOS compatible input
- Switching all types of resistive, inductive and capacitive loads
- Fast demagnetization of inductive loads
- Very low standby current
- Optimized Electromagnetic Compatibility (EMC)
- Open drain diagnostic output for overtemperature and short circuit
- Open load detection in OFF-state with external resistor
- Overload protection
- Current limitation
- Short circuit protection
- Thermal shutdown with restart
- Overvoltage protection (including load dump)
- Reverse battery protection with external resistor
- Loss of GND and loss of V_{bb} protection
- Electrostatic Discharge Protection (ESD)
- Green Product (RoHS compliant)

ITS4300S-SJ-D is not qualified and manufactured according to the requirements of Infineon Technologies with regards to automotive and/or transportation applications.

Description

The ITS4300S-SJ-D is a protected single channel Smart High-Side NMOS-Power Switch in a PG-DSO-8 package with charge pump, CMOS compatible input and diagnostic feedback.

Product Summary

Overvoltage protection $V_{SAZmin} = 41V$
 Operating voltage range: $5V < V_S < 34V$
 On-state resistance $R_{DSON} = \text{typ } 300m\Omega$
 Nominal load current $I_{LNOM} = 0.4A$
 Operating Temperature range: $T_j = -40^\circ C$ to $125^\circ C$
 Standby Current: $I_{SSTB} = 26\mu A$

Application

- All types of resistive, inductive and capacitive loads
- Power switch for 12V and 24V DC applications with CMOS compatible control interface
- Driver for electromagnetic relays
- Power management for high-side-switching with low current consumption in OFF-mode

1) Not subject to production test, specified by design

2) Device on 50mm*50mm*1.5mm epoxy PCB FR4 with 6 cm² (one layer, 70mm thick) copper area for V_{bb} connection. PCB is vertical without blown air

3) Not subject to production test, specified by design

4) ESD susceptibility HBM according to EIA/JESD 22-A 114.

Note: Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as “outside” the normal operating range. Protection functions are neither designed for continuous nor repetitive operation.

- 1) Device on 50mm x 50mm x 1,5mm epoxy FR4 PCB with 6cm² (one layer copper 70um thick) copper area for supply voltage connection. PCB in vertical position without blown air.
- 2) Timing values only with high slewrate input signal; otherwise slower.
- 3) Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as "outside" normal operating range. Protection functions are not designed for continuous repetitive operation.

Electrical Characteristics

- 4) Requires a 150 Ω resistor in GND connection. The reverse load current through the intrinsic drain-source diode of the power-MOS has to be limited by the connected load. Power dissipation is higher compared to normal operation due to the voltage drop across the drain-source diode. The temperature protection is not functional during reverse current operation! Input current has to be limited (see max ratings).
- 5) No delay time after overtemperature switch off and short circuit in on-state.
- 6) External pull up resistor required for open load detection in off state.
- 7) External pull up resistor required for open load detection in off state.

7 Application Information

7.1 Application Diagram

The following information is given as a hint for the implementation of the device only and shall not be regarded as a description or warranty for a certain functionality, condition or quality of the device.

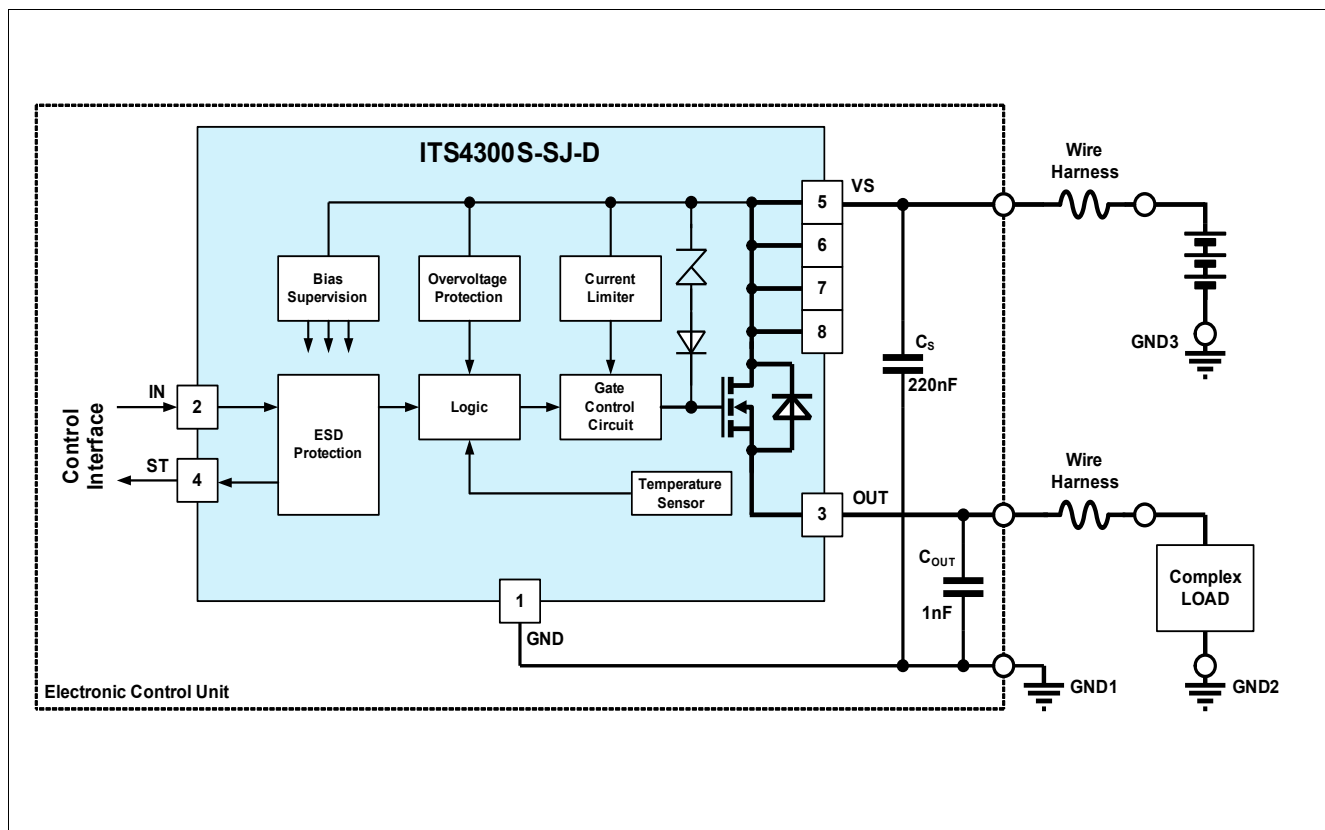

Figure 4 Application Diagram

The ITS4300S-SJ-D can be connected directly to a supply network. It is recommended to place a ceramic capacitor (e.g. $C_S = 220\text{nF}$) between supply and GND to avoid line disturbances. Wire harness inductors/resistors are sketched in the application circuit above.

The complex load (resistive, capacitive or inductive) must be connected to the output pin OUT.

A built-in current limit protects the device against destruction.

The ITS4300S-SJ-D can be switched on and off with standard logic ground related logic signal at pin IN.

In standby mode (IN=L) the ITS4300S-SJ-D is deactivated with very low current consumption.

The output voltage slope is controlled during on and off transition to minimize emissions. Only a small ceramic capacitor $C_{OUT}=1\text{nF}$ is recommended to attenuate RF noise.

In the following chapters the main features, some typical waveforms and the protection behaviour of the ITS4300S-SJ-D is shown. For further details please refer to application notes on the Infineon homepage.

7.2 Diagnosis Description

For diagnostic purpose the device provides a digital output pin ST in order to indicate fault conditions.

The status output (ST) of the ITS4300S-SJ-D is a high voltage open drain output.

In “normal” operation mode the NMOS open drain transistor is switched OFF.

The following truth table defines the status output.

Table 5 Truth Table of diagnosis feature

Device Operation	IN	OUT	ST	Comment
Normal Operation	H	H	H	
Short circuit to GND	L	L	H	No diagnosis
Short circuit to GND	H	L	L	OUT=L: $V_{OUT} < V_{OUTSC}$; Short circuit detection voltage; typ 2.8V
