## Functional Block Diagram

## General Description

Qorvo's TGM2635-CP is a packaged X-band, high power amplifier fabricated on Qorvo's production 0.25um GaN on SiC process. The TGM2635-CP operates from 7.9–11 GHz and provides 100 W of saturated output power with 22.5 dB of large signal gain and greater than 35 % power-added efficiency.

The TGM2635-CP is packaged in a 10-lead 19.05 x 19.05 mm bolt-down package with a pure Cu base for superior thermal management. Both RF ports are internally DC blocked and matched to 50 ohms allowing for simple system integration.

The TGM2635-CP is ideally suited for both military and commercial X-Band radar systems, satellite communications systems, and data links.

Lead-free and RoHS compliant.

Evaluation boards are available upon request.
