300Mbps Wireless PoE Access Point

The LevelOne WAP-6110 is a wireless PoE access point that offers home and office users 802.11n technology at a competitive price. With wireless speeds of up to 300Mbps, it offers big improvements on legacy 11g devices for users who want to surf the net, stream videos and conduct large file transfers all at the same time. It also features PoE capability for easy deployment within a PoE enabled network.

For standard operations, the WAP-6110 connects to a LAN, broadband ADSL router or network switch and provides instant network access to connected wireless clients. Supports AP, client, WDS, and Repeater modes for customized wireless deployments.

In WDS mode, WAP-6110 acts as a wireless bridge/Access Point hybrid for connecting to two separate wireless networks simultaneously. This provides greater access to network resources for more users. In Repeater mode, it allows extended coverage and greater signal strength for greatly improved wireless network (WLAN) range. The WAP-6110nhandles simultaneous wireless traffic easily and efficiently.
