## TABLE OF CONTENTS

|                                                                          |            |
|--------------------------------------------------------------------------|------------|
| <b>1 GENERAL DESCRIPTION .....</b>                                       | <b>13</b>  |
| <b>2 FEATURES.....</b>                                                   | <b>14</b>  |
| 2.1 M031/M032 Features .....                                             | 14         |
| <b>3 PARTS INFORMATION .....</b>                                         | <b>22</b>  |
| 3.1 Package Type .....                                                   | 22         |
| 3.2 M031/M032 Series Selection Guide .....                               | 23         |
| 3.2.1 M031 Base Series (M031Fx / M031Ex / M031Tx) .....                  | 23         |
| 3.2.2 M031 Base Series (M031Lx).....                                     | 24         |
| 3.2.3 M031 Base Series (M031Sx) .....                                    | 25         |
| 3.2.4 M031 Base Series (M031Kx) .....                                    | 26         |
| 3.2.5 M032 USB Series (M032Fx / M032Ex / M032Tx) .....                   | 27         |
| 3.2.6 M032 USB Series (M032Lx).....                                      | 28         |
| 3.2.7 M032 USB Series (M032Sx) .....                                     | 29         |
| 3.2.8 M032 USB Series (M031Kx) .....                                     | 30         |
| 3.2.9 Naming Rule .....                                                  | 31         |
| 3.3 M031/M032 Series Feature Comparison Table.....                       | 32         |
| <b>4 PIN CONFIGURATION.....</b>                                          | <b>34</b>  |
| 4.1 Pin Configuration.....                                               | 34         |
| 4.1.1 M031 Series Pin Diagram .....                                      | 34         |
| 4.1.2 M031 Series Multi-function Pin Diagram .....                       | 40         |
| 4.1.3 M032 Series Pin Diagram .....                                      | 99         |
| 4.1.4 M032 Series Multi-function Pin Diagram .....                       | 105        |
| 4.2 Pin Description .....                                                | 154        |
| 4.2.1 M031 Series Pin Description .....                                  | 154        |
| 4.2.2 M032 Series Pin Description .....                                  | 175        |
| 4.2.3 M031/M032 Series Multi-function Summary Table Sorted by GPIO ..... | 220        |
| <b>5 BLOCK DIAGRAM .....</b>                                             | <b>246</b> |
| <b>6 FUNCTIONAL DESCRIPTION .....</b>                                    | <b>247</b> |
| 6.1 Arm® Cortex®-M0 Core.....                                            | 247        |
| 6.2 Clock Controller.....                                                | 249        |
| 6.2.1 Overview .....                                                     | 249        |
| 6.2.2 Clock Generator .....                                              | 251        |
| 6.2.3 System Clock and SysTick Clock .....                               | 253        |
| 6.2.4 Peripherals Clock .....                                            | 255        |
| 6.2.5 Power-down Mode Clock .....                                        | 255        |
| 6.2.6 Clock Output .....                                                 | 256        |
| 6.2.7 USB Clock Source .....                                             | 256        |

|                                                          |     |
|----------------------------------------------------------|-----|
| 6.3 System Manager .....                                 | 258 |
| 6.3.1 Overview .....                                     | 258 |
| 6.3.2 System Reset .....                                 | 258 |
| 6.3.3 System Power Distribution .....                    | 264 |
| 6.3.4 Power Modes and Wake-up Sources.....               | 264 |
| 6.3.5 System Memory Map.....                             | 268 |
| 6.3.6 SRAM Memory Organization.....                      | 270 |
| 6.3.7 SRAM Memory Organization with parity function..... | 270 |
| 6.3.8 Chip Bus Matrix .....                              | 272 |
| 6.3.9 IRC Auto Trim .....                                | 272 |
| 6.3.10 Register Lock Control .....                       | 273 |
| 6.3.11 UART0_TXD/USC10_DAT0 modulation with PWM.....     | 273 |
| 6.3.12 System Timer (SysTick) .....                      | 274 |
| 6.3.13 Nested Vectored Interrupt Controller (NVIC) ..... | 275 |
| 6.4 Flash Memory Controller (FMC) .....                  | 278 |
| 6.4.1 Overview .....                                     | 278 |
| 6.5 General Purpose I/O (GPIO) .....                     | 279 |
| 6.5.1 Overview .....                                     | 279 |
| 6.5.2 Features .....                                     | 279 |
| 6.6 PDMA Controller (PDMA) .....                         | 280 |
| 6.6.1 Overview .....                                     | 280 |
| 6.6.2 Features .....                                     | 280 |
| 6.7 Timer Controller (TMR) .....                         | 281 |
| 6.7.1 Overview .....                                     | 281 |
| 6.7.2 Features .....                                     | 281 |
| 6.8 Watchdog Timer (WDT) .....                           | 282 |
| 6.8.1 Overview .....                                     | 282 |
| 6.8.2 Features .....                                     | 282 |
| 6.9 Window Watchdog Timer (WWDT) .....                   | 283 |
| 6.9.1 Overview .....                                     | 283 |
| 6.9.2 Features .....                                     | 283 |
| 6.10 Real Time Clock (RTC) .....                         | 284 |
| 6.10.1 Overview .....                                    | 284 |
| 6.10.2 Features .....                                    | 284 |
| 6.11 Basic PWM Generator and Capture Timer (BPWM) .....  | 285 |
| 6.11.1 Overview .....                                    | 285 |
| 6.11.2 Features .....                                    | 285 |
| 6.12 PWM Generator and Capture Timer (PWM).....          | 286 |
| 6.12.1 Overview .....                                    | 286 |
| 6.12.2 Features .....                                    | 286 |

|        |                                                                 |     |
|--------|-----------------------------------------------------------------|-----|
| 6.13   | UART Interface Controller (UART)                                | 288 |
| 6.13.1 | Overview                                                        | 288 |
| 6.13.2 | Features                                                        | 288 |
| 6.14   | Serial Peripheral Interface (SPI)                               | 290 |
| 6.14.1 | Overview                                                        | 290 |
| 6.14.2 | Features                                                        | 290 |
| 6.15   | Quad Serial Peripheral Interface (QSPI)                         | 291 |
| 6.15.1 | Overview                                                        | 291 |
| 6.15.2 | Features                                                        | 291 |
| 6.16   | I <sup>2</sup> C Serial Interface Controller (I <sup>2</sup> C) | 292 |
| 6.16.1 | Overview                                                        | 292 |
| 6.16.2 | Features                                                        | 292 |
| 6.17   | USCI - Universal Serial Control Interface Controller (USCI)     | 294 |
| 6.17.1 | Overview                                                        | 294 |
| 6.17.2 | Features                                                        | 294 |
| 6.18   | USCI – UART Mode                                                | 295 |
| 6.18.1 | Overview                                                        | 295 |
| 6.18.2 | Features                                                        | 295 |
| 6.19   | USCI - SPI Mode                                                 | 296 |
| 6.19.1 | Overview                                                        | 296 |
| 6.19.2 | Features                                                        | 296 |
| 6.20   | USCI - I <sup>2</sup> C Mode                                    | 298 |
| 6.20.1 | Overview                                                        | 298 |
| 6.20.2 | Features                                                        | 298 |
| 6.21   | External Bus Interface (EBI)                                    | 299 |
| 6.21.1 | Overview                                                        | 299 |
| 6.21.2 | Features                                                        | 299 |
| 6.22   | USB 2.0 Full-Speed Device Controller (USBD)                     | 300 |
| 6.22.1 | Overview                                                        | 300 |
| 6.22.2 | Features                                                        | 300 |
| 6.23   | CRC Controller (CRC)                                            | 301 |
| 6.23.1 | Overview                                                        | 301 |
| 6.23.2 | Features                                                        | 301 |
| 6.24   | Hardware Divider (HDIV)                                         | 302 |
| 6.24.1 | Overview                                                        | 302 |
| 6.24.2 | Features                                                        | 302 |
| 6.25   | Analog-to-Digital Converter (ADC)                               | 303 |
| 6.25.1 | Overview                                                        | 303 |
| 6.25.2 | Features                                                        | 303 |

|          |                                                                                      |            |
|----------|--------------------------------------------------------------------------------------|------------|
| 6.26     | Analog Comparator Controller (ACMP) .....                                            | 305        |
| 6.26.1   | Overview .....                                                                       | 305        |
| 6.26.2   | Features .....                                                                       | 305        |
| 6.27     | Peripherals Interconnection.....                                                     | 306        |
| 6.27.1   | Overview .....                                                                       | 306        |
| 6.27.2   | Peripherals Interconnect Matrix table .....                                          | 306        |
| <b>7</b> | <b>APPLICATION CIRCUIT .....</b>                                                     | <b>307</b> |

## 1 GENERAL DESCRIPTION

The NuMicro® M031/M032 series 32-bit microcontroller is based on Arm® Cortex®-M0 core with 32-bit hardware multiplier/divider. It features 1.8 ~ 3.6 V operating voltage, 5 V I/O tolerant, and runs up to 48/72 MHz within -40°C ~105°C.

The M031/M032 series provides a solution for the applications that need 1.8 V low-voltage interface connection with enhanced fast 2 MSPS conversion rate 12-bit ADC, comparators and up-to 24-ch 96/144 MHz PWM control. It supports a fast and precise data conversion for the voltage, current, and sensor data, then fast response control to the external device. Additionally, the M031/M032 series also provides plenty of peripherals including Universal Serial Control Interface(USCI) that can be set as UART/SPI/I<sup>2</sup>C flexibly, up to 10 sets of UART, 4 sets of SPI, 4 sets of I<sup>2</sup>C, and 1-wire UART interface for data communication between master and slave devices.

The M031/M032 series provides Flash size from 16 Kbytes to 512 Kbytes, SRAM size from 2 Kbytes to 96 Kbytes. Supported packages from small form factor TSSOP 20-pin, TSSOP 28-pin, QFN 33-pin, LQFP 48-pin to LQFP 64-pin and LQFP 128-pin with pin-compatible for different part numbers makes the system design and parts change easily.

Part Numbers with the M032 series are all based on the M031 series and enhanced with the crystal-less USB 2.0 full-speed device feature for USB related applications.

For the development, Nuvoton provides the NuMaker-PFM evaluation board and Nuvoton Nu-Link debugger. The 3<sup>rd</sup> Party IDE such as Keil® MDK, IAR EWArm, Eclipse IDE with GNU GCC compilers are also supported.

| Product Line | UART | I <sup>2</sup> C | SPI/I <sup>2</sup> S | QSPI | USCI | Time<br>r | PWM | RTC | PDMA | EBI | ADC | ACMP | Divider | USBD | IEC60730 |

Table 1-1 NuMicro® M031/M032 Series Key Features Support Table

The NuMicro® M031/M032 series is suitable for a wide range of applications such as:

- Laser Distance Meter
- Air Detector/Cleaner
- Mobile LCD Panel Controller
- IoT Sensing Device
- HMI Controller
- Micro Printer
- Gaming Keyboard and Mouse
- WPC Wireless Charger

## 2 FEATURES

### 2.1 M031/M032 Features

#### Core and System

- |                        |                                                                                                                                                                                                                                                                                                                                                                                                                                          |

- Supports RTC Time Tick and Alarm Match interrupt
- Automatic leap year recognition
- Supports 1 Hz clock output for calibration

## Timers

### 32-bit Timer

- Up to 4 sets of 32-bit timers with 24-bit up counter and one 8-bit pre-scale counter from independent clock source
- One-shot, Periodic, Toggle and Continuous Counting operation modes
- Supports event counting function to count the event from external pins
- Supports external capture pin for interval measurement and resetting 24-bit up counter
- Supports chip wake-up function, if a timer interrupt signal is generated

### PWM (PWM)

- Up to two PWM modules, each module provides three 16-bit counter and 6 output channels.
- Up to 12 independent input capture channels with 16-bit resolution counter
- Supports dead time with maximum divided 12-bit prescale
- Up, down or up-down PWM counter type
- Supports complementary mode for 3 complementary paired PWM output channels
- Counter synchronous start function
- Brake function with auto recovery mechanism
- Mask function and tri-state output for each PWM channel
- Able to trigger ADC to start conversion

### Basic PWM (BPWM)

- Two 16-bit counters with 12-bit clock prescale for twelve 144 MHz PWM output channels.
- Up to 6 independent input capture channels with 16-bit resolution counter
- Up, down or up-down PWM counter type
- Counter synchronous start function
- Mask function and tri-state output for each PWM channel
- Able to trigger ADC to start conversion

### Watchdog

- 20-bit free running up counter for WDT time-out interval
- Supports multiple clock sources from LIRC (default selection), HCLK/2048 and LXT with 9 selectable time-out period
- Able to wake up system from Power-down or Idle mode
- Time-out event to trigger interrupt or reset system
- Supports four WDT reset delay periods, including 1026, 130, 18 or 3 WDT\_CLK reset delay period

- SPI/I<sup>2</sup>S controllers with Master/Slave mode.

#### SPI

- Up to 24 MHz in Master mode and up to 16 MHz in Slave mode at 1.8V~3.6V system voltage.
- Configurable bit length of a transfer word from 8 to 32-bit.
- Provides separate 4-level of 32-bit (or 8-level of 16-bit) transmit and receive FIFO buffers.
- MSB first or LSB first transfer sequence.
- Byte reorder function.
- Supports Byte or Word Suspend mode.
- Supports one data channel half-duplex transfer.
- Supports receive-only mode.
- PDMA operation.

#### SPI/I<sup>2</sup>S

#### I<sup>2</sup>S

- Supports mono and stereo audio data with 8-, 16-, 24- and 32-bit audio data sizes.
- Provides separate 4-level depth transmit and receive FIFO buffers.
- Supports PCM mode A, PCM mode B, I<sup>2</sup>S and MSB justified data format.
- PDMA operation.
- Generates interrupt requests when buffer levels cross as programmable boundary

- 
- Two sets of USCI, configured as UART, SPI or I<sup>2</sup>C function.
  - Supports single byte TX and RX buffer mode

#### UART

- Supports one transmit buffer and two receive buffers for data payload.
- Supports hardware auto flow control function and programmable flow control trigger level.
- 9-bit Data Transfer.
- Baud rate detection by built-in capture event of baud rate generator.
- Supports wake-up function.
- PDMA operation.

#### Universal Serial Control Interface (USCI)

#### SPI

- Supports Master or Slave mode operation.
- Supports one transmit buffer and two receive buffer for data payload.
- Configurable bit length of a transfer word from 4 to 16-bit.
- Supports MSB first or LSB first transfer sequence.
- Supports Word Suspend function.
- Supports 3-wire, no slave select signal, bi-direction interface.
- Supports wake-up function: input slave select transition.

- PDMA operation.
- Supports one data channel half-duplex transfer.

#### I<sup>2</sup>C

- Supports master and slave device capability.
- Supports one transmit buffer and two receive buffer for data payload.
- Communication in standard mode (100 kbps), fast mode (up to 400 kbps), and Fast mode plus (1 Mbps).
- Supports 7-bit mode (10-bit mode not supported).
- Supports 10-bit bus time out capability.
- Supports bus monitor mode.
- Supports power-down wake-up by data toggle or address match.
- Supports multiple address recognition.
- Supports device address flag.
- Programmable setup/hold time.

#### External Bus Interface (EBI)

- Supports up to two memory banks with individual adjustment of timing parameter.
- Each bank supports dedicated external chip select pin with polarity control and up to 1 MB addressing space.
- 8-/16-bit data width.
- Supports byte write in 16-bit data width mode.
- Configurable idle cycle for different access condition: Idle of Write command finish (W2X) and Idle of Read-to-Read (R2R).
- Supports Address/Data multiplexed mode.
- Supports address bus and data bus separate mode.
- Supports LCD interface i80 mode.
- PDMA operation.

#### GPIO

- Supports four I/O modes: Quasi bi-direction, Push-Pull output, Open-Drain output and Input only with high impedance mode.
- Configured as interrupt source with edge/level trigger setting.
- I/O pin internal pull-up resistor enabled only in Quasi-bidirectional I/O mode.
- Supports 5V-tolerance function except analog IO (PA.10, PA.11, PB.0~PB.15, PF.2~PF.5).
- Enabling the pin interrupt function will also enable the wake-up function.
- Input schmitt trigger function.

#### Advanced Connectivity

##### USB 2.0 Full Speed with on-chip transceiver

- Compliant with USB Revision 2.0 Specification.
- Supports suspend function when no bus activity existing for 3 ms.
- 8 configurable endpoints for configurable Isochronous, Bulk,

---

Interrupt and Control transfer types.

- 512 bytes configurable RAM for endpoint buffer.
  - Remote wake-up capability.
  - Supports Crystal-less function
  - Start of Frame (SOF) locked clock pulse generation
  - USB 2.0 link power management.
-

4 PIN CONFIGURATION

Users can find pin configuration informations in chapter 3 or by using [NuTool - PinConfig](#). The NuTool - PinConfigure contains all Nuvoton NuMicro® Family chip series with all part number, and helps users configure GPIO multi-function correctly and handily.

Table 4.1-37 M032KIAAE Multi-function Pin Table

## 4.2 Pin Description

Different part number with same package might has different function. Please refer to the selection guide in section 3.2.

### 4.2.1 M031 Series Pin Description

Corresponding Part Number: M031xB, M031xC, M031xD, M031xE, M031xG, M031xI series.

| 20 Pin | 28 Pin | 32 Pin | 48 Pin | 64 Pin | 128 Pin | Pin Name  | Type | MFP   | Description                                   |
|--------|--------|--------|--------|--------|---------|-----------|------|-------|-----------------------------------------------|

|        |        |         | ADC0_CH4   | A    | MFP1  | ADC0 channel 4 analog input.                  |
|        |        |         | ACMP1_P1   | A    | MFP1  | Analog comparator 1 positive input 1 pin.     |
|        |        |         | EBI_ADR1   | O    | MFP2  | EBI address bus bit 1.                        |
|        |        |         | I2C0_SDA   | I/O  | MFP6  | I2C0 data input/output pin.                   |

| 48 Pin | 64 Pin | 128 Pin | Pin Name    | Type | MFP   | Description                                   |
|--------|--------|---------|-------------|------|-------|-----------------------------------------------|
|        |        |         | UART5_RXD   | I    | MFP7  | UART5 data receiver input pin.                |
|        |        |         | USCI1_CTL1  | I/O  | MFP8  | USCI1 control 1 pin.                          |
|        |        |         | PWM0_CH1    | I/O  | MFP11 | PWM0 channel 1 output/capture input.          |
|        |        |         | UART2_RXD   | I    | MFP13 | UART2 data receiver input pin.                |
|        |        |         | TM1         | I/O  | MFP14 | Timer1 event counter input/toggle output pin. |
|        |        |         | INT1        | I    | MFP15 | External interrupt 1 input pin.               |
| 3      | 4      | 3       | PB.3        | I/O  | MFP0  | General purpose digital I/O pin.              |
|        |        |         | ADC0_CH3    | A    | MFP1  | ADC0 channel 3 analog input.                  |
|        |        |         | ACMP0_N     | A    | MFP1  | Analog comparator 0 negative input pin.       |
|        |        |         | EBI_ADR2    | O    | MFP2  | EBI address bus bit 2.                        |
|        |        |         | I2C1_SCL    | I/O  | MFP4  | I2C1 clock pin.                               |
|        |        |         | UART1_TXD   | O    | MFP6  | UART1 data transmitter output pin.            |
|        |        |         | UART5_nRTS  | O    | MFP7  | UART5 request to Send output pin.             |
|        |        |         | USCI1_DAT1  | I/O  | MFP8  | USCI1 data 1 pin.                             |
|        |        |         | PWM0_CH2    | I/O  | MFP11 | PWM0 channel 2 output/capture input.          |
|        |        |         | PWM0_BRAKE0 | I    | MFP13 | PWM0 Brake 0 input pin.                       |
|        |        |         | TM2         | I/O  | MFP14 | Timer2 event counter input/toggle output pin. |
|        |        |         | INT2        | I    | MFP15 | External interrupt 2 input pin.               |
| 4      | 5      | 4       | PB.2        | I/O  | MFP0  | General purpose digital I/O pin.              |
|        |        |         | ADC0_CH2    | A    | MFP1  | ADC0 channel 2 analog input.                  |
|        |        |         | ACMP0_P1    | A    | MFP1  | Analog comparator 0 positive input 1 pin.     |
|        |        |         | EBI_ADR3    | O    | MFP2  | EBI address bus bit 3.                        |
|        |        |         | I2C1_SDA    | I/O  | MFP4  | I2C1 data input/output pin.                   |
|        |        |         | UART1_RXD   | I    | MFP6  | UART1 data receiver input pin.                |
|        |        |         | UART5_nCTS  | I    | MFP7  | UART5 clear to Send input pin.                |
|        |        |         | USCI1_DAT0  | I/O  | MFP8  | USCI1 data 0 pin.                             |
|        |        |         | PWM0_CH3    | I/O  | MFP11 | PWM0 channel 3 output/capture input.          |
|        |        |         | TM3         | I/O  | MFP14 | Timer3 event counter input/toggle output pin. |
|        |        |         | INT3        | I    | MFP15 | External interrupt 3 input pin.               |
|        |        | 5       | PC.12       | I/O  | MFP0  | General purpose digital I/O pin.              |
|        |        |         | EBI_ADR4    | O    | MFP2  | EBI address bus bit 4.                        |
|        |        |         | UART0_TXD   | O    | MFP3  | UART0 data transmitter output pin.            |
|        |        |         | I2C0_SCL    | I/O  | MFP4  | I2C0 clock pin.                               |
|        |        |         | UART6_TXD   | O    | MFP5  | UART6 data transmitter output pin.            |

| 48 Pin | 64 Pin | 128 Pin | Pin Name     | Type | MFP   | Description                                   |
|--------|--------|---------|--------------|------|-------|-----------------------------------------------|
|        |        |         | PWM1_CH0     | I/O  | MFP12 | PWM1 channel 0 output/capture input.          |
|        |        |         | ACMP0_O      | O    | MFP14 | Analog comparator 0 output pin.               |
|        |        | 6       | PC.11        | I/O  | MFP0  | General purpose digital I/O pin.              |
|        |        |         | EBI_ADR5     | O    | MFP2  | EBI address bus bit 5.                        |
|        |        |         | UART0_RXD    | I    | MFP3  | UART0 data receiver input pin.                |
|        |        |         | I2C0_SDA     | I/O  | MFP4  | I2C0 data input/output pin.                   |
|        |        |         | UART6_RXD    | I    | MFP5  | UART6 data receiver input pin.                |
|        |        |         | PWM1_CH1     | I/O  | MFP12 | PWM1 channel 1 output/capture input.          |
|        |        |         | ACMP1_O      | O    | MFP14 | Analog comparator 1 output pin.               |
|        |        | 7       | PC.10        | I/O  | MFP0  | General purpose digital I/O pin.              |
|        |        |         | EBI_ADR6     | O    | MFP2  | EBI address bus bit 6.                        |
|        |        |         | UART6_nRTS   | O    | MFP5  | UART6 request to Send output pin.             |
|        |        |         | UART3_TXD    | O    | MFP7  | UART3 data transmitter output pin.            |
|        |        |         | PWM1_CH2     | I/O  | MFP12 | PWM1 channel 2 output/capture input.          |
|        |        | 8       | PC.9         | I/O  | MFP0  | General purpose digital I/O pin.              |
|        |        |         | EBI_ADR7     | O    | MFP2  | EBI address bus bit 7.                        |
|        |        |         | UART6_nCTS   | I    | MFP5  | UART6 clear to Send input pin.                |
|        |        |         | UART3_RXD    | I    | MFP7  | UART3 data receiver input pin.                |
|        |        |         | PWM1_CH3     | I/O  | MFP12 | PWM1 channel 3 output/capture input.          |
| 5      | 6      | 9       | PB.1         | I/O  | MFP0  | General purpose digital I/O pin.              |
|        |        |         | ADC0_CH1     | A    | MFP1  | ADC0 channel 1 analog input.                  |
|        |        |         | EBI_ADR8     | O    | MFP2  | EBI address bus bit 8.                        |
|        |        |         | UART2_TXD    | O    | MFP7  | UART2 data transmitter output pin.            |
|        |        |         | USC11_CLK    | I/O  | MFP8  | USC11 clock pin.                              |
|        |        |         | I2C1_SCL     | I/O  | MFP9  | I2C1 clock pin.                               |
|        |        |         | QSPI0_MISO1  | I/O  | MFP10 | Quad SPI0 MISO1 (Master In, Slave Out) pin.   |
|        |        |         | PWM0_CH4     | I/O  | MFP11 | PWM0 channel 4 output/capture input.          |
|        |        |         | PWM1_CH4     | I/O  | MFP12 | PWM1 channel 4 output/capture input.          |
|        |        |         | PWM0_BRAKE0  | I    | MFP13 | PWM0 Brake 0 input pin.                       |
| 6      | 7      | 10      | PB.0         | I/O  | MFP0  | General purpose digital I/O pin.              |
|        |        |         | ADC0_CH0     | A    | MFP1  | ADC0 channel 0 analog input.                  |
|        |        |         | EBI_ADR9     | O    | MFP2  | EBI address bus bit 9.                        |
|        |        |         | UART2_RXD    | I    | MFP7  | UART2 data receiver input pin.                |
|        |        |         | SPI0_I2SMCLK | I/O  | MFP8  | SPI0 I <sup>2</sup> S master clock output pin |

| 48 Pin | 64 Pin | 128 Pin | Pin Name        | Type | MFP   | Description                                                                     |
|--------|--------|---------|-----------------|------|-------|---------------------------------------------------------------------------------|
|        |        |         | I2C1_SDA        | I/O  | MFP9  | I2C1 data input/output pin.                                                     |
|        |        |         | QSPI0_MOSI1     | I/O  | MFP10 | Quad SPI0 MOSI1 (Master Out, Slave In) pin.                                     |
|        |        |         | PWM0_CH5        | I/O  | MFP11 | PWM0 channel 5 output/capture input.                                            |
|        |        |         | PWM1_CH5        | I/O  | MFP12 | PWM1 channel 5 output/capture input.                                            |
|        |        |         | PWM0_BRAKE1     | I    | MFP13 | PWM0 Brake 1 input pin.                                                         |
|        |        | 11      | V <sub>SS</sub> | P    | MFP0  | Ground pin for digital circuit.                                                 |
|        |        | 12      | V <sub>DD</sub> | P    | MFP0  | Power supply for I/O ports and LDO source for internal PLL and digital circuit. |
| 7      | 8      | 13      | PA.11           | I/O  | MFP0  | General purpose digital I/O pin.                                                |
|        |        |         | ACMP0_P0        | A    | MFP1  | Analog comparator 0 positive input 0 pin.                                       |
|        |        |         | EBI_nRD         | O    | MFP2  | EBI read enable output pin.                                                     |
|        |        |         | USCI0_CLK       | I/O  | MFP6  | USCI0 clock pin.                                                                |
|        |        |         | UART6_TXD       | O    | MFP8  | UART6 data transmitter output pin.                                              |
|        |        |         | BPWM0_CH0       | I/O  | MFP9  | BPWM0 channel 0 output/capture input.                                           |
|        |        |         | TM0_EXT         | I/O  | MFP13 | Timer0 external capture input/toggle output pin.                                |
| 8      | 9      | 14      | PA.10           | I/O  | MFP0  | General purpose digital I/O pin.                                                |
|        |        |         | ACMP1_P0        | A    | MFP1  | Analog comparator 1 positive input 0 pin.                                       |
|        |        |         | EBI_nWR         | O    | MFP2  | EBI write enable output pin.                                                    |
|        |        |         | USCI0_DAT0      | I/O  | MFP6  | USCI0 data 0 pin.                                                               |
|        |        |         | UART6_RXD       | I    | MFP8  | UART6 data receiver input pin.                                                  |
|        |        |         | BPWM0_CH1       | I/O  | MFP9  | BPWM0 channel 1 output/capture input.                                           |
|        |        |         | TM1_EXT         | I/O  | MFP13 | Timer1 external capture input/toggle output pin.                                |
| 9      | 10     | 15      | PA.9            | I/O  | MFP0  | General purpose digital I/O pin.                                                |
|        |        |         | EBI_MCLK        | O    | MFP2  | EBI external clock output pin.                                                  |
|        |        |         | USCI0_DAT1      | I/O  | MFP6  | USCI0 data 1 pin.                                                               |

|        |        |        |        | ADC0_CH7         | A    | MFP1  | ADC0 channel 7 analog input.                     |
|        |        |        |        | USCI1_DAT0       | I/O  | MFP4  | USCI1 data 0 pin.                                |
|        |        |        |        | BPWM1_CH4        | I/O  | MFP10 | BPWM1 channel 4 output/capture input.            |

| 20 Pin | 28 Pin | 32 Pin | 48 Pin | Pin Name   | Type | MFP   | Description                           |
|--------|--------|--------|--------|------------|------|-------|---------------------------------------|
|        |        |        |        | INT5       | I    | MFP13 | External interrupt 5 input pin.       |
|        |        |        | 48     | PB.6       | I/O  | MFP0  | General purpose digital I/O pin.      |
|        |        |        |        | ADC0_CH6   | A    | MFP1  | ADC0 channel 6 analog input.          |
|        |        |        |        | USC11_DAT1 | I/O  | MFP4  | USC11 data 1 pin.                     |
|        |        |        |        | BPWM1_CH5  | I/O  | MFP10 | BPWM1 channel 5 output/capture input. |
|        |        |        |        | INT4       | I    | MFP13 | External interrupt 4 input pin.       |

M031/M032 Series Multi-function Summary Table

Corresponding Part Number: M031xB, M031xC, M031xD, M031xE, M031xG, M031xI series.

| Group | Pin Name   | GPIO  | MFP   | Type | Description                                |
|-------|------------|-------|-------|------|--------------------------------------------|
| ACMP0 | ACMP0_N    | PB.3  | MFP1  | A    | Analog comparator 0 negative input pin.    |
|       | ACMP0_O    | PC.12 | MFP14 | O    | Analog comparator 0 output pin.            |
|       |            | PC.1  | MFP14 | O    |                                            |
|       |            | PB.7  | MFP15 | O    |                                            |
|       | ACMP0_P0   | PA.11 | MFP1  | A    | Analog comparator 0 positive input 0 pin.  |
|       | ACMP0_P1   | PB.2  | MFP1  | A    | Analog comparator 0 positive input 1 pin.  |
|       | ACMP0_P2   | PB.12 | MFP1  | A    | Analog comparator 0 positive input 2 pin.  |
|       | ACMP0_P3   | PB.13 | MFP1  | A    | Analog comparator 0 positive input 3 pin.  |
|       | ACMP0_WLAT | PA.7  | MFP13 | I    | Analog comparator 0 window latch input pin |
| ACMP1 | ACMP1_N    | PB.5  | MFP1  | A    | Analog comparator 1 negative input pin.    |
|       | ACMP1_O    | PC.11 | MFP14 | O    | Analog comparator 1 output pin.            |
|       |            | PC.0  | MFP14 | O    |                                            |
|       |            | PB.6  | MFP15 | O    |                                            |
|       | ACMP1_P0   | PA.10 | MFP1  | A    | Analog comparator 1 positive input 0 pin.  |
|       | ACMP1_P1   | PB.4  | MFP1  | A    | Analog comparator 1 positive input 1 pin.  |
|       | ACMP1_P2   | PB.12 | MFP1  | A    | Analog comparator 1 positive input 2 pin.  |
|       | ACMP1_P3   | PB.13 | MFP1  | A    | Analog comparator 1 positive input 3 pin.  |
|       | ACMP1_WLAT | PA.6  | MFP13 | I    | Analog comparator 1 window latch input pin |
| ADC0  | ADC0_CH0   | PB.0  | MFP1  | A    | ADC0 channel 0 analog input.               |
|       | ADC0_CH1   | PB.1  | MFP1  | A    | ADC0 channel 1 analog input.               |
|       | ADC0_CH2   | PB.2  | MFP1  | A    | ADC0 channel 2 analog input.               |
|       | ADC0_CH3   | PB.3  | MFP1  | A    | ADC0 channel 3 analog input.               |

| Group | Pin Name  | GPIO  | MFP   | Type | Description                           |
|-------|-----------|-------|-------|------|---------------------------------------|
|       | ADC0_CH4  | PB.4  | MFP1  | A    | ADC0 channel 4 analog input.          |
|       | ADC0_CH5  | PB.5  | MFP1  | A    | ADC0 channel 5 analog input.          |
|       | ADC0_CH6  | PB.6  | MFP1  | A    | ADC0 channel 6 analog input.          |
|       | ADC0_CH7  | PB.7  | MFP1  | A    | ADC0 channel 7 analog input.          |
|       | ADC0_CH8  | PB.8  | MFP1  | A    | ADC0 channel 8 analog input.          |
|       | ADC0_CH9  | PB.9  | MFP1  | A    | ADC0 channel 9 analog input.          |
|       | ADC0_CH10 | PB.10 | MFP1  | A    | ADC0 channel 10 analog input.         |
|       | ADC0_CH11 | PB.11 | MFP1  | A    | ADC0 channel 11 analog input.         |
|       | ADC0_CH12 | PB.12 | MFP1  | A    | ADC0 channel 12 analog input.         |
|       | ADC0_CH13 | PB.13 | MFP1  | A    | ADC0 channel 13 analog input.         |
|       | ADC0_CH14 | PB.14 | MFP1  | A    | ADC0 channel 14 analog input.         |
|       | ADC0_CH15 | PB.15 | MFP1  | A    | ADC0 channel 15 analog input.         |
|       | ADC0_ST   | PC.13 | MFP14 | I    | ADC0 external trigger input pin.      |
|       |           | PD.12 | MFP14 | I    |                                       |
|       |           | PF.5  | MFP11 | I    |                                       |
|       |           | PC.1  | MFP15 | I    |                                       |
|       |           | PG.15 | MFP15 | I    |                                       |
| BPWM0 | BPWM0_CH0 | PA.11 | MFP9  | I/O  | BPWM0 channel 0 output/capture input. |
|       |           | PA.0  | MFP12 | I/O  |                                       |
|       |           | PG.14 | MFP12 | I/O  |                                       |
|       |           | PE.2  | MFP13 | I/O  |                                       |
|       | BPWM0_CH1 | PA.10 | MFP9  | I/O  | BPWM0 channel 1 output/capture input. |
|       |           | PA.1  | MFP12 | I/O  |                                       |
|       |           | PG.13 | MFP12 | I/O  |                                       |
|       |           | PE.3  | MFP13 | I/O  |                                       |
|       | BPWM0_CH2 | PA.9  | MFP9  | I/O  | BPWM0 channel 2 output/capture input. |
|       |           | PA.2  | MFP12 | I/O  |                                       |
|       |           | PG.12 | MFP12 | I/O  |                                       |
|       |           | PE.4  | MFP13 | I/O  |                                       |
|       | BPWM0_CH3 | PA.8  | MFP9  | I/O  | BPWM0 channel 3 output/capture input. |
|       |           | PA.3  | MFP12 | I/O  |                                       |
|       |           | PG.11 | MFP12 | I/O  |                                       |
|       |           | PE.5  | MFP13 | I/O  |                                       |
|       | BPWM0_CH4 | PC.13 | MFP9  | I/O  | BPWM0 channel 4 output/capture input. |

| Group | Pin Name  | GPIO  | MFP   | Type | Description                           |
|-------|-----------|-------|-------|------|---------------------------------------|
|       |           | PF.5  | MFP8  | I/O  |                                       |
|       |           | PA.4  | MFP12 | I/O  |                                       |
|       |           | PG.10 | MFP12 | I/O  |                                       |
|       |           | PE.6  | MFP13 | I/O  |                                       |
|       | BPWM0_CH5 | PD.12 | MFP9  | I/O  | BPWM0 channel 5 output/capture input. |
|       |           | PF.4  | MFP8  | I/O  |                                       |
|       |           | PA.5  | MFP12 | I/O  |                                       |
|       |           | PG.9  | MFP12 | I/O  |                                       |
|       |           | PE.7  | MFP13 | I/O  |                                       |
| BPWM1 | BPWM1_CH0 | PF.3  | MFP11 | I/O  | BPWM1 channel 0 output/capture input. |
|       |           | PC.7  | MFP12 | I/O  |                                       |
|       |           | PF.0  | MFP12 | I/O  |                                       |
|       |           | PB.11 | MFP10 | I/O  |                                       |
|       | BPWM1_CH1 | PF.2  | MFP11 | I/O  | BPWM1 channel 1 output/capture input. |
|       |           | PC.6  | MFP12 | I/O  |                                       |
|       |           | PF.1  | MFP12 | I/O  |                                       |
|       |           | PB.10 | MFP10 | I/O  |                                       |
|       | BPWM1_CH2 | PA.7  | MFP12 | I/O  | BPWM1 channel 2 output/capture input. |
|       |           | PA.12 | MFP11 | I/O  |                                       |
|       |           | PB.9  | MFP10 | I/O  |                                       |
|       | BPWM1_CH3 | PA.6  | MFP12 | I/O  | BPWM1 channel 3 output/capture input. |
|       |           | PA.13 | MFP11 | I/O  |                                       |
|       |           | PB.8  | MFP10 | I/O  |                                       |
|       | BPWM1_CH4 | PC.8  | MFP12 | I/O  | BPWM1 channel 4 output/capture input. |
|       |           | PA.14 | MFP11 | I/O  |                                       |
|       |           | PB.7  | MFP10 | I/O  |                                       |
|       | BPWM1_CH5 | PE.13 | MFP12 | I/O  | BPWM1 channel 5 output/capture input. |
|       |           | PA.15 | MFP11 | I/O  |                                       |
|       |           | PB.6  | MFP10 | I/O  |                                       |

|       | USCI1_DAT0 | PB.2  | MFP8  | I/O  | USCI1 data 0 pin.                                  |
|       |            | PE.10 | MFP6  | I/O  |                                                    |
|       |            | PD.5  | MFP6  | I/O  |                                                    |
|       |            | PB.7  | MFP4  | I/O  |                                                    |
|       | USCI1_DAT1 | PB.3  | MFP8  | I/O  | USCI1 data 1 pin.                                  |
|       |            | PE.11 | MFP6  | I/O  |                                                    |
|       |            | PD.6  | MFP6  | I/O  |                                                    |
|       |            | PB.6  | MFP4  | I/O  |                                                    |
| X32   | X32_IN     | PF.5  | MFP10 | I    | External 32.768 kHz crystal input pin.             |
|       | X32_OUT    | PF.4  | MFP10 | O    | External 32.768 kHz crystal output pin.            |
| XT1   | XT1_IN     | PF.3  | MFP10 | I    | External 4~24 MHz (high speed) crystal input pin.  |
|       | XT1_OUT    | PF.2  | MFP10 | O    | External 4~24 MHz (high speed) crystal output pin. |

### 4.2.3 M031/M032 Series Multi-function Summary Table Sorted by GPIO

Corresponding Part Number: M032xE, M032xG, M032xI series.

|      | Pin Name    | Type | MFP   | Description                                 |
|------|-------------|------|-------|---------------------------------------------|
| PA.0 | PA.0        | I/O  | MFP0  | General purpose digital I/O pin.            |
|      | QSPI0_MOSI0 | I/O  | MFP3  | Quad SPI0 MOSI0 (Master Out, Slave In) pin. |
|      | SPI0_MOSI   | I/O  | MFP4  | SPI0 MOSI (Master Out, Slave In) pin.       |
|      | UART0_RXD   | I    | MFP7  | UART0 data receiver input pin.              |
|      | UART1_nRTS  | O    | MFP8  | UART1 request to Send output pin.           |
|      | BPWM0_CH0   | I/O  | MFP12 | BPWM0 channel 0 output/capture input.       |
|      | PWM0_CH5    | I/O  | MFP13 | PWM0 channel 5 output/capture input.        |
| PA.1 | PA.1        | I/O  | MFP0  | General purpose digital I/O pin.            |
|      | QSPI0_MISO0 | I/O  | MFP3  | Quad SPI0 MISO0 (Master In, Slave Out) pin. |
|      | SPI0_MISO   | I/O  | MFP4  | SPI0 MISO (Master In, Slave Out) pin.       |
|      | UART0_TXD   | O    | MFP7  | UART0 data transmitter output pin.          |
|      | UART1_nCTS  | I    | MFP8  | UART1 clear to Send input pin.              |
|      | BPWM0_CH1   | I/O  | MFP12 | BPWM0 channel 1 output/capture input.       |
|      | PWM0_CH4    | I/O  | MFP13 | PWM0 channel 4 output/capture input.        |
| PA.2 | PA.2        | I/O  | MFP0  | General purpose digital I/O pin.            |
|      | QSPI0_CLK   | I/O  | MFP3  | Quad SPI0 serial clock pin.                 |
|      | SPI0_CLK    | I/O  | MFP4  | SPI0 serial clock pin.                      |
|      | UART4_RXD   | I    | MFP5  | UART4 data receiver input pin.              |
|      | I2C0_SMBSUS | O    | MFP7  | I2C0 SMBus SMBSUS pin (PMBus CONTROL pin)   |
|      | UART1_RXD   | I    | MFP8  | UART1 data receiver input pin.              |
|      | I2C1_SDA    | I/O  | MFP9  | I2C1 data input/output pin.                 |
|      | BPWM0_CH2   | I/O  | MFP12 | BPWM0 channel 2 output/capture input.       |
|      | PWM0_CH3    | I/O  | MFP13 | PWM0 channel 3 output/capture input.        |
| PA.3 | PA.3        | I/O  | MFP0  | General purpose digital I/O pin.            |
|      | QSPI0_SS    | I/O  | MFP3  | Quad SPI0 slave select pin.                 |
|      | SPI0_SS     | I/O  | MFP4  | SPI0 slave select pin.                      |
|      | UART4_TXD   | O    | MFP5  | UART4 data transmitter output pin.          |
|      | I2C0_SMBAL  | O    | MFP7  | I2C0 SMBus SMBALTER pin                     |
|      | UART1_TXD   | O    | MFP8  | UART1 data transmitter output pin.          |
|      | I2C1_SCL    | I/O  | MFP9  | I2C1 clock pin.                             |
|      | BPWM0_CH3   | I/O  | MFP12 | BPWM0 channel 3 output/capture input.       |

|      | Pin Name     | Type | MFP   | Description                                   |
|------|--------------|------|-------|-----------------------------------------------|
|      | PWM0_CH2     | I/O  | MFP13 | PWM0 channel 2 output/capture input.          |
|      | CLKO         | O    | MFP14 | Clock Out                                     |
|      | PWM1_BRAKE1  | I    | MFP15 | PWM1 Brake 1 input pin.                       |
| PA.4 | PA.4         | I/O  | MFP0  | General purpose digital I/O pin.              |
|      | QSPI0_MOSI1  | I/O  | MFP3  | Quad SPI0 MOSI1 (Master Out, Slave In) pin.   |
|      | SPI0_I2SMCLK | I/O  | MFP4  | SPI0 I <sup>2</sup> S master clock output pin |
|      | UART0_nRTS   | O    | MFP7  | UART0 request to Send output pin.             |
|      | UART0_RXD    | I    | MFP8  | UART0 data receiver input pin.                |
|      | I2C0_SDA     | I/O  | MFP9  | I2C0 data input/output pin.                   |
|      | UART5_RXD    | I    | MFP11 | UART5 data receiver input pin.                |
|      | BPWM0_CH4    | I/O  | MFP12 | BPWM0 channel 4 output/capture input.         |
|      | PWM0_CH1     | I/O  | MFP13 | PWM0 channel 1 output/capture input.          |
| PA.5 | PA.5         | I/O  | MFP0  | General purpose digital I/O pin.              |
|      | QSPI0_MISO1  | I/O  | MFP3  | Quad SPI0 MISO1 (Master In, Slave Out) pin.   |
|      | UART0_nCTS   | I    | MFP7  | UART0 clear to Send input pin.                |
|      | UART0_TXD    | O    | MFP8  | UART0 data transmitter output pin.            |
|      | I2C0_SCL     | I/O  | MFP9  | I2C0 clock pin.                               |
|      | UART5_TXD    | O    | MFP11 | UART5 data transmitter output pin.            |
|      | BPWM0_CH5    | I/O  | MFP12 | BPWM0 channel 5 output/capture input.         |
|      | PWM0_CH0     | I/O  | MFP13 | PWM0 channel 0 output/capture input.          |
| PA.6 | PA.6         | I/O  | MFP0  | General purpose digital I/O pin.              |
|      | EBI_AD6      | I/O  | MFP2  | EBI address/data bus bit 6.                   |
|      | UART0_RXD    | I    | MFP7  | UART0 data receiver input pin.                |
|      | I2C1_SDA     | I/O  | MFP8  | I2C1 data input/output pin.                   |
|      | PWM1_CH5     | I/O  | MFP11 | PWM1 channel 5 output/capture input.          |
|      | BPWM1_CH3    | I/O  | MFP12 | BPWM1 channel 3 output/capture input.         |
|      | ACMP1_WLAT   | I    | MFP13 | Analog comparator 1 window latch input pin    |
|      | TM3          | I/O  | MFP14 | Timer3 event counter input/toggle output pin. |
|      | INT0         | I    | MFP15 | External interrupt 0 input pin.               |
| PA.7 | PA.7         | I/O  | MFP0  | General purpose digital I/O pin.              |
|      | EBI_AD7      | I/O  | MFP2  | EBI address/data bus bit 7.                   |
|      | UART0_TXD    | O    | MFP7  | UART0 data transmitter output pin.            |
|      | I2C1_SCL     | I/O  | MFP8  | I2C1 clock pin.                               |
|      | PWM1_CH4     | I/O  | MFP11 | PWM1 channel 4 output/capture input.          |

|       | Pin Name   | Type | MFP   | Description                                      |
|-------|------------|------|-------|--------------------------------------------------|
|       | BPWM1_CH2  | I/O  | MFP12 | BPWM1 channel 2 output/capture input.            |
|       | ACMP0_WLAT | I    | MFP13 | Analog comparator 0 window latch input pin       |
|       | TM2        | I/O  | MFP14 | Timer2 event counter input/toggle output pin.    |
|       | INT1       | I    | MFP15 | External interrupt 1 input pin.                  |
| PA.8  | PA.8       | I/O  | MFP0  | General purpose digital I/O pin.                 |
|       | EBI_ALE    | O    | MFP2  | EBI address latch enable output pin.             |
|       | USCI0_CTL1 | I/O  | MFP6  | USCI0 control 1 pin.                             |
|       | UART1_RXD  | I    | MFP7  | UART1 data receiver input pin.                   |
|       | UART7_RXD  | I    | MFP8  | UART7 data receiver input pin.                   |
|       | BPWM0_CH3  | I/O  | MFP9  | BPWM0 channel 3 output/capture input.            |
|       | TM3_EXT    | I/O  | MFP13 | Timer3 external capture input/toggle output pin. |
|       | INT4       | I    | MFP15 | External interrupt 4 input pin.                  |
| PA.9  | PA.9       | I/O  | MFP0  | General purpose digital I/O pin.                 |
|       | EBI_MCLK   | O    | MFP2  | EBI external clock output pin.                   |
|       | USCI0_DAT1 | I/O  | MFP6  | USCI0 data 1 pin.                                |
|       | UART1_TXD  | O    | MFP7  | UART1 data transmitter output pin.               |
|       | UART7_TXD  | O    | MFP8  | UART7 data transmitter output pin.               |
|       | BPWM0_CH2  | I/O  | MFP9  | BPWM0 channel 2 output/capture input.            |
|       | TM2_EXT    | I/O  | MFP13 | Timer2 external capture input/toggle output pin. |
| PA.10 | PA.10      | I/O  | MFP0  | General purpose digital I/O pin.                 |
|       | ACMP1_P0   | A    | MFP1  | Analog comparator 1 positive input 0 pin.        |
|       | EBI_nWR    | O    | MFP2  | EBI write enable output pin.                     |
|       | USCI0_DAT0 | I/O  | MFP6  | USCI0 data 0 pin.                                |
|       | UART6_RXD  | I    | MFP8  | UART6 data receiver input pin.                   |
|       | BPWM0_CH1  | I/O  | MFP9  | BPWM0 channel 1 output/capture input.            |
|       | TM1_EXT    | I/O  | MFP13 | Timer1 external capture input/toggle output pin. |
| PA.11 | PA.11      | I/O  | MFP0  | General purpose digital I/O pin.                 |
|       | ACMP0_P0   | A    | MFP1  | Analog comparator 0 positive input 0 pin.        |
|       | EBI_nRD    | O    | MFP2  | EBI read enable output pin.                      |
|       | USCI0_CLK  | I/O  | MFP6  | USCI0 clock pin.                                 |
|       | UART6_TXD  | O    | MFP8  | UART6 data transmitter output pin.               |
|       | BPWM0_CH0  | I/O  | MFP9  | BPWM0 channel 0 output/capture input.            |
|       | TM0_EXT    | I/O  | MFP13 | Timer0 external capture input/toggle output pin. |
| PA.12 | PA.12      | I/O  | MFP0  | General purpose digital I/O pin.                 |

|       | Pin Name     | Type | MFP   | Description                                   |
|-------|--------------|------|-------|-----------------------------------------------|
|       | UART4_TXD    | O    | MFP3  | UART4 data transmitter output pin.            |
|       | I2C1_SCL     | I/O  | MFP4  | I2C1 clock pin.                               |
|       | BPWM1_CH2    | I/O  | MFP11 | BPWM1 channel 2 output/capture input.         |
| PA.13 | PA.13        | I/O  | MFP0  | General purpose digital I/O pin.              |
|       | UART4_RXD    | I    | MFP3  | UART4 data receiver input pin.                |
|       | I2C1_SDA     | I/O  | MFP4  | I2C1 data input/output pin.                   |
|       | BPWM1_CH3    | I/O  | MFP11 | BPWM1 channel 3 output/capture input.         |
| PA.14 | PA.14        | I/O  | MFP0  | General purpose digital I/O pin.              |
|       | UART0_TXD    | O    | MFP3  | UART0 data transmitter output pin.            |
|       | BPWM1_CH4    | I/O  | MFP11 | BPWM1 channel 4 output/capture input.         |
| PA.15 | PA.15        | I/O  | MFP0  | General purpose digital I/O pin.              |
|       | UART0_RXD    | I    | MFP3  | UART0 data receiver input pin.                |
|       | BPWM1_CH5    | I/O  | MFP11 | BPWM1 channel 5 output/capture input.         |
| PB.0  | PB.0         | I/O  | MFP0  | General purpose digital I/O pin.              |
|       | ADC0_CH0     | A    | MFP1  | ADC0 channel 0 analog input.                  |
|       | EBI_ADR9     | O    | MFP2  | EBI address bus bit 9.                        |
|       | UART2_RXD    | I    | MFP7  | UART2 data receiver input pin.                |
|       | SPI0_I2SMCLK | I/O  | MFP8  | SPI0 I <sup>2</sup> S master clock output pin |
|       | I2C1_SDA     | I/O  | MFP9  | I2C1 data input/output pin.                   |
|       | QSPI0_MOSI1  | I/O  | MFP10 | Quad SPI0 MOSI1 (Master Out, Slave In) pin.   |
|       | PWM0_CH5     | I/O  | MFP11 | PWM0 channel 5 output/capture input.          |
|       | PWM1_CH5     | I/O  | MFP12 | PWM1 channel 5 output/capture input.          |
|       | PWM0_BRAKE1  | I    | MFP13 | PWM0 Brake 1 input pin.                       |
| PB.1  | PB.1         | I/O  | MFP0  | General purpose digital I/O pin.              |
|       | ADC0_CH1     | A    | MFP1  | ADC0 channel 1 analog input.                  |
|       | EBI_ADR8     | O    | MFP2  | EBI address bus bit 8.                        |
|       | UART2_TXD    | O    | MFP7  | UART2 data transmitter output pin.            |
|       | USC11_CLK    | I/O  | MFP8  | USC11 clock pin.                              |
|       | I2C1_SCL     | I/O  | MFP9  | I2C1 clock pin.                               |
|       | QSPI0_MISO1  | I/O  | MFP10 | Quad SPI0 MISO1 (Master In, Slave Out) pin.   |
|       | PWM0_CH4     | I/O  | MFP11 | PWM0 channel 4 output/capture input.          |
|       | PWM1_CH4     | I/O  | MFP12 | PWM1 channel 4 output/capture input.          |

## 6 FUNCTIONAL DESCRIPTION

### 6.1 Arm® Cortex®-M0 Core

The Cortex®-M0 processor is a configurable, multistage, 32-bit RISC processor, which has an AMBA AHB-Lite interface and includes an NVIC component. It also has optional hardware debug functionality. The processor can execute Thumb code and is compatible with other Cortex®-M profile processor. The profile supports two modes -Thread mode and Handler mode. Handler mode is entered as a result of an exception. An exception return can only be issued in Handler mode. Thread mode is entered on Reset, and can be entered as a result of an exception return. Figure 6-1 shows the functional controller of processor.

Figure 6-1 Functional Block Diagram

The implemented device provides:

- A low gate count processor:
  - Arm®6-M Thumb® instruction set
  - Thumb-2 technology
  - Arm®6-M compliant 24-bit SysTick timer
  - A 32-bit hardware multiplier
  - System interface supported with little-endian data accesses
  - Ability to have deterministic, fixed-latency, interrupt handling
  - Load/store-multiples and multicycle-multiplies that can be abandoned and restarted to facilitate rapid interrupt handling
  - C Application Binary Interface compliant exception model. This is the Armv6-M, C Application Binary Interface (C-ABI) compliant exception model that enables the use of pure C functions as interrupt handlers
  - Low Power Sleep mode entry using the Wait For Interrupt (WFI), Wait For Event (WFE) instructions, or return from interrupt sleep-on-exit feature
- NVIC:
  - 32 external interrupt inputs, each with four levels of priority

- Dedicated Non-maskable Interrupt (NMI) input
- Supports for both level-sensitive and pulse-sensitive interrupt lines
- Supports Wake-up Interrupt Controller (WIC) and, providing Ultra-low Power Sleep mode
- Debug support:
  - Four hardware breakpoints
  - Two watchpoints
  - Program Counter Sampling Register (PCSR) for non-intrusive code profiling
  - Single step and vector catch capabilities
- Bus interfaces:
  - Single 32-bit AMBA-3 AHB-Lite system interface that provides simple integration to all system peripherals and memory
  - Single 32-bit slave port that supports the DAP (Debug Access Port)

## 6.2 Clock Controller

### 6.2.1 Overview

The clock controller generates clocks for the whole chip, including system clocks and all peripheral clocks. The clock controller also implements the power control function with the individually clock ON/OFF control, clock source selection and a clock divider. The chip will not enter Power-down mode until CPU sets the Power-down enable bit PDEN(CLK\_PWRCTL[7]) and Cortex<sup>®</sup>-M0 core executes the WFI instruction. After that, chip enters Power-down mode and wait for wake-up interrupt source triggered to leave Power-down mode. In Power-down mode, the clock controller turns off the 4~32 MHz external high speed crystal (HXT), 48 MHz internal high speed RC oscillator (HIRC) and Programmable PLL output clock frequency (PLLFOUT) to reduce the overall system power consumption. Figure 6.2-1 and Figure 6.2-2 shows the clock generator and the overview of the clock source control.

Figure 6.2-1 Clock Generator Global View Diagram (1/2)

Figure 6.2-2 Clock Generator Global View Diagram (2/2)

## 6.2.2 Clock Generator

The clock generator consists of 6 clock sources, which are listed below:

- 32.768 kHz external low speed crystal oscillator (LXT)
- 4~32 MHz external high speed crystal oscillator (HXT)
- Programmable PLL output clock frequency (PLLFOUT), PLL source can be selected from external 4~32 MHz external high speed crystal (HXT) or 48 MHz internal high speed oscillator (HIRC/4)
- 48 MHz internal high speed RC oscillator (HIRC)
- 38.4 kHz internal low speed RC oscillator (LIRC)

Figure 6.2-3 Clock Generator Block Diagram

### 6.2.3 System Clock and SysTick Clock

The system clock has 5 clock sources, which were generated from clock generator block. The clock source switch depends on the register HCLKSEL (CLK\_CLKSEL0[2:0]). The block diagram is shown in Figure 6.2-4

Figure 6.2-4 System Clock Block Diagram

There are two clock fail detectors to observe HXT and LXT clock source and they have individual enable and interrupt control. When HXT detector is enabled, the HIRC clock is enabled automatically. When LXT detector is enabled, the LIRC clock is enabled automatically.

When HXT clock detector is enabled, the system clock will auto switch to HIRC if HXT clock stop being detected on the following condition: system clock source comes from HXT or system clock source comes from PLL with HXT as the input of PLL. If HXT clock stop condition is detected, the HXTFIF (CLK\_CLKDSTS[0]) is set to 1 and chip will enter interrupt if HXTFIEN (CLK\_CLKDCTL[5]) is set to 1. User can try to recover HXT by disable HXT and enable HXT again to check if the clock stable bit is set to 1 or not. If HXT clock stable bit is set to 1, it means HXT is recover to oscillate after re-enable action and user can switch system clock to HXT again.

The HXT clock stop detect and system clock switch to HIRC procedure is shown in Figure 6.2-5.

Figure 6.2-5 HXT Stop Protect Procedure

When LXT clock detector is enabled, the system clock will auto switch to LIRC if LXT clock stop being detected when system clock source comes from LXT. If LXT clock stop condition is detected, the LXTFIF (CLK\_CLKDSTS[1]) is set to 1 and chip will enter interrupt if LXTFIEN (CLK\_CLKDCTL[13]) is set to 1. User can try to recover LXT by disable LXT and enable LXT again to check if the clock stable bit is set to 1 or not. If LXT clock stable bit is set to 1, it means LXT is recover to oscillate after re-enable action and user can switch system clock to LXT again.

The LXT clock stop detect and system clock switch to LIRC procedure is shown in Figure 6.2-6.

Figure 6.2-6 LXT Stop Protect Procedure

The clock source of SysTick in Cortex<sup>®</sup>-M0 core can use CPU clock or external clock (SYST\_CTRL[2]). If using external clock, the SysTick clock (STCLK) has 5 clock sources. The clock source switch depends on the setting of the register STCLKSEL (CLK\_CLKSEL0[5:3]). The block diagram is shown in Figure 6.2-7.

Figure 6.2-7 SysTick Clock Control Block Diagram

#### 6.2.4 Peripherals Clock

The peripherals clock has different clock source switch setting, which depends on the different peripheral. Please refer to the CLK\_CLKSELx register description.

#### 6.2.5 Power-down Mode Clock

When entering Power-down mode, system clocks, some clock sources and some peripheral clocks are disabled. Some clock sources and peripherals clock are still active in Power-down mode.

For these clocks, which still keep active, are listed below:

- Clock Generator
  - 38.4 kHz internal low speed RC oscillator (LIRC) clock
  - 32.768 kHz external low speed crystal oscillator (LXT) clock
- Peripherals Clock (When the modules adopt LXT or LIRC as clock source)

### 6.2.6 Clock Output

This device is equipped with a power-of-2 frequency divider which is composed by 16 chained divide-by-2 shift registers. One of the 16 shift register outputs selected by a sixteen to one multiplexer is reflected to CLKO function pin. Therefore there are 16 options of power-of-2 divided clocks with the frequency from  $F_{in}/2^1$  to  $F_{in}/2^{16}$  where  $F_{in}$  is input clock frequency to the clock divider.

The output formula is  $F_{out} = F_{in}/2^{(N+1)}$ , where  $F_{in}$  is the input clock frequency,  $F_{out}$  is the clock divider output frequency and N is the 4-bit value in FREQSEL (CLK\_CLKOCTL[3:0]).

When writing 1 to CLKOE (CLK\_CLKOCTL[4]), the chained counter starts to count. When writing 0 to CLKOE (CLK\_CLKOCTL[4]), the chained counter continuously runs till divided clock reaches low state and stays in low state.

Figure 6.2-8 Clock Output Block Diagram

### 6.2.7 USB Clock Source

The clock source of USB D is generated from 48 MHz HIRC or programmable PLL output. The generated clocks are shown in Figure 6.2-9.

USB DIV is the clock divider output frequency, the output formula is  
 (PLL FOUT frequency) / (USB DIV + 1).

Figure 6.2-9 USBD Clock Source

## 6.3 System Manager

### 6.3.1 Overview

System management includes the following sections:

- System Reset
- System Power Distribution
- SRAM Memory Organization
- System Timer (SysTick)
- Nested Vectored Interrupt Controller (NVIC)
- System Control register

### 6.3.2 System Reset

The system reset can be issued by one of the events listed below. These reset event flags can be read from SYS\_RSTSTS register to determine the reset source. Hardware reset sources are from peripheral signals. Software reset can trigger reset through setting control registers.

- Hardware Reset Sources
  - Power-on Reset
  - Low level on the nRESET pin
  - Watchdog Time-out Reset and Window Watchdog Reset (WDT/WWDT Reset)
  - Low Voltage Reset (LVR)
  - Brown-out Detector Reset (BOD Reset)
  - CPU Lockup Reset
- Software Reset Sources
  - CHIP Reset will reset whole chip by writing 1 to CHIPRST (SYS\_IPRST0[0])
  - MCU Reset to reboot but keeping the booting setting from APROM or LDROM by writing 1 to SYSRESETREQ (AIRCR[2])
  - CPU Reset for Cortex<sup>®</sup>-M0 core Only by writing 1 to CPURST (SYS\_IPRST0[1])
  - nRESET glitch filter time 32us

Figure 6.3-1 System Reset Sources

There are a total of 9 reset sources in the NuMicro® family. In general, CPU reset is used to reset Cortex®-M0 only; the other reset sources will reset Cortex®-M0 and all peripherals. However, there are small differences between each reset source and they are listed in Table 6.3-1.

| Reset Sources Register    | POR                 | NRESET              | WDT                 | LVR                 | BOD                 | Lockup              | CHIP                | MCU                 | CPU       |
|---------------------------|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|---------------------|-----------|

|--------------------------------------------------------------------|-------------|
| Note: '-' means that the value of register keeps original setting. |             |

Table 6.3-1 Reset Value of Registers

6.3.2.1 nRESET Reset

The nRESET reset means to generate a reset signal by pulling low nRESET pin, which is an asynchronous reset input pin and can be used to reset system at any time. When the nRESET voltage is lower than 0.2 V<sub>DD</sub> and the state keeps longer than 32 us (glitch filter), chip will be reset. The nRESET reset will control the chip in reset state until the nRESET voltage rises above 0.7 V<sub>DD</sub> and the state keeps longer than 32 us (glitch filter). The PINRF(SYS\_RSTSTS[1]) will be set to 1 if the previous reset source is nRESET reset. Table 6.3-2 shows the nRESET reset waveform.

Figure 6.3-2 nRESET Reset Waveform

6.3.2.2 Power-on Reset (POR)

The Power-on reset (POR) is used to generate a stable system reset signal and forces the system to be reset when power-on to avoid unexpected behavior of MCU. When applying the power to MCU, the POR module will detect the rising voltage and generate reset signal to system until the voltage is ready for MCU operation. At POR reset, the PORF(SYS\_RSTSTS[0]) will be set to 1 to indicate there is a POR reset event. The PORF(SYS\_RSTSTS[0]) bit can be cleared by writing 1 to it. Figure 6.3-3 shows the power-on reset waveform.

Figure 6.3-3 Power-on Reset (POR) Waveform

### 6.3.2.3 Low Voltage Reset (LVR)

If the Low Voltage Reset function is enabled by setting the Low Voltage Reset Enable Bit LVREN (SYS\_BODCTL[7]) to 1, after 200us delay, LVR detection circuit will be stable and the LVR function will be active. Then LVR function will detect  $AV_{DD}$  during system operation. When the  $AV_{DD}$  voltage is lower than  $V_{LVR}$  and the state keeps longer than De-glitch time set by LVRDGSEL (SYS\_BODCTL[14:12]), chip will be reset. The LVR reset will control the chip in reset state until the  $AV_{DD}$  voltage rises above  $V_{LVR}$  and the state keeps longer than De-glitch time set by LVRDGSEL (SYS\_BODCTL[14:12]). The default setting of Low Voltage Reset is enabled without De-glitch function. Figure 6.3-4 shows the Low Voltage Reset waveform.

Figure 6.3-4 Low Voltage Reset (LVR) Waveform

### 6.3.2.4 Brown-out Detector Reset (BOD Reset)

If the Brown-out Detector (BOD) function is enabled by setting the Brown-out Detector Enable Bit BODEN (SYS\_BODCTL[0]), Brown-out Detector function will detect  $AV_{DD}$  during system operation. When the  $AV_{DD}$  voltage is lower than  $V_{BOD}$  which is decided by BODEN and BODVL (SYS\_BODCTL[16]) and the state keeps longer than De-glitch time set by BODDGSEL (SYS\_BODCTL[10:8]), chip will be reset. The BOD reset will control the chip in reset state until the  $AV_{DD}$  voltage rises above  $V_{BOD}$  and the state keeps longer than De-glitch time set by BODDGSEL. The default value of BODEN, BODVL and BODRSTEN (SYS\_BODCTL[3]) is set by Flash controller user configuration register CBODEN (CONFIG0 [19]), CBOV (CONFIG0 [23:21]) and CBORST (CONFIG0[20]) respectively. User can determine the initial BOD setting by setting the CONFIG0 register. Figure 6.3-5 shows the Brown-out Detector waveform.

Figure 6.3-5 Brown-out Detector (BOD) Waveform

#### 6.3.2.5 Watchdog Timer Reset (WDT)

In most industrial applications, system reliability is very important. To automatically recover the MCU from failure status is one way to improve system reliability. The watchdog timer(WDT) is widely used to check if the system works fine. If the MCU is crashed or out of control, it may cause the watchdog time-out. User may decide to enable system reset during watchdog time-out to recover the system and take action for the system crash/out-of-control after reset.

Software can check if the reset is caused by watchdog time-out to indicate the previous reset is a watchdog reset and handle the failure of MCU after watchdog time-out reset by checking WDTRF(SYS\_RSTSTS[2]).

#### 6.3.2.6 CPU Lockup Reset

CPU enters lockup status after CPU produces hardfault at hardfault handler and chip gives immediate indication of seriously errant kernel software. This is the result of the CPU being locked because of an unrecoverable exception following the activation of the processor's built in system state protection hardware. When chip enters debug mode, the CPU lockup reset will be ignored.

#### 6.3.2.7 CPU Reset, CHIP Reset and MCU Reset

The CPU Reset means only Cortex<sup>®</sup>-M0 core is reset and all other peripherals remain the same status after CPU reset. User can set the CPURST(SYS\_IPRST0[1]) to 1 to assert the CPU Reset signal.

The CHIP Reset is same with Power-on Reset. The CPU and all peripherals are reset and BS(FMC\_ISPCTL[1]) bit is automatically reloaded from CONFIG0 setting. User can set the CHIPRST(SYS\_IPRST0[0]) to 1 to assert the CHIP Reset signal.

The MCU Reset is similar with CHIP Reset. The difference is that BS(FMC\_ISPCTL[1]) will not be reloaded from CONFIG0 setting and keep its original software setting for booting from APROM or LDROM. User can set the SYSRESETREQ(AIRCR[2]) to 1 to assert the MCU Reset.

### 6.3.3 System Power Distribution

In this chip, power distribution is divided into three segments:

- Analog power from  $AV_{DD}$  and  $AV_{SS}$  provides the power for analog components operation.
- Digital power from  $V_{DD}$  and  $V_{SS}$  supplies the power to the internal regulator which provides a fixed 1.8V power for digital operation and I/O pins.
- USB transceiver power from  $V_{BUS}$  offers the power for operating the USB transceiver.

The outputs of internal voltage regulators, LDO and  $V_{DD}$ , require an external capacitor which should be located close to the corresponding pin. Figure 6.3-6 shows the NuMicro® M031 power distribution.

Figure 6.3-6 NuMicro® M031 Power Distribution Diagram

### 6.3.4 Power Modes and Wake-up Sources

The M031/M032 series has power manager unit to support several operating modes for saving power. Table 6.3-2 lists all power mode in the M031/M032 series.

| Mode        | CPU Operating Maximum Speed ( MHz) | LDO_CAP(V) | Clock Disable                                |
|-------------|------------------------------------|------------|----------------------------------------------|
| Normal mode | 72 MHz at 2.0V-3.6V                | 1.8        | All clocks are disabled by control register. |

|                 |                            |     |                                                                                                                                                       |
|-----------------|----------------------------|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 | 48 MHz at 1.8V-3.6V        |     |                                                                                                                                                       |
| Idle mode       | CPU enter Sleep mode       | 1.8 | Only CPU clock is disabled.                                                                                                                           |
| Power-down mode | CPU enters Power-down mode | 1.8 | Most clocks are disabled except LIRC/LXT, and only WDT/Timer/UART/RTC peripheral clocks still enable if their clock sources are selected as LIRC/LXT. |

Table 6.3-2 Power Mode Table

There are different power mode entry settings and leaving condition for each power mode. Table 6.3-3 shows the entry setting for each power mode. When chip power-on, chip is running in normal mode. User can enter each mode by setting SLEEPDEEP (SCR[2]), PDEN (CLK\_PWRCTL[7]) and execute WFI instruction.

| Register/Instruction Mode                       | SLEEPDEEP (SCR[2]) | PDEN (CLK_PWRCTL[7]) | CPU Run WFI Instruction |
|-------------------------------------------------|--------------------|----------------------|-------------------------|
| Normal mode                                     | 0                  | 0                    | NO                      |
| Idle mode<br>(CPU enter Sleep mode)             | 0                  | 0                    | YES                     |
| Power-down mode<br>(CPU enters Deep Sleep mode) | 1                  | 1                    | YES                     |

Table 6.3-3 Power Mode Difference Table

There are several wake-up sources in Idle mode and Power-down mode. Table 6.3-4 lists the available clocks for each power mode.

| Power Mode       | Normal Mode                                        | Idle Mode                     | Power-Down Mode                                                                       |
|------------------|----------------------------------------------------|-------------------------------|---------------------------------------------------------------------------------------|
| Definition       | CPU is in active state                             | CPU is in sleep state         | CPU is in sleep state and all clocks stop except LXT and LIRC. SRAM content retained. |
| Entry Condition  | Chip is in normal mode after system reset released | CPU executes WFI instruction. | CPU sets sleep mode enable and power down enable and executes WFI instruction.        |
| Wake-up Sources  | N/A                                                | All interrupts                | WDT, I <sup>2</sup> C, Timer, UART, BOD, GPIO, EINT, USCI, USB, ACMP, and RTC         |
| Available Clocks | All                                                | All except CPU clock          | LXT and LIRC                                                                          |
| After Wake-up    | N/A                                                | CPU back to normal mode       | CPU back to normal mode                                                               |

Table 6.3-4 Power Mode Difference Table

Figure 6.3-7 Power Mode State Machine

1. LXT (32768 Hz XTL) ON or OFF depends on SW setting in normal mode.
2. LIRC (38.4 kHz OSC) ON or OFF depends on S/W setting in normal mode.
3. If TIMER clock source is selected as LIRC/LXT and LIRC/LXT is on.
4. If WDT clock source is selected as LIRC and LIRC is on.
5. If UART clock source is selected as LXT and LXT is on.
6. If RTC clock source is selected as LIRC/LXT and LIRC/LXT is on.

|                     | Normal Mode | Idle Mode | Power-Down Mode     |
|---------------------|-------------|-----------|---------------------|
| HXT (4~32 MHz XTL)  | ON          | ON        | Halt                |
| HIRC48 (48 MHz OSC) | ON          | ON        | Halt                |

Table 6.3-5 Clocks in Power Modes

**Wake-up sources in Power-down mode:**

WDT, I<sup>2</sup>C, Timer, UART, USCI, BOD, GPIO, USB, ACMP, and RTC.

After chip enters power down, the following wake-up sources can wake chip up to normal mode. Table 6.3-5 lists the condition about how to enter Power-down mode again for each peripheral.

\*User needs to wait this condition before setting PDEN(CLK\_PWRCTL[7]) and execute WFI to enter Power-down mode.

| Wake-Up Source | Wake-Up Condition                        | System Can Enter Power-Down Mode Again Condition*                                    |
|----------------|------------------------------------------|--------------------------------------------------------------------------------------|
| BOD            | Brown-Out Detector Interrupt             | After software writes 1 to clear (SYS_BODCTL[4]).                                    |
| INT            | External Interrupt                       | After software write 1 to clear the Px_INTSRC[n] bit.                                |
| GPIO           | GPIO Interrupt                           | After software write 1 to clear the Px_INTSRC[n] bit.                                |
| TIMER          | Timer Interrupt                          | After software writes 1 to clear TWKF (TIMERx_INTSTS[1]) and TIF (TIMERx_INTSTS[0]). |
| WDT            | WDT Interrupt                            | After software writes 1 to clear WKF (WDT_CTL[5]) (Write Protect).                   |
| RTC            | Alarm Interrupt                          | After software writes 1 to clear ALMIF (RTC_INTSTS[0]).                              |
|                | Time Tick Interrupt                      | After software writes 1 to clear TICKIF (RTC_INTSTS[1]).                             |
| UART0/1/4/5    | nCTS wake-up                             | After software writes 1 to clear CTSWKF (UARTx_WKSTS[0]).                            |
|                | Incoming Data wake-up                    | After software writes 1 to clear DATWKF (UARTx_WKSTS[1]).                            |
|                | Received FIFO Threshold Wake-up          | After software writes 1 to clear RFRTWKF (UARTx_WKSTS[2]).                           |
|                | RS-485 AAD Mode Wake-up                  | After software writes 1 to clear RS485WKF (UARTx_WKSTS[3]).                          |
|                | Received FIFO Threshold Time-out Wake-up | After software writes 1 to clear TOUTWKF (UARTx_WKSTS[4]).                           |
| UART2/3/6/7    | nCTS wake-up                             | After software writes 1 to clear CTSWKF (UARTx_WKSTS[0]).                            |
|                | Incoming Data wake-up                    | After software writes 1 to clear DATWKF (UARTx_WKSTS[1]).                            |
| USCI UART      | CTS Toggle                               | After software writes 1 to clear WKF (UARTx_WKSTS[0]).                               |

|                       |                                         |                                                                                                              |
|-----------------------|-----------------------------------------|--------------------------------------------------------------------------------------------------------------|
|                       | Data Toggle                             | After software writes 1 to clear WKF (UART_WKSTS[0]).                                                        |
| USCI I <sup>2</sup> C | Data toggle                             | After software writes 1 to clear WKF (UI2C_WKSTS[0]).                                                        |
|                       | Address match                           | After software writes 1 to clear WKAKDONE (UI2C_PROTSTS[16], and then writes 1 to clear WKF (UI2C_WKSTS[0]). |
| USCI SPI              | SS Toggle                               | After software writes 1 to clear WKF (USPI_WKSTS[0]).                                                        |
| I <sup>2</sup> C      | Address match                           | After software writes 1 to clear WKIF (I2C_WKSTS[0]).                                                        |
| USBD                  | Remote Wake-up                          | After software writes 1 to clear BUSIF (USBD_INTSTS[0]).                                                     |
| ACMP                  | Comparator Power-Down Wake-Up Interrupt | After software writes 1 to clear WKIF0 (ACMP_STATUS[8]) and WKIF1 (ACMP_STATUS[9]).                          |

Table 6.3-6 Condition of Entering Power-down Mode Again

### 6.3.5 System Memory Map

The NuMicro<sup>®</sup> M031/M032 series provides 4G-byte addressing space. The memory locations assigned to each on-chip controllers are shown in Table 6.3-7. The detailed register definition, memory space, and programming will be described in the following sections for each on-chip peripheral. The M031/M032 series only supports little-endian data format.

| Address Space                                            | Token     | Controllers                                      |
|----------------------------------------------------------|-----------|--------------------------------------------------|
| Flash and SRAM Memory Space                              |           |                                                  |
| 0x0000_0000 – 0x0007_FFFF                                | FLASH_BA  | FLASH Memory Space (512 Kbytes)                  |
| 0x2000_0000 – 0x2001_7FFF                                | SRAM0_BA  | SRAM Memory Space (96 Kbytes)                    |
| 0x6000_0000 – 0x6FFF_FFFF                                | EXTMEM_BA | External Memory Space (256 Mbytes)               |
| Peripheral Controllers Space (0x4000_0000 – 0x400F_FFFF) |           |                                                  |
| 0x4000_0000 – 0x4000_01FF                                | SYS_BA    | System Control Registers                         |
| 0x4000_0200 – 0x4000_02FF                                | CLK_BA    | Clock Control Registers                          |
| 0x4000_0300 – 0x4000_03FF                                | NMI_BA    | NMI Control Registers                            |
| 0x4000_4000 – 0x4000_4FFF                                | GPIO_BA   | GPIO Control Registers                           |
| 0x4000_8000 – 0x4000_8FFF                                | PDMA_BA   | Peripheral DMA Control Registers                 |
| 0x4000_C000 – 0x4000_CFFF                                | FMC_BA    | Flash Memory Control Registers                   |
| 0x4001_0000 – 0x4001_0FFF                                | EBI_BA    | External Bus Interface Control Registers         |
| 0x4001_4000 – 0x4001_7FFF                                | HDIV_BA   | Hardware Divider Register                        |
| 0x4003_1000 – 0x4003_1FFF                                | CRC_BA    | CRC Generator Registers                          |
| APB Controllers Space (0x4000_0000 ~ 0x400F_FFFF)        |           |                                                  |
| 0x4004_0000 – 0x4004_0FFF                                | WDT_BA    | Watchdog Timer Control Registers                 |
| 0x4004_1000 – 0x4004_1FFF                                | RTC_BA    | RTC Control Registers                            |
| 0x4004_3000 – 0x4004_3FFF                                | ADC_BA    | Analog-Digital-Converter (ADC) Control Registers |
| 0x4004_5000 – 0x4004_5FFF                                | ACMP01_BA | Analog Comparator 0/ 1 Control Registers         |
| 0x4005_0000 – 0x4005_0FFF                                | TMR01_BA  | Timer0/Timer1 Control Registers                  |
| 0x4005_1000 – 0x4005_1FFF                                | TMR23_BA  | Timer2/Timer3 Control Registers                  |

|                                                      |          |                                                 |
|------------------------------------------------------|----------|-------------------------------------------------|
| 0x4005_8000 – 0x4005_8FFF                            | PWM0_BA  | PWM0 Control Registers                          |
| 0x4005_9000 – 0x4005_9FFF                            | PWM1_BA  | PWM1 Control Registers                          |
| 0x4005_A000 – 0x4005_AFFF                            | BPWM0_BA | BPWM0 Control Registers                         |
| 0x4005_B000 – 0x4005_BFFF                            | BPWM1_BA | BPWM1 Control Registers                         |
| 0x4006_0000 – 0x4006_0FFF                            | QSPI0_BA | QSPI0 Control Registers                         |
| 0x4006_1000 – 0x4006_1FFF                            | SPI0_BA  | SPI0 Control Registers                          |
| 0x4007_0000 – 0x4007_0FFF                            | UART0_BA | UART0 Control Registers                         |
| 0x4007_1000 – 0x4007_1FFF                            | UART1_BA | UART1 Control Registers                         |
| 0x4007_2000 – 0x4007_2FFF                            | UART2_BA | UART2 Control Registers                         |
| 0x4007_3000 – 0x4007_3FFF                            | UART3_BA | UART3 Control Registers                         |
| 0x4007_4000 – 0x4007_4FFF                            | UART4_BA | UART4 Control Registers                         |
| 0x4007_5000 – 0x4007_5FFF                            | UART5_BA | UART5 Control Registers                         |
| 0x4007_6000 – 0x4007_6FFF                            | UART6_BA | UART6 Control Registers                         |
| 0x4007_7000 – 0x4007_7FFF                            | UART7_BA | UART7 Control Registers                         |
| 0x4008_0000 – 0x4008_0FFF                            | I2C0_BA  | I2C0 Control Registers                          |
| 0x4008_1000 – 0x4008_1FFF                            | I2C1_BA  | I2C1 Control Registers                          |
| 0x400C_0000 – 0x400C_0FFF                            | USB_D_BA | USB Device Control Register                     |
| 0x400D_0000 – 0x400D_0FFF                            | USCI0_BA | USCI0 Control Registers                         |
| 0x400D_1000 – 0x400D_1FFF                            | USCI1_BA | USCI1 Control Registers                         |
| System Controllers Space (0xE000_E000 ~ 0xE000_EFFF) |          |                                                 |
| 0xE000_E010 – 0xE000_E0FF                            | SCS_BA   | System Timer Control Registers                  |
| 0xE000_E100 – 0xE000_ECFF                            | SCS_BA   | External Interrupt Controller Control Registers |
| 0xE000_ED00 – 0xE000_ED8F                            | SCS_BA   | System Control Registers                        |

Table 6.3-7 Address Space Assignments for On-Chip Controllers

### 6.3.6 SRAM Memory Organization

The M031 supports embedded SRAM with total 16 Kbytes size

- Supports total 16 Kbytes SRAM
- Supports byte / half word / word write
- Supports oversize response error

Table 6.3-9 shows the SRAM organization of M031. The address between 0x2000\_4000 to 0x3FFF\_FFFF is illegal memory space and chip will enter hardfault if CPU accesses these illegal memory addresses.

Figure 6.3-8 SRAM Memory Organization

### 6.3.7 SRAM Memory Organization with parity function

The M031 supports embedded SRAM with total 96 Kbytes size

- Supports total 96 Kbytes SRAM
- Supports parity error check function for SRAM bank0 section 0(32 Kbytes)
- Supports byte / half word / word write
- Supports oversize response error

Table 6.3-9 shows the SRAM organization of M031. The address between 0x2001\_8000 to 0x3FFF\_FFFF is illegal memory space and chip will enter hardfault if CPU accesses these illegal memory addresses. There are three section in SRAM bank0. The section 0 is addressed to 32 Kbytes with parity function, the section 1 is addressed to 32 Kbytes and the section 2 is addressed to 32 Kbytes. SRAM section 0 has byte parity error check function. When CPU is accessing SRAM section

0, the parity error checking mechanism is dynamic operating. As parity error occurred, the PERRIF (SYS\_SRAM\_STATUS[0]) will be asserted to 1 and the SYS\_SRAM\_ERRADDR register will recode the address with parity error. Chip will enter interrupt when SRAM parity error occurred if PERRIEN (SYS\_SRAM\_INTCTL[0]) is set to 1. When SRAM parity error occurred, chip will stop detecting SRAM parity error until user writes 1 to clear the PERRIF(SYS\_SRAM\_STATUS[0]) bit.

Figure 6.3-10 SRAM Memory Organization

### 6.3.8 Chip Bus Matrix

The M031/M032 series supports Bus Matrix to manage the access arbitration between masters. The access arbitration use round-robin algorithm as the bus priority.

Figure 6.3-9 NuMicro® M031 Bus Matrix Diagram

### 6.3.9 IRC Auto Trim

This chip supports auto-trim function: the HIRC trim (48 MHz RC oscillator), according to the accurate external 32.768 kHz crystal oscillator or internal USB synchronous mode, automatically gets accurate output frequency, 0.25 % deviation within all temperature ranges.

In HIRC case, the system needs an accurate 48 MHz clock. In such case, if neither using use PLL as the system clock source nor soldering 32.768 kHz crystal in system, user has to set REFCKSEL (SYS\_HIRCTIMCTL [10] reference clock selection) to “1”, set FREQSEL (SYS\_HIRCTIMCTL [1:0] trim frequency selection) to “01”, and the auto-trim function will be enabled. Interrupt status bit FREQLOCK (SYS\_HIRCTIMSTS[0] HIRC frequency lock status) “1” indicates the HIRC output frequency is accurate within 0.25% deviation.

### 6.3.10 Register Lock Control

Some of the system control registers need to be protected to avoid inadvertent write and disturb the chip operation. These system control registers are protected after the power-on reset till user to disable register protection. For user to program these protected registers, a register protection disable sequence needs to be followed by a special programming. The register protection disable sequence is writing the data “59h”, “16h” “88h” to the register SYS\_REGLCTL address at 0x4000\_0100 continuously. Any different data value, different sequence or any other write to other address during these three data writing will abort the whole sequence. All protected control registers are noted “(Write Protect)” and add an note “**Note:** This bit is write protected. Refer to the SYS\_REGLCTL register “ in register description field.

### 6.3.11 UART0\_TXD/USC10\_DAT0 modulation with PWM

This chip supports UART0\_TXD/USC10\_DAT0 to modulate with PWM channel. User can set MODPWMSEL(SYS\_MODCTL[7:4]) to choose which PWM0 channel to modulate with UART0\_TXD/USC10\_DAT0 and set MODEN(SYS\_MODCTL[0]) to enable modulation function. User can set TXDINV(UART\_LINE[8]) to inverse UART0\_TXD or DATOINV(UUART\_LINECTL[5]) to inverse USC10\_DAT0 before modulating with PWM.

Figure 6.3-11 UART0\_TXD/USC10\_DAT0 Modulated with PWM Channel

### 6.3.12 System Timer (SysTick)

The Cortex®-M0 includes an integrated system timer, SysTick, which provides a simple, 24-bit clear-on-write, decrementing, wrap-on-zero counter with a flexible control mechanism. The counter can be used as a Real Time Operating System (RTOS) tick timer or as a simple counter.

When system timer is enabled, it will count down from the value in the SysTick Current Value Register (SYST\_VAL) to zero, and reload (wrap) to the value in the SysTick Reload Value Register (SYST\_LOAD) on the next clock cycle, and then decrement on subsequent clocks. When the counter transitions to zero, the COUNTFLAG status bit is set. The COUNTFLAG bit clears on reads.

The SYST\_VAL value is UNKNOWN on reset. Software should write to the register to clear it to zero before enabling the feature. This ensures the timer will count from the SYST\_LOAD value rather than an arbitrary value when it is enabled.

If the SYST\_LOAD is zero, the timer will be maintained with a current value of zero after it is reloaded with this value. This mechanism can be used to disable the feature independently from the timer enable bit.

For more detailed information, please refer to the “Arm® Cortex®-M0 Technical Reference Manual” and “Arm® v6-M Architecture Reference Manual”.

### 6.3.13 Nested Vectored Interrupt Controller (NVIC)

The Cortex®-M0 provides an interrupt controller as an integral part of the exception mode, named as “Nested Vectored Interrupt Controller (NVIC)”, which is closely coupled to the processor core and provides following features:

- Nested and Vectored interrupt support
- Automatic processor state saving and restoration
- Reduced and deterministic interrupt latency

The NVIC prioritizes and handles all supported exceptions. All exceptions are handled in “Handler Mode”. This NVIC architecture supports 32 (IRQ[31:0]) discrete interrupts with 4 levels of priority. All of the interrupts and most of the system exceptions can be configured to different priority levels. When an interrupt occurs, the NVIC will compare the priority of the new interrupt to the current running one’s priority. If the priority of the new interrupt is higher than the current one, the new interrupt handler will override the current handler.

When an interrupt is accepted, the starting address of the interrupt service routine (ISR) is fetched from a vector table in memory. There is no need to determine which interrupt is accepted and branch to the starting address of the correlated ISR by software. While the starting address is fetched, NVIC will also automatically save processor state including the registers “PC, PSR, LR, R0~R3, R12” to the stack. At the end of the ISR, the NVIC will restore the mentioned registers from stack and resume the normal execution. Thus it will take less and deterministic time to process the interrupt request.

The NVIC supports “Tail Chaining” which handles back-to-back interrupts efficiently without the overhead of states saving and restoration and therefore reduces delay time in switching to pending ISR at the end of current ISR. The NVIC also supports “Late Arrival” which improves the efficiency of concurrent ISRs. When a higher priority interrupt request occurs before the current ISR starts to execute (at the stage of state saving and starting address fetching), the NVIC will give priority to the higher one without delay penalty. Thus it advances the real-time capability.

For more detailed information, please refer to the “Arm® Cortex®-M0 Technical Reference Manual” and “Arm® v6-M Architecture Reference Manual”.

#### 6.3.13.1 Exception Model and System Interrupt Map

Table 6.3-8 lists the exception model supported by the M031/M032 series. Software can set four levels of priority on some of these exceptions as well as on all interrupts. The highest user-configurable priority is denoted as “0” and the lowest priority is denoted as “3”. The default priority of all the user-configurable interrupts is “0”. Note that priority “0” is treated as the fourth priority on the system, after three system exceptions “Reset”, “NMI” and “Hard Fault”.

| Exception Name | Vector Number | Priority     |
|----------------|---------------|--------------|
| Reset          | 1             | -3           |
| NMI            | 2             | -2           |
| Hard Fault     | 3             | -1           |
| Reserved       | 4 ~ 10        | Reserved     |
| SVCall         | 11            | Configurable |
| Reserved       | 12 ~ 13       | Reserved     |
| PendSV         | 14            | Configurable |

|                          |         |              |
|--------------------------|---------|--------------|
| SysTick                  | 15      | Configurable |
| Interrupt (IRQ0 ~ IRQ31) | 16 ~ 47 | Configurable |

Table 6.3-8 Exception Model

| Vector Number | Interrupt Number (Bit In Registers) | Interrupt Name | Interrupt Description                      |
|---------------|-------------------------------------|----------------|--------------------------------------------|
| 0 ~ 15        | -                                   | -              | System exceptions                          |
| 16            | 0                                   | BODOUT         | Brown-Out low voltage detected interrupt   |
| 17            | 1                                   | WDT_INT        | Watchdog Timer interrupt                   |
| 18            | 2                                   | EINT024        | External interrupt from EINT0,2,4.         |
| 19            | 3                                   | EINT135        | External interrupt from EINT1,3,5          |
| 20            | 4                                   | GPABGH_INT     | External interrupt from PA, PB, PG, PH pin |
| 21            | 5                                   | GPCDEF_INT     | External interrupt from PC, PD, PE, PF pin |
| 22            | 6                                   | PWM0_INT       | PWM0 interrupt                             |
| 23            | 7                                   | PWM1_INT       | PWM1 interrupt                             |
| 24            | 8                                   | TMR0_INT       | Timer 0 interrupt                          |
| 25            | 9                                   | TMR1_INT       | Timer 1 interrupt                          |
| 26            | 10                                  | TMR2_INT       | Timer 2 interrupt                          |
| 27            | 11                                  | TMR3_INT       | Timer 3 interrupt                          |
| 28            | 12                                  | UART02_INT     | UART0,2 interrupt                          |

Table 6.3-9 Interrupt Number Table

### 6.3.13.2 Vector Table

When an interrupt is accepted, the processor will automatically fetch the starting address of the interrupt service routine (ISR) from a vector table in memory. For Armv6-M, the vector table base address is fixed at 0x00000000. The vector table contains the initialization value for the stack pointer on reset, and the entry point addresses for all exception handlers. The vector number on previous page defines the order of entries in the vector table associated with exception handler entry as illustrated in previous section.

| Vector Table Word Offset | Description                                      |
|--------------------------|--------------------------------------------------|
| 0                        | SP_main – The Main stack pointer                 |
| Vector Number            | Exception Entry Pointer using that Vector Number |

Table 7.2-10 Vector Figure Format

### 6.3.13.3 Operation Description

NVIC interrupts can be enabled and disabled by writing to their corresponding Interrupt Set-Enable or Interrupt Clear-Enable register bit-field. The registers use a write-1-to-enable and write-1-to-clear policy, both registers reading back the current enabled state of the corresponding interrupts. When an interrupt is disabled, interrupt assertion will cause the interrupt to become Pending, however, the interrupt will not be activated. If an interrupt is Active when it is disabled, it remains in its Active state until cleared by reset or an exception return. Clearing the enable bit prevents new activations of the associated interrupt.

NVIC interrupts can be pended/un-pended using a complementary pair of registers to those used to enable/disable the interrupts, named the Set-Pending Register and Clear-Pending Register respectively. The registers use a write-1-to-enable and write-1-to-clear policy, both registers reading back the current pended state of the corresponding interrupts. The Clear-Pending Register has no effect on the execution status of an Active interrupt.

NVIC interrupts are prioritized by updating an 8-bit field within a 32-bit register (each register supporting four interrupts).

The general registers associated with the NVIC are all accessible from a block of memory in the System Control Space and will be described in next section.

## 6.4 Flash Memory Controller (FMC)

### 6.4.1 Overview

This chip is equipped with 16/32/64/128/256/512 Kbytes on-chip embedded Flash (the chip with 512 Kbytes consists of two 256 Kbytes BANK0 and BANK1). A User Configuration block is provided for system initialization. A loader ROM (LDROM) is used for In-System-Programming (ISP) function. A security protection ROM (SPROM) can conceal user program. For M031xG/I and M032xG/I, a 4 Kbytes cache with zero wait cycle is implemented to improve the performance of code/data fetching. This chip also supports In-Application-Programming (IAP) function. User switches the code executing without the chip reset after the embedded Flash is updated.

## 6.5 General Purpose I/O (GPIO)

### 6.5.1 Overview

This chip has up to 111 General Purpose I/O pins to be shared with other function pins depending on the chip configuration. These 111 pins are arranged in 5 ports named as PA, PB, PC, PD, PE, PF, PG and PH. PA and PB has 16 pins on port. PC has 15 pins on port. PD and PE has 16 pins on port. PF has 14 pins on port. PG has 10 pins on port. PH has 8 pins on port. Each of the 111 pins is independent and has the corresponding register bits to control the pin mode function and data.

The I/O type of each of I/O pins can be configured by software individually as Input, Push-pull output, Open-drain output or Quasi-bidirectional mode. After the chip is reset, the I/O mode of all pins are depending on CIOINI (CONFIG0[10]).

### 6.5.2 Features

- Four I/O modes:
  - Quasi-bidirectional mode
  - Push-Pull Output mode
  - Open-Drain Output mode
  - Input only with high impedance mode
- I/O pin can be configured as interrupt source with edge/level setting
- Input schmitt trigger function
- Configurable default I/O mode of all pins after reset by CIOINI (CONFIG0[10]) setting
  - CIOINI = 0, all GPIO pins in Quasi-bidirectional mode after chip reset
  - CIOINI = 1, all GPIO pins in input mode after chip reset
- I/O pin internal pull-up resistor enabled only in Quasi-bidirectional I/O mode
- Enabling the pin interrupt function will also enable the wake-up function

## 6.6 PDMA Controller (PDMA)

### 6.6.1 Overview

The peripheral direct memory access (PDMA) controller is used to provide high-speed data transfer. The PDMA controller can transfer data from one address to another without CPU intervention. This has the benefit of reducing the workload of CPU and keeps CPU resources free for other applications. The PDMA controller has a total of 9 channels and each channel can perform transfer between memory and peripherals or between memory and memory.

### 6.6.2 Features

- Supports 9 independently configurable channels
- Selectable 2 level of priority (fixed priority or round-robin priority)
- Supports transfer data width of 8, 16, and 32 bits
- Supports source and destination address increment size can be byte, half-word, word or no increment
- Supports software and I<sup>2</sup>C, SPI/I<sup>2</sup>S, UART, USCI, ADC, PWM , QSPI and TIMER request
- Supports Scatter-Gather mode to perform sophisticated transfer through the use of the descriptor link list table
- Supports single and burst transfer type
- Supports time-out function on channel 0 and channel1

## 6.7 Timer Controller (TMR)

### 6.7.1 Overview

The timer controller includes four 32-bit timers, Timer0 ~ Timer3, allowing user to easily implement a timer control for applications. The timer can perform functions, such as frequency measurement, delay timing, clock generation, and event counting by external input pins, and interval measurement by external capture pins.

### 6.7.2 Features

#### 6.7.2.1 Timer Function Features

- Four sets of 32-bit timers, each timer having one 24-bit up counter and one 8-bit prescale counter
- Independent clock source for each timer
- Provides one-shot, periodic, toggle-output and continuous counting operation modes
- 24-bit up counter value is readable through CNT (TIMERx\_CNT[23:0])
- Supports event counting function
- Supports event counting source from internal USB SOF signal
- 24-bit capture value is readable through CAPDAT (TIMERx\_CAP[23:0])
- Supports external capture pin event for interval measurement
- Supports external capture pin event to reset 24-bit up counter
- Supports internal capture triggered while internal ACMP output signal and LIRC transition
- Supports chip wake-up from Idle/Power-down mode if a timer interrupt signal is generated
- Support Timer0 ~ Timer3 time-out interrupt signal or capture interrupt signal to trigger PWM, ADC, PDMA, BPWM function
- Supports Inter-Timer trigger mode

## 6.8 Watchdog Timer (WDT)

### 6.8.1 Overview

The Watchdog Timer (WDT) is used to perform a system reset when system runs into an unknown state. This prevents system from hanging for an infinite period of time. Besides, this Watchdog Timer supports the function to wake up system from Idle/Power-down mode.

### 6.8.2 Features

- 20-bit free running up counter for WDT time-out interval
- Selectable time-out interval ( $2^4 \sim 2^{20}$ ) and the time-out interval is 416us ~ 27.3 s if WDT\_CLK = 38.4 kHz (LIRC).
- System kept in reset state for a period of  $(1 / \text{WDT\_CLK}) * 63$
- Supports selectable WDT reset delay period, including 1026、130、18 or 3 WDT\_CLK reset delay period
- Supports to force WDT enabled after chip powered on or reset by setting CWDTEN[2:0] in Config0 register
- Supports WDT time-out wake-up function only if WDT clock source is selected as LIRC or LXT.

## 6.9 Window Watchdog Timer (WWDT)

### 6.9.1 Overview

The Window Watchdog Timer (WWDT) is used to perform a system reset within a specified window period to prevent software run to uncontrollable status by any unpredictable condition.

### 6.9.2 Features

- 6-bit down counter value (CNTDAT, WWDT\_CNT[5:0]) and 6-bit compare value (CMPDAT, WWDT\_CTL[21:16]) to make the WWDT time-out window period flexible
- Supports 4-bit value (PSCSEL, WWDT\_CTL[11:8]) to programmable maximum 11-bit prescale counter period of WWDT counter
- WWDT counter suspends in Idle/Power-down mode

## 6.10 Real Time Clock (RTC)

### 6.10.1 Overview

The Real Time Clock (RTC) controller provides the real time and calendar message. The RTC offers programmable time tick and alarm match interrupts. The data format of time and calendar messages are expressed in BCD format. A digital frequency compensation feature is available to compensate external crystal oscillator frequency accuracy.

### 6.10.2 Features

- Supports real time counter in RTC\_TIME (hour, minute, second) and calendar counter in RTC\_CAL (year, month, day) for RTC time and calendar check.
- Supports alarm time (hour, minute, second) and calendar (year, month, day) settings in RTC\_TALM and RTC\_CALM.
- Supports alarm time (hour, minute, second) and calendar (year, month, day) mask enable in RTC\_TAMSK and RTC\_CAMSK.
- Selectable 12-hour or 24-hour time scale in RTC\_CLKFMT register.
- Supports Leap Year indication in RTC\_LEAPYEAR register.
- Supports Day of the Week counter in RTC\_WEEKDAY register.
- Frequency of RTC clock source compensate by RTC\_FREQADJ register.
- All time and calendar message expressed in BCD format.
- Supports periodic RTC Time Tick interrupt with 8 period interval options 1/128, 1/64, 1/32, 1/16, 1/8, 1/4, 1/2 and 1 second.
- Supports RTC Time Tick and Alarm Match interrupt.
- Supports 1 Hz clock output.
- Supports chip wake-up from Idle or Power-down mode while a RTC interrupt signal is generated.

## 6.11 Basic PWM Generator and Capture Timer (BPWM)

### 6.11.1 Overview

The chip provides two BPWM generators — BPWM0 and BPWM1 as shown in BPWM Generator Overview Block Diagram. Each BPWM supports 6 channels of BPWM output or input capture. There is a 12-bit prescaler to support flexible clock to the 16-bit BPWM counter with 16-bit comparator. The BPWM counter supports up, down and up-down counter types, all 6 channels share one counter. BPWM uses the comparator compared with counter to generate events. These events are used to generate BPWM pulse, interrupt and trigger signal for ADC to start conversion. For BPWM output control unit, it supports polarity output, independent pin mask and tri-state output enable.

The BPWM generator also supports input capture function to latch BPWM counter value to corresponding register when input channel has a rising transition, falling transition or both transition is happened.

### 6.11.2 Features

#### 6.11.2.1 BPWM Function Features

- Supports maximum clock frequency up to 144 MHz.
- Supports up to two BPWM modules; each module provides 6 output channels
- Supports independent mode for BPWM output/Capture input channel
- Supports 12-bit prescaler from 1 to 4096
- Supports 16-bit resolution BPWM counter; each module provides 1 BPWM counter
  - Up, down and up/down counter operation type
- Supports mask function and tri-state enable for each BPWM pin
- Supports interrupt in the following events:
  - BPWM counter matches 0, period value or compared value
- Supports trigger ADC in the following events:
  - BPWM counter matches 0, period value or compared value

#### 6.11.2.2 Capture Function Features

- Supports up to 12 capture input channels with 16-bit resolution
- Supports rising or falling capture condition
- Supports input rising/falling capture interrupt
- Supports rising/falling capture with counter reload option

## 6.12 PWM Generator and Capture Timer (PWM)

### 6.12.1 Overview

The chip provides two PWM generators — PWM0 and PWM1. Each PWM supports 6 channels of PWM output or input capture. There is a 12-bit prescaler to support flexible clock to the 16-bit PWM counter with 16-bit comparator. The PWM counter supports up, down and up-down counter types. PWM uses comparator compared with counter to generate events. These events use to generate PWM pulse, interrupt and trigger signal for ADC to start conversion.

The PWM generator supports two standard PWM output modes: Independent mode and Complementary mode, they have difference architecture. In Complementary mode, there are two comparators to generate various PWM pulse with 12-bit dead-time generator. For PWM output control unit, it supports polarity output, independent pin mask and brake functions.

The PWM generator also supports input capture function to latch PWM counter value to the corresponding register when input channel has a rising transition, falling transition or both transition is happened. Capture function also support PDMA to transfer captured data to memory.

### 6.12.2 Features

#### 6.12.2.1 PWM Function Features

- Supports maximum clock frequency up to 144 MHz
- Supports up to two PWM modules, each module provides 6 output channels
- Supports independent mode for PWM output/Capture input channel
- Supports complementary mode for 3 complementary paired PWM output channel
  - Dead-time insertion with 12-bit resolution
  - Two compared values during one period
- Supports 12-bit prescaler from 1 to 4096
- Supports 16-bit resolution PWM counter
  - Up, down and up-down counter operation type
- Supports mask function and tri-state enable for each PWM pin
- Supports brake function
  - Brake source from pin and system safety events (clock failed, Brown-out detection, SRAM parity error and CPU lockup)
  - Noise filter for brake source from pin
  - Edge detect brake source to control brake state until brake interrupt cleared
  - Level detect brake source to auto recover function after brake condition removed
- Supports interrupt on the following events:
  - PWM counter matches 0, period value or compared value
  - Brake condition happened
- Supports trigger ADC on the following events:
  - PWM counter matches 0, period value or compared value

#### 6.12.2.2 Capture Function Features

- Supports up to 12 capture input channels with 16-bit resolution

- Supports rising or falling capture condition
- Supports input rising/falling capture interrupt
- Supports rising/falling capture with counter reload option
- Supports PDMA transfer function for PWM all channels

## 6.13 UART Interface Controller (UART)

### 6.13.1 Overview

The chip provides eight channels of Universal Asynchronous Receiver/Transmitters (UART). The UART controller performs Normal Speed UART and supports flow control function. The UART controller performs a serial-to-parallel conversion on data received from the peripheral and a parallel-to-serial conversion on data transmitted from the CPU. Each UART controller channel supports ten types of interrupts. The UART controller also supports IrDA SIR, RS-485 and Single-wire function modes and auto-baud rate measuring function.

### 6.13.2 Features

- Full-duplex asynchronous communications
- Separates receive and transmit 16/16 bytes or 1/1 byte entry FIFO for data payloads
- Supports hardware auto-flow control
- Programmable receiver buffer trigger level
- Supports programmable baud rate generator for each channel individually
- Supports nCTS, incoming data, Received Data FIFO reached threshold and RS-485 Address Match (AAD mode) wake-up function (Only UART0 /UART1 /UART4 /UART5 with Received Data FIFO reached threshold and RS-485 Address Match (AAD mode) wake-up function)
- Supports 8-bit receiver buffer time-out detection function
- Programmable transmitting data delay time between the last stop and the next start bit by setting DLY (UART\_TOUT [15:8])
- Supports Auto-Baud Rate measurement and baud rate compensation function
  - Support 9600 bps for UART\_CLK is selected LXT. (Only UART0 /UART1 /UART4 /UART5 with this feature)
- Supports break error, frame error, parity error and receive/transmit buffer overflow detection function
- Fully programmable serial-interface characteristics
  - Programmable number of data bit, 5-, 6-, 7-, 8- bit character
  - Programmable parity bit, even, odd, no parity or stick parity bit generation and detection
  - Programmable stop bit, 1, 1.5, or 2 stop bit generation
- Supports IrDA SIR function mode
  - Supports for 3/16 bit duration for normal mode
- Supports RS-485 function mode
  - Supports RS-485 9-bit mode
  - Supports hardware or software enables to program nRTS pin to control RS-485 transmission direction
- Supports PDMA transfer function
- Support Single-wire function mode.

Table 6.13-1 NuMicro® M031/M032 Series UART Features

## 6.14 Serial Peripheral Interface (SPI)

### 6.14.1 Overview

The Serial Peripheral Interface (SPI) applies to synchronous serial data communication and allows full duplex transfer. Devices communicate in Master/Slave mode with the 4-wire bi-direction interface. The chip contains one set of SPI controller performing a serial-to-parallel conversion on data received from a peripheral device, and a parallel-to-serial conversion on data transmitted to a peripheral device. Each SPI controller can be configured as a master or a slave device and supports the PDMA function to access the data buffer. Each SPI controller also supports I<sup>2</sup>S mode to connect external audio CODEC.

### 6.14.2 Features

- SPI Mode
  - Supports one set of SPI controller
  - Supports Master or Slave mode operation
  - Configurable bit length of a transaction word from 8 to 32-bit
  - Provides separate 4-level of 32-bit (or 8-level of 16-bit) transmit and receive FIFO buffers which depends on SPI setting of data width
  - Supports MSB first or LSB first transfer sequence
  - Supports Byte Reorder function
  - Supports Byte or Word Suspend mode
  - Master mode up to 24 MHz and Slave mode up to 16 MHz (when chip works at V<sub>DD</sub> = 1.8~3.6V)
  - Supports one data channel half-duplex transfer
  - Supports receive-only mode
  - Supports PDMA transfer
- I<sup>2</sup>S Mode
  - Supports one set of I<sup>2</sup>S by SPI controller
  - Interface with external audio CODEC
  - Supports Master or Slave mode
  - Capable of handling 8-, 16-, 24- and 32-bit word sizes
  - Supports monaural and stereo audio data
  - Supports PCM mode A, PCM mode B, I<sup>2</sup>S and MSB justified data format
  - Each provides two 4-level FIFO data buffers, one for transmitting and the other for receiving
  - Supports two PDMA requests, one for transmitting and the other for receiving
  - Generates interrupt requests when buffer levels cross a programmable boundary

## 6.15 Quad Serial Peripheral Interface (QSPI)

### 6.15.1 Overview

The Quad Serial Peripheral Interface (QSPI) applies to synchronous serial data communication and allows full duplex transfer. Devices communicate in Master/Slave mode with the 4-wire bi-direction interface. The chip contains one QSPI controller performing a serial-to-parallel conversion on data received from a peripheral device, and a parallel-to-serial conversion on data transmitted to a peripheral device.

The QSPI controller supports 2-bit Transfer mode to perform full-duplex 2-bit data transfer and also supports Dual and Quad I/O Transfer mode and the controller supports the PDMA function to access the data buffer.

### 6.15.2 Features

- Supports one QSPI controller
- Supports Master or Slave mode operation
- Master mode up to 24 MHz and Slave mode up to 16 MHz (when chip works at  $V_{DD} = 1.8\sim 3.6V$ )
- Supports 2-bit Transfer mode
- Supports Dual and Quad I/O Transfer mode
- Configurable bit length of a transaction word from 8 to 32-bit
- Provides separate 8-level depth transmit and receive FIFO buffers
- Supports MSB first or LSB first transfer sequence
- Supports Byte Reorder function
- Supports Byte or Word Suspend mode
- Supports PDMA transfer
- Supports 3-Wire, no slave selection signal, bi-direction interface
- Supports one data channel half-duplex transfer
- Supports receive-only mode

## 6.16 I<sup>2</sup>C Serial Interface Controller (I<sup>2</sup>C)

### 6.16.1 Overview

I<sup>2</sup>C is a two-wire, bi-directional serial bus that provides a simple and efficient method of data exchange between devices. The I<sup>2</sup>C standard is a true multi-master bus including collision detection and arbitration that prevents data corruption if two or more masters attempt to control the bus simultaneously.

There are two sets of I<sup>2</sup>C controllers which support Power-down wake-up function.

### 6.16.2 Features

The I<sup>2</sup>C bus uses two wires (SDA and SCL) to transfer information between devices connected to the bus. The main features of the I<sup>2</sup>C bus include:

- Supports up to two I<sup>2</sup>C ports
- Master/Slave mode
- Bidirectional data transfer between masters and slaves
- Multi-master bus (no central master)
- Supports Standard mode (100 kbps), Fast mode (400 kbps) and Fast mode plus (1 Mbps)
- Arbitration between simultaneously transmitting masters without corruption of serial data on the bus
- Serial clock synchronization allow devices with different bit rates to communicate via one serial bus
- Built-in 14-bit time-out counter requesting the I<sup>2</sup>C interrupt if the I<sup>2</sup>C bus hangs up and timer-out counter overflow
- Programmable clocks allow for versatile rate control
- Supports 7-bit addressing
- Supports multiple address recognition (four slave address with mask option)
- Supports Power-down wake-up function
- Supports PDMA with one buffer capability
- Supports setup/hold time programmable
- Supports Bus Management (SM/PM compatible) function

| Section                       | Sub-Section                                                                                                                                                                                                                                                                                                                                 | M031xB/C/D/E | M031xG/I |

Table 6.16-1 I<sup>2</sup>C Feature Comparison Table at Different Chip

## 6.17 USCI - Universal Serial Control Interface Controller (USCI)

### 6.17.1 Overview

The Universal Serial Control Interface (USCI) is a flexible interface module covering several serial communication protocols. The user can configure this controller as UART, SPI, or I<sup>2</sup>C functional protocol.

### 6.17.2 Features

The controller can be individually configured to match the application needs. The following protocols are supported:

- UART
- SPI
- I<sup>2</sup>C

## 6.18 USCI – UART Mode

### 6.18.1 Overview

The asynchronous serial channel UART covers the reception and the transmission of asynchronous data frames. It performs a serial-to-parallel conversion on data received from the peripheral, and a parallel-to-serial conversion on data transmitted from the controller. The receiver and transmitter being independent, frames can start at different points in time for transmission and reception.

The UART controller also provides auto flow control. There are two conditions to wake-up the system.

### 6.18.2 Features

- Supports one transmit buffer and two receive buffer for data payload
- Supports hardware auto flow control function
- Supports programmable baud-rate generator
- Support 9-bit Data Transfer (Support 9-bit RS-485)
- Baud rate detection possible by built-in capture event of baud rate generator
- Supports PDMA capability
- Supports Wake-up function (Data and nCTS Wakeup Only)

## 6.19 USCI - SPI Mode

### 6.19.1 Overview

The SPI protocol of USCI controller applies to synchronous serial data communication and allows full duplex transfer. It supports both master and Slave operation mode with the 4-wire bi-direction interface. SPI mode of USCI controller performs a serial-to-parallel conversion on data received from a peripheral device, and a parallel-to-serial conversion on data transmitted to a peripheral device. The SPI mode is selected by FUNMODE (USPI\_CTL[2:0]) = 0x1

This SPI protocol can operate as Master or Slave mode by setting the SLAVE (USPI\_PROTCTL[0]) to communicate with the off-chip SPI Slave or master device. The application block diagrams in Master and Slave mode are shown below.

Figure 6.19-1 SPI Master Mode Application Block Diagram

Figure 6.19-2 SPI Slave Mode Application Block Diagram

### 6.19.2 Features

- Supports Master or Slave mode operation (the maximum frequency -- Master =  $f_{PCLK} / 2$ , Slave <  $f_{PCLK} / 5$ )
- Configurable bit length of a transfer word from 4 to 16-bit
- Supports one transmit buffer and two receive buffers for data payload
- Supports MSB first or LSB first transfer sequence

- Supports Word Suspend function
- Supports PDMA transfer
- Supports 3-wire, no slave select signal, bi-direction interface
- Supports wake-up function by slave select signal in Slave mode
- Supports one data channel half-duplex transfer

## 6.20 USCI - I<sup>2</sup>C Mode

### 6.20.1 Overview

On I<sup>2</sup>C bus, data is transferred between a Master and a Slave. Data bits transfer on the SCL and SDA lines are synchronously on a byte-by-byte basis. Each data byte is 8-bit. There is one SCL clock pulse for each data bit with the MSB being transmitted first, and an acknowledge bit follows each transferred byte. Each bit is sampled during the high period of SCL; therefore, the SDA line may be changed only during the low period of SCL and must be held stable during the high period of SCL. A transition on the SDA line while SCL is high is interpreted as a command (START or STOP). Please refer to Figure 6.20-1 for more detailed I<sup>2</sup>C BUS Timing.

Figure 6.20-1 I<sup>2</sup>C Bus Timing

The device's on-chip I<sup>2</sup>C provides the serial interface that meets the I<sup>2</sup>C bus standard mode specification. The I<sup>2</sup>C port handles byte transfers autonomously. The I<sup>2</sup>C mode is selected by FUNMODE (UI2C\_CTL [2:0]) = 100B. When enable this port, the USCI interfaces to the I<sup>2</sup>C bus via two pins: SDA and SCL. When I/O pins are used as I<sup>2</sup>C ports, user must set the pins function to I<sup>2</sup>C in advance.

**Note:** Pull-up resistor is needed for I<sup>2</sup>C operation because the SDA and SCL are set to open-drain pins when USCI is selected to I<sup>2</sup>C operation mode .

### 6.20.2 Features

- Full master and slave device capability
- Supports of 7-bit addressing, as well as 10-bit addressing
- Communication in standard mode (100 kBit/s) or in fast mode (up to 400 kBit/s)
- Supports multi-master bus
- Supports one transmit buffer and two receive buffer for data payload
- Supports 10-bit bus time-out capability
- Supports bus monitor mode.
- Supports Power down wake-up by received 'START' symbol or address match
- Supports setup/hold time programmable
- Supports multiple address recognition (two slave address with mask option)

## 6.21 External Bus Interface (EBI)

### 6.21.1 Overview

This chip is equipped with an external bus interface (EBI) for external device use. To save the connections between an external device and a chip, EBI is operating at address bus and data bus multiplex mode. The EBI supports two chip selects that can connect two external devices with different timing setting requirements.

### 6.21.2 Features

- Supports up to two memory banks
- Supports dedicated external chip select pin with polarity control for each bank
- Supports accessible space up to 1 Mbytes for each bank, actually external addressable space is dependent on package pin out
- Supports 8-/16-bit data width
- Supports byte write in 16-bit data width mode
- Supports Address/Data multiplexed Mode
- Supports Timing parameters individual adjustment for each memory block
- Supports LCD interface i80 mode
- Supports PDMA mode
- Supports variable external bus base clock (MCLK) which based on HCLK
- Supports configurable idle cycle for different access condition: Idle of Write command finish (W2X) and Idle of Read-to-Read (R2R)
- Supports address bus and data bus separate mode

## 6.22 USB 2.0 Full-Speed Device Controller (USBD)

### 6.22.1 Overview

There is one set of USB 2.0 full-speed device controller and transceiver in this device. It is compliant with USB 2.0 full-speed device specification and supports control/bulk/interrupt/ isochronous transfer types.

In this device controller, there are two main interfaces: the APB bus and USB bus which comes from the USB PHY transceiver. For the APB bus, the CPU can program control registers through it. There are 512 Bytes internal SRAM as data buffer in this controller. For IN or OUT transfer, it is necessary to write data to SRAM or read data from SRAM through the APB interface or SIE. User needs to set the effective starting address of SRAM for each endpoint buffer through buffer segmentation register (USBD\_BUFSEGx).

There are 8 endpoints in this controller. Each of the endpoint can be configured as IN or OUT endpoint. All the operations including Control, Bulk, Interrupt and Isochronous transfer are implemented in this block. The block of "Endpoint Control" is also used to manage the data sequential synchronization, endpoint states, current start address, transaction status, and data buffer status for each endpoint.

There are four different interrupt events in this controller. They are the no-event-wake-up, device plug-in or plug-out event, USB events, like IN ACK, OUT ACK etc, and BUS events, like suspend and resume, etc. Any event will cause an interrupt, and users just need to check the related event flags in interrupt event status register (USBD\_INTSTS) to acknowledge what kind of interrupt occurring, and then check the related USB Endpoint Status Register USBD\_EPSTS0 to acknowledge what kind of event occurring in this endpoint.

A software-disconnect function is also supported for this USB controller. It is used to simulate the disconnection of this device from the host. If user enables SE0 bit (USBD\_SE0), the USB controller will force the output of USB\_D+ and USB\_D- to level low and its function is disabled. After disable the SE0 bit, host will enumerate the USB device again.

For more information on the Universal Serial Bus, please refer to Universal Serial Bus Specification Revision 2.0.

### 6.22.2 Features

- Compliant with USB 2.0 Full-Speed specification
- Provides 1 interrupt vector with 5 different interrupt events (SOF, NEVWK, VBUSDET, USB and BUS)
- Supports Control/Bulk/Interrupt/Isochronous transfer type
- Supports suspend function when no bus activity existing for 3 ms
- Supports 8 endpoints for configurable Control/Bulk/Interrupt/Isochronous transfer types and maximum 512 byte buffer size
- Provides remote wake-up capability

## 6.23 CRC Controller (CRC)

### 6.23.1 Overview

The Cyclic Redundancy Check (CRC) generator can perform CRC calculation with four common polynomials CRC-CCITT, CRC-8, CRC-16, and CRC-32 settings.

### 6.23.2 Features

- Supports four common polynomials CRC-CCITT, CRC-8, CRC-16, and CRC-32
  - CRC-CCITT:  $X^{16} + X^{12} + X^5 + 1$
  - CRC-8:  $X^8 + X^2 + X + 1$
  - CRC-16:  $X^{16} + X^{15} + X^2 + 1$
  - CRC-32:  $X^{32} + X^{26} + X^{23} + X^{22} + X^{16} + X^{12} + X^{11} + X^{10} + X^8 + X^7 + X^5 + X^4 + X^2 + X + 1$
- Programmable seed value
- Supports programmable order reverse setting for input data and CRC checksum
- Supports programmable 1's complement setting for input data and CRC checksum
- Supports 8/16/32-bit of data width
  - 8-bit write mode: 1-AHB clock cycle operation
  - 16-bit write mode: 2-AHB clock cycle operation
  - 32-bit write mode: 4-AHB clock cycle operation
- Supports using PDMA to write data to perform CRC operation

## 6.24 Hardware Divider (HDIV)

### 6.24.1 Overview

The hardware divider (HDIV) is useful to the high performance application. The hardware divider is a signed, integer divider with both quotient and remainder outputs.

### 6.24.2 Features

- Signed (two's complement) integer calculation
- 32-bit dividend with 16-bit divisor calculation capacity
- 32-bit quotient and 32-bit remainder outputs (16-bit remainder with sign extends to 32-bit)
- Divided by zero warning flag
- Write divisor to trigger calculation

## 6.25 Analog-to-Digital Converter (ADC)

### 6.25.1 Overview

The ADC contains one 12-bit successive approximation analog-to-digital converter (SAR A/D converter) with 16 input channels. The A/D converter supports four operation modes: Single, Burst, Single-cycle Scan and Continuous Scan mode. The A/D converter can be started by software, external pin (STADC), timer0~3 overflow pulse trigger, PWM trigger or BPWM trigger.

### 6.25.2 Features

- Operating voltage: 1.8V~3.6V.
- Analog input voltage: 0 ~  $AV_{DD}$ .
- Supports external reference voltage from  $V_{REF}$  pin.
- 12-bit resolution and 10-bit accuracy is guaranteed.
- Up to 16 single-end analog input channels or 8 differential analog input channels.
- Maximum ADC peripheral clock frequency is 34 MHz.
- Up to 2 MSPS sampling rate.
- Scan on enabled channels
- Threshold voltage detection
- Four operation modes:
  - Single mode: A/D conversion is performed one time on a specified channel.
  - Burst mode: A/D converter samples and converts the specified single channel and sequentially stores the result in FIFO.
  - Single-cycle Scan mode: A/D conversion is performed only one cycle on all specified channels with the sequence from the smallest numbered channel to the largest numbered channel.
  - Continuous Scan mode: A/D converter continuously performs Single-cycle Scan mode until software stops A/D conversion.
- An A/D conversion can be started by:
  - Software Write 1 to ADST bit
  - External pin (STADC)
  - Timer 0~3 overflow pulse trigger
  - BPWM trigger
  - PWM trigger
- Each conversion result is held in data register of each channel with valid and overrun indicators.
- Conversion result can be compared with specified value and user can select whether to generate an interrupt when conversion result matches the compare register setting.
- Supports extend sample time function (0~255 ADC clock).
- One internal channel from band-gap voltage ( $V_{BG}$ ).
- One internal channel from internal pull-up/down circuit.
- Supports PDMA transfer mode.

- Supports Calibration mode.
- Supports Floating Detect Function

**Note1:** ADC sampling rate = (ADC peripheral clock frequency) / (total ADC conversion cycle)

**Note2:** If the internal channel for band-gap voltage is active, the maximum sampling rate will be 300k SPS.

**Note3:** The ADC Clock frequency must be slower than or equal to PCLK.

Table 6.25-1 ADC Features Comparison Table

6.26 Analog Comparator Controller (ACMP)

6.26.1 Overview

The chip provides two comparators. The comparator output is logic 1 when positive input is greater than negative input; otherwise, the output is 0. Each comparator can be configured to generate an interrupt when the comparator output value changes.

6.26.2 Features

- Analog input voltage range: 0 ~ AV<sub>DD</sub> (voltage of AV<sub>DD</sub> pin)
- Supports hysteresis function
- Supports wake-up function
- Selectable input sources of positive input and negative input
- ACMP0 supports:
  - 4 multiplexed I/O pins at positive sources:
    - ◆ ACMP0\_P0, ACMP0\_P1, ACMP0\_P2, or ACMP0\_P3
  - 3 negative sources:
    - ◆ ACMP0\_N
    - ◆ Comparator Reference Voltage (CRV)
    - ◆ Internal band-gap voltage (VBG)
- ACMP1 supports
  - 4 multiplexed I/O pins at positive sources:
    - ◆ ACMP1\_P0, ACMP1\_P1, ACMP1\_P2, or ACMP1\_P3
  - 3 negative sources:
    - ◆ ACMP1\_N
    - ◆ Comparator Reference Voltage (CRV)
    - ◆ Internal band-gap voltage (VBG)
- Shares one ACMP interrupt vector for all comparators
- Interrupts generated when compare results change (Interrupt event condition is programmable)
- Supports triggers for break events and cycle-by-cycle control for PWM
- Supports window compare mode and window latch mode
- Supports calibration function

## 6.27 Peripherals Interconnection

### 6.27.1 Overview

Some peripherals have interconnections which allow autonomous communication or synchronous action between peripherals without needing to involve the CPU. Peripherals interact without CPU saves CPU resources, reduces power consumption, operates with no software latency and fast responds.

### 6.27.2 Peripherals Interconnect Matrix table

| Source     | Destination       |                   |                   |                   |                   |                   |

## 7 APPLICATION CIRCUIT

### 7.1 Power Supply Scheme

## 7.2 Peripheral Application Scheme

## 8 ELECTRICAL CHARACTERISTICS

### 8.1 Absolute Maximum Ratings

Stresses above the absolute maximum ratings may cause permanent damage to the device. The limiting values are stress ratings only and cannot be used to functional operation of the device. Exposure to the absolute maximum ratings may affect device reliability and proper operation is not guaranteed.

#### 8.1.1 Voltage Characteristics

| Symbol                          | Description                                           | Min          | Max | Unit |
|---------------------------------|-------------------------------------------------------|--------------|-----|------|
| $V_{DD}-V_{SS}$ <sup>[*1]</sup> | DC power supply                                       | -0.3         | 4.0 | V    |
| $\Delta V_{DD}$                 | Variations between different power pins               | -            | 50  | mV   |
| $ V_{DD}-AV_{DD} $              | Allowed voltage difference for $V_{DD}$ and $AV_{DD}$ | -            | 50  | mV   |
| $\Delta V_{SS}$                 | Variations between different ground pins              | -            | 50  | mV   |
| $ V_{SS}-AV_{SS} $              | Allowed voltage difference for $V_{SS}$ and $AV_{SS}$ | -            | 50  | mV   |
| $V_{IN}$                        | Input voltage on 5V-tolerance I/O                     | $V_{SS}-0.3$ | 5.5 | V    |
|                                 | Input voltage on any other pin <sup>[*2]</sup>        | $V_{SS}-0.3$ | 4.0 | V    |

**Note:**

1. All main power ( $V_{DD}$ ,  $AV_{DD}$ ) and ground ( $V_{SS}$ ,  $AV_{SS}$ ) pins must be connected to the external power supply.
2. Non 5V-tolerance I/O includes PA.10 ~ 11; PB.0 ~ 15; PF.2, 3, 4, 5; all USB pin and nRESET pin.  $V_{IN}$  maximum value must be respected to avoid permanent damage. Refer to Table 8.1-2 for the values of the maximum allowed injected current

Table 8.1-1 Voltage Characteristics

#### 8.1.2 Current Characteristics

| Symbol                                | Description                                               | Min | Max | Unit |
|---------------------------------------|-----------------------------------------------------------|-----|-----|------|
| $\Sigma I_{DD}$ <sup>[*1]</sup>       | Maximum current into $V_{DD}$                             | -   | 150 | mA   |
| $\Sigma I_{SS}$                       | Maximum current out of $V_{SS}$                           | -   | 100 |      |
| $I_{IO}$                              | Maximum current sunk by a I/O Pin                         | -   | 20  |      |
|                                       | Maximum current sourced by a I/O Pin                      | -   | 20  |      |
|                                       | Maximum current sunk by total I/O Pins <sup>[*2]</sup>    | -   | 100 |      |
|                                       | Maximum current sourced by total I/O Pins <sup>[*2]</sup> | -   | 100 |      |
| $I_{INJ(PIN)}$ <sup>[*3]</sup>        | Maximum injected current by a I/O Pin                     | -   | ±5  |      |
| $\Sigma I_{INJ(PIN)}$ <sup>[*3]</sup> | Maximum injected current by total I/O Pins                | -   | ±25 |      |

**Note:**

1. Maximum allowable current is a function of device maximum power dissipation.
2. This current consumption must be correctly distributed over all I/Os and control pins. The total output current must not be sunk/sourced between two consecutive power supply pins.
3. A positive injection is caused by  $V_{IN} > V_{DD}$  and a negative injection is caused by  $V_{IN} < V_{SS}$ .  $I_{INJ(PIN)}$  must never be exceeded. It is recommended to connect an overvoltage protection diode between the analog input pin and the voltage supply pin.

Table 8.1-2 Current Characteristics

### 8.1.3 Thermal Characteristics

The average junction temperature can be calculated by using the following equation:

$$T_J = T_A + (P_D \times \theta_{JA})$$

- $T_A$  = ambient temperature (°C)
- $\theta_{JA}$  = thermal resistance junction-ambient (°C/Watt)
- $P_D$  = sum of internal and I/O power dissipation

| Symbol                                                                                                             | Description                                                     | Min | Typ  | Max | Unit    |
|--------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|-----|------|-----|---------|
| $T_A$                                                                                                              | Operating ambient temperature                                   | -40 | -    | 105 | °C      |
| $T_J$                                                                                                              | Operating junction temperature                                  | -40 | -    | 125 |         |
| $T_{ST}$                                                                                                           | Storage temperature                                             | -65 | -    | 150 |         |

Table 8.1-3 Thermal Characteristics

### 8.1.4 EMC Characteristics

#### 8.1.4.1 Electrostatic discharge (ESD)

For the Nuvoton MCU products, there are ESD protection circuits which built into chips to avoid any damage that can be caused by typical levels of ESD.

#### 8.1.4.2 Static latchup

Two complementary static tests are required on six parts to assess the latchup performance:

- A supply overvoltage is applied to each power supply pin
- A current injection is applied to each input, output and configurable I/O pin

#### 8.1.4.3 Electrical fast transients (EFT)

In some application circuit compoment will produce fast and narrow high-frequency trasnients bursts of narrow high-frequency transients on the power distribution system..

- Inductive loads:
  - Relays, switch contactors
  - Heavy-duty motors when de-energized etc.

The fast transient immunity requirements for electronic products are defined in IEC 61000-4-4 by International ElectrotechnicalCommission (IEC).

| Symbol                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Description                                 | Min   | Typ | Max   | Unit |

### 8.1.5 Package Moisture Sensitivity(MSL)

The MSL rating of an IC determines its floor life before the board mounting once its dry bag has been opened. All Nuvoton surface mount chips have a moisture level classification. The information is also displayed on the bag packing.

| Packagge                                                                                                      | MSL   |
|---------------------------------------------------------------------------------------------------------------|-------|
| 20-pin TSSOP(4.4x6.5 mm) <sup>[*1]</sup>                                                                      | MSL 3 |
| 28-pin TSSOP(4.4x9.7 mm) <sup>[*1]</sup>                                                                      | MSL 3 |
| 33-pin QFN(4x4 mm) <sup>[*1]</sup>                                                                            | MSL 3 |

Note:

1.It is recommended to power V<sub>DD</sub> and AV<sub>DD</sub> from the same source. A maximum difference of 0.3 V between V<sub>DD</sub> and AV<sub>DD</sub> can be tolerated during power-on and power-off operation .

2.To ensure stability, an external 1 μF output capacitor, C<sub>LDO</sub> must be connected between the LDO\_CAP pin and the closest GND pin of the device. Solid tantalum and multilayer ceramic capacitors are suitable as output capacitor. Additional 100 nF bypass capacitor between LDO\_CAP pin and the closest GND pin of the device helps decrease output noise and improves the load transient response.

3.Guaranteed by design, not tested in production

4.Based on characterization, not tested in production unless otherwise specified.

Table 8.2-1 General Operating Conditions

## 8.3 DC Electrical Characteristics

### 8.3.1 Supply Current Characteristics for [M03xB/M03xC/M03xD/M03xE](#)

The current consumption is a combination of internal and external parameters and factors such as operating frequencies, device software configuration, I/O pin loading, I/O pin switching rate, program location in memory and so on. The current consumption is measured as described in below condition and table to inform test characterization result.

- All GPIO pins are in push pull mode and output high.
- The maximum values are obtained for  $V_{DD} = 3.6$  V and maximum ambient temperature ( $T_A$ ), and the typical values for  $T_A = 25$  °C and  $V_{DD} = 1.8$  V ~ 3.6 V unless otherwise specified.
- $V_{DD} = AV_{DD}$
- When the peripherals are enabled HCLK is the system clock,  $f_{PCLK0,1} = f_{HCLK}$ .
- Program run CoreMark® code in Flash.

Note:

1.

Crystal used: AURUM XF66RU000032C0 with a CL of 20 pF for typical values

2.

V<sub>DD</sub> = AV<sub>DD</sub> = 3.3V, LVR17 enabled, POR disabled and BOD disabled.

3.

Based on characterization, not tested in production unless otherwise specified.

4.

When analog peripheral blocks such as ADC and ACMP are ON, an additional power consumption should be considered.

5.

Based on characterization, tested in production.

Table 8.3-3 Chip Current Consumption in Power-down Mode

### 8.3.2 Supply Current Characteristics for M03xG/M03xI

The current consumption is a combination of internal and external parameters and factors such as operating frequencies, device software configuration, I/O pin loading, I/O pin switching rate, program location in memory and so on. The current consumption is measured as described in below condition and table to inform test characterization result.

- All GPIO pins are in push pull mode and output high.
- The maximum values are obtained for  $V_{DD} = 3.6\text{ V}$  and maximum ambient temperature ( $T_A$ ), and the typical values for  $T_A = 25\text{ }^{\circ}\text{C}$  and  $V_{DD} = 1.8\text{ V} \sim 3.6\text{ V}$  unless otherwise specified.
- $V_{DD} = AV_{DD}$
- When the peripherals are enabled HCLK is the system clock,  $f_{PCLK0,1} = f_{HCLK}$ .
- Program run CoreMark<sup>®</sup> code in Flash.

**Note:**

1. Crystal used: AURUM XF66RU000032C0 with a CL of 20 pF for typical values
2. V<sub>DD</sub> = AV<sub>DD</sub> = 3.3V, LVR17 enabled, POR disabled and BOD disabled.
3. Based on characterization, not tested in production unless otherwise specified.
4. When analog peripheral blocks such as ADC and ACMP are ON, an additional power consumption should be considered.
5. Based on characterization, tested in production.

Table 8.3-6 Chip Current Consumption in Power-down Mode

### 8.3.3 On-Chip Peripheral Current Consumption

- The typical values for  $T_A = 25\text{ }^{\circ}\text{C}$  and  $V_{DD} = AV_{DD} = 3.3\text{ V}$  unless otherwise specified.
- All GPIO pins are set as output high of push pull mode without multi-function.
- HCLK is the system clock,  $f_{HCLK} = 48\text{ MHz}$ ,  $f_{PCLK0,1} = f_{HCLK}$ .
- The result value is calculated by measuring the difference of current consumption between all peripherals clocked off and only one peripheral clocked on

| Peripheral             | $I_{DD}^{[*1]}$ | Unit |
|------------------------|-----------------|------|
| PDMA                   | 0.721           | mA   |

Table 8.3-7 Peripheral Current Consumption

### 8.3.4 Wakeup Time from Low-Power Modes

The wakeup times given in Table 8.2-1 is measured on a wakeup phase with a 48 MHz HIRC oscillator.

| Symbol                                                                                                                                                                                                   | Parameter                          | Typ | Max | Unit    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|-----|-----|---------|
| $t_{WU\_IDLE}$                                                                                                                                                                                           | Wakeup from IDLE mode              | 5   | 6   | cycles  |
| $t_{WU\_NPD}^{[*1][*2]}$                                                                                                                                                                                 | Wakeup from normal power down mode | 12  | 25  | $\mu s$ |
| <b>Note:</b><br>1. Based on test during characterization, not tested in production.<br>2. The wakeup times are measured from the wakeup event to the point in which the application code reads the first |                                    |     |     |         |

Table 8.3-8 Low-power Mode Wakeup Timings

### 8.3.5 I/O Current Injection Characteristics

In general, I/O current injection due to external voltages below  $V_{SS}$  or above  $V_{DD}$  except 5V-tolerance I/O should be avoided during normal product operation. However, the analog component of the MCU is most likely to be affected by the injection current, but it is not easily clarified when abnormal injection accidentally happens. It is recommended to add a Schottky diode (pin to ground or pin to  $V_{DD}$ ) to pins that include analog function which may potentially injection currents.

| Symbol         | Parameter                     | Negative injection | Positive injection | Unit | Test Condition                                                                 |
|----------------|-------------------------------|--------------------|--------------------|------|--------------------------------------------------------------------------------|
| $I_{INJ(PIN)}$ | Injected current by a I/O Pin | -0                 | 0                  | mA   | Injected current on nReset pins                                                |
|                |                               | -0                 | 0                  |      | Injected current on PF2~PF5, PA10, PA11 and PB0~PB15 for analog input function |
|                |                               | -5                 | NA                 |      | Injected current on any other 5V-tolerance I/O                                 |

Table 8.4-2 38.4 kHz Internal Low Speed RC Oscillator(LIRC) characteristics

### 8.4.3 External 4~32 MHz High Speed Crystal/Ceramic Resonator (HXT) characteristics

The high-speed external (HXT) clock can be supplied with a 4 to 32 MHz crystal/ceramic resonator oscillator. All the information given in this section are based on characterization results obtained with typical external components. In the application, the external components have to be placed as close as possible to the XT1\_IN and XT1\_Out pins and must not be connected to any other devices in order to minimize output distortion and startup stabilization time. Refer to the crystal resonator manufacturer for more details on the resonator characteristics (frequency, package, accuracy).

Table 8.4-4 External 4~32 MHz High Speed Crystal Characteristics

8.4.3.1 Typical Crystal Application Circuits

For C1 and C2, it is recommended to use high-quality external ceramic capacitors in 10 pF ~ 25 pF range, designed for high-frequency applications, and selected to match the requirements of the crystal or resonator. The crystal manufacturer typically specifies a load capacitance which is the series combination of C1 and C2. PCB and MCU pin capacitance must be included (8 pF can be used as a rough estimate of the combined pin and board capacitance) when sizing C1 and C2.

| CRYSTAL        | C1         | C2         | R1      |
|----------------|------------|------------|---------|
| 4 MHz ~ 32 MHz | 10 ~ 25 pF | 10 ~ 25 pF | without |

Table 8.4-5 External 4~32 MHz High Speed Clock Input Signal

8.4.5 External 32.768 kHz Low Speed Crystal/Ceramic Resonator (LXT) characteristics

The low-speed external (LXT) clock can be supplied with a 32.768 kHz crystal/ceramic resonator oscillator. All the information given in this section are based on characterization results obtained with typical external components. In the application, the external components have to be placed as close as possible to the X32\_OUT and X32\_IN pins and must not be connected to any other devices in order to minimize output distortion and startup stabilization time. Refer to the crystal resonator manufacturer for more details on the resonator characteristics (frequency, package, accuracy).

### 8.4.6 External 32.768 kHz Low Speed Clock Input Signal Characteristics

For clock input mode the LXT oscillator is switched off and X32\_IN is a standard input pin to receive external clock. The external clock signal has to respect the below Table. The characteristics result from tests performed using a waveform generator.

| Symbol         | Parameter                        | Min <sup>[1]</sup> | Typ    | Max <sup>[1]</sup> | Unit | Test Conditions                         |
|----------------|----------------------------------|--------------------|--------|--------------------|------|-----------------------------------------|
| $f_{LSE\_ext}$ | External clock source frequency  | -                  | 32.768 | -                  | kHz  |                                         |
| $t_{CHCX}$     | Clock high time                  | 450                | -      | -                  | ns   |                                         |
| $t_{CLCX}$     | Clock low time                   | 450                | -      | -                  | ns   |                                         |

Note:

1.

Guaranteed by characterization result, not tested in production.

2.

$C_L$  is a external capacitive load to simulate PCB and device loading.

3.

The maximum frequency is defined by  $f_{max} = \frac{2}{3 \times (t_f + t_r)}$ .

4.

The I/O dynamic current consumption is defined by  $I_{DIO} = V_{DD} \times f_{IO} \times (C_{IO} + C_L)$

Table 8.4-10 I/O AC Characteristics

## 8.5 Analog Characteristics

### 8.5.1 LDO

| Symbol           | Parameter      | Min | Typ | Max | Unit | Test Condition |
|------------------|----------------|-----|-----|-----|------|----------------|
| V <sub>DD</sub>  | Power supply   | 1.8 | -   | 3.6 | V    |                |
| V <sub>LDO</sub> | Output voltage | -   | 1.8 | -   | V    |                |
| T <sub>A</sub>   | Temperature    | -40 | -   | 105 | °C   |                |

#### Note

1. It is recommended a 0.1μF bypass capacitor is connected between V<sub>DD</sub> and the closest V<sub>SS</sub> pin of the device.
2. For ensuring power stability, a 1μF capacitor must be connected between LDO\_CAP pin and the closest V<sub>SS</sub> pin of the device.

### 8.5.2 Reset and Power Control Block Characteristics

The parameters in below table are derived from tests performed under ambient temperature.

| Symbol                              | Parameter                      | Min  | Typ  | Max  | Unit | Test Conditions         |
|-------------------------------------|--------------------------------|------|------|------|------|-------------------------|
| I <sub>POR</sub> <sup>[*1]</sup>    | POR operating current          | -    | 20   | 30   | μA   | AV <sub>DD</sub> = 3.6V |
| I <sub>LVR</sub> <sup>[*1]</sup>    | LVR operating current          | -    | 2    | 3.6  |      | AV <sub>DD</sub> = 3.6V |
| I <sub>BOD</sub> <sup>[*1]</sup>    | BOD operating current          | -    | 3    | 5.5  |      | AV <sub>DD</sub> = 3.6V |
| V <sub>POR</sub>                    | POR reset voltage              | 1.35 | 1.5  | 1.65 | V    | -                       |

| $R_{EX}$ <sup>[*1]</sup> | External input impedance             | -   | -   | 50  | k $\Omega$ |                                                                                                                 |

**Note:**

1. Guaranteed by characterization result, not tested in production.
2.  $R_{EX}$  max formula is used to determine the maximum external impedance allowed for 1/4 LSB error.  $N = 12$  (based on 12-bit resolution) and  $k$  is the number of sampling clocks ( $T_{SMP}$ ).  $C_{EX}$  represents the capacitance of PCB and pad and is combined with  $R_{EX}$  into a low-pass filter. Once the  $R_{EX}$  and  $C_{EX}$  values are too large, it is possible to filter the real signal and reduce the ADC accuracy.

$$R_{EX} = \frac{k}{f_{ADC} \times C_{IN} \times \ln(2^{N+2})} - R_{IN}$$

**Note:** Injection current is an important topic of ADC accuracy. Injecting current on any analog input pins should be avoided to protect the conversion being performed on another analog input. It is recommended to add Schottky diodes (pin to ground and pin to power) to analog pins which may potentially inject currents.

**Note:** The INL is the peak difference between the transition point of the steps of the calibrated transfer curve and the ideal transfer curve. A calibrated transfer curve means it has calibrated the offset and gain error from the actual transfer curve.

### 8.5.4 Analog Comparator Controller (ACMP)

The maximum values are obtained for  $V_{DD} = 3.6$  V and maximum ambient temperature ( $T_A$ ), and the typical values for  $T_A = 25$  °C and  $V_{DD} = 3.3$  V unless otherwise specified.

| t <sub>r</sub>       | SCL/SDA rise time                   | -                               | 1000                | 20+0.1C <sub>b</sub>        | 300                | ns   |
| t <sub>f</sub>       | SCL/SDA fall time                   | -                               | 300                 | -                           | 300                | ns   |
| C <sub>b</sub>       | Capacitive load for each bus line   | -                               | 400                 | -                           | 400                | pF   |

**Note:**

1. Guaranteed by characteristic, not tested in production
2. HCLK must be higher than 2 MHz to achieve the maximum standard mode I2C frequency. It must be higher than 8 MHz to achieve the maximum fast mode I2C frequency.
3. I2C controller must be retriggered immediately at slave mode after receiving STOP condition.
4. The device must internally provide a hold time of at least 300 ns for the SDA signal in order to bridge the undefined region of the falling edge of SCL.
5. The maximum hold time of the Start condition has only to be met if the interface does not stretch the low period of SCL signal.

**Note:**

1. Guaranteed by characteristic, not tested in production
2. HCLK must be higher than 2 MHz to achieve the maximum standard mode I2C frequency. It must be higher than 8 MHz to achieve the maximum fast mode I2C frequency.
3. I2C controller must be retriggered immediately at slave mode after receiving STOP condition.
4. The device must internally provide a hold time of at least 300 ns for the SDA signal in order to bridge the undefined region of the falling edge of SCL.
5. The maximum hold time of the Start condition has only to be met if the interface does not stretch the low period of SCL signal.

## 10 ABBREVIATIONS

### 10.1 Abbreviations

| Acronym | Description                                     |
|---------|-------------------------------------------------|
| ACMP    | Analog Comparator Controller                    |
| ADC     | Analog-to-Digital Converter                     |
| AES     | Advanced Encryption Standard                    |
| APB     | Advanced Peripheral Bus                         |
| AHB     | Advanced High-Performance Bus                   |
| BOD     | Brown-out Detection                             |
| CAN     | Controller Area Network                         |
| DAP     | Debug Access Port                               |
| DES     | Data Encryption Standard                        |
| EADC    | Enhanced Analog-to-Digital Converter            |
| EBI     | External Bus Interface                          |
| EMAC    | Ethernet MAC Controller                         |
| EPWM    | Enhanced Pulse Width Modulation                 |
| FIFO    | First In, First Out                             |
| FMC     | Flash Memory Controller                         |
| FPU     | Floating-point Unit                             |
| GPIO    | General-Purpose Input/Output                    |
| HCLK    | The Clock of Advanced High-Performance Bus      |
| HIRC    | 12 MHz Internal High Speed RC Oscillator        |
| HXT     | 4~32 MHz External High Speed Crystal Oscillator |
| IAP     | In Application Programming                      |
| ICP     | In Circuit Programming                          |
| ISP     | In System Programming                           |
| LDO     | Low Dropout Regulator                           |
| LIN     | Local Interconnect Network                      |
| LIRC    | 10 kHz internal low speed RC oscillator (LIRC)  |
| MPU     | Memory Protection Unit                          |
| NVIC    | Nested Vectored Interrupt Controller            |
| PCLK    | The Clock of Advanced Peripheral Bus            |
| PDMA    | Peripheral Direct Memory Access                 |
| PLL     | Phase-Locked Loop                               |
| PWM     | Pulse Width Modulation                          |

|      |                                             |
|------|---------------------------------------------|
| QEI  | Quadrature Encoder Interface                |
| SD   | Secure Digital                              |
| SPI  | Serial Peripheral Interface                 |
| SPS  | Samples per Second                          |
| TDES | Triple Data Encryption Standard             |
| TK   | Touch Key                                   |
| TMR  | Timer Controller                            |
| UART | Universal Asynchronous Receiver/Transmitter |
| UCID | Unique Customer ID                          |
| USB  | Universal Serial Bus                        |
| WDT  | Watchdog Timer                              |
| WWDT | Window Watchdog Timer                       |

## 11 REVISION HISTORY

| Date       | Revision | Description                                                                                                                                                                                                                                                         |
|------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2018.12.24 | 1.00     | Initial version.                                                                                                                                                                                                                                                    |
| 2019.02.25 | 1.01     | 1. Modified ISP ROM size in section 3.2.<br>2. Modified HIRC trim reference clock in section 6.27.2.                                                                                                                                                                |
| 2019.07.15 | 1.02     | 1. Updated TBD values in Chapter 8.<br>2. Changed test condition of data retention from $T_A$ to $T_J$ in section 8.7.<br>3. Updated Figure 6.3-6 to add a USB block and remove the temperature sensor block.<br>4. Added multi-function pin tables in section 3.2. |
| 2019.08.26 | 1.03     | 1. Updated Figure 8.4-1 HIRC vs. Temperature in section 8.4.1.<br>2. Removed Figure 8.4-2 LIRC vs. Temperature in section 8.4.2.                                                                                                                                    |
| 2019.11.04 | 2.00     | Added new part numbers for M031xI / M032xI / M031xG / M032xG / M032xC / M032xD and updated the description of the new part numbers.                                                                                                                                 |

### Important Notice

Nuvoton Products are neither intended nor warranted for usage in systems or equipment, any malfunction or failure of which may cause loss of human life, bodily injury or severe property damage. Such applications are deemed, "Insecure Usage".

Insecure usage includes, but is not limited to: equipment for surgical implementation, atomic energy control instruments, airplane or spaceship instruments, the control or operation of dynamic, brake or safety systems designed for vehicular use, traffic signal instruments, all types of safety devices, and other applications intended to support or sustain life.

All Insecure Usage shall be made at customer's risk, and in the event that third parties lay claims to Nuvoton as a result of customer's Insecure Usage, customer shall indemnify the damages and liabilities thus incurred by Nuvoton.
