LINEAR INTEGRATED CIRCUIT

REAR WINDOW HEATING TIMER

DESCRIPTION

The bipolar integrated circuit UTC **UU6047B** is designed as a window heating timer. Due to time controlled functions, they reduce the current consumptions of high loads i.e., heating resistors.

An ON-relay can be switched off after a preset delay time. The relay time can be interrupted manually, whereas a retrigger function is not provided.

FEATURES

- * Delay time range: 3.7s to 20h
- * Relay driver with Z-diode
- * RC oscillator determines switching characteristics
- * Debounced input for toggle switch
- * Two debounced inputs: ON and OFF
- * Load-dump protection
- * RF interference protected
- * Inputs switched to ground
