

# 050-319

## PRODUCT BRIEF

100 MBPS-4.25 GBPS

PC BOARD MOUNT DUAL-TRANSMITTER FOR SINGLE MODE FIBER

(2) 1310NM FABRY-PEROT (FP) TRANSMITTERS

SMALL & COMPACT WITH RUGGED CONSTRUCTION FOR  
HARSH ENVIRONMENTS

REV	DESCRIPTION	DATE	APPROVED

THIS COPYRIGHTED DOCUMENT IS THE PROPERTY OF GLENAIR, INC. AND IS FURNISHED ON THE CONDITION THAT IT IS NOT TO BE DISCLOSED, REPRODUCED IN WHOLE OR IN PART, OR USED TO SOLICIT QUOTATIONS FROM COMPETITIVE SOURCES, OR USED FOR MANUFACTURE BY ANYONE OTHER THAN GLENAIR, INC. WITHOUT WRITTEN PERMISSION FROM GLENAIR, INC. THE INFORMATION HEREIN HAS BEEN DEVELOPED AT GLENAIR'S EXPENSE AND MAY BE USED FOR ENGINEERING EVALUATION AND INCORPORATION INTO TECHNICAL SPECIFICATIONS AND OTHER DOCUMENTS WHICH SPECIFY PROCUREMENT OF PRODUCTS FROM GLENAIR, INC.

**050-319 Product Brief**  
**PCB Mount Dual-Transmitter for Single Mode Fiber**  
**100 Mbps – 4.25 Gbps, FP Lasers, 3.3V**

**PCB Mount Fiber Optic Dual-Transmitter, 100M- 4.25Gbps, SMF, 3.3V**

Glenair 050-319, is a ruggedized harsh environment PC Board Mount Dual-transmitter with electrical and optical functionality similar to transmitters in SFP dual-transmitters but with mechanical design that is suited to the harsh temperature and vibration environments found in Military, Aerospace, Railway, Oil and Gas, and Industrial applications. The board mount optical dual-transmitters also support optional Digital Monitoring Interface (DMI) features in accordance with SFF 8472. The dual-transmitter interfaces with a host board through a high speed electrical connector.

Each transmitter includes a Transmitter Optical Subassembly (TOSA) and laser driver circuitry. The TOSA, containing an FP (Fabry-Perot) Laser light source, is located at the optical interface and mates with the GC optical connector. The TOSA is driven by a laser driver, which converts differential logic signals into an analog laser diode drive current. This laser driver circuit regulates the optical power at a constant level provided the data pattern is DC balanced (for example 8B10B encoding).

**KEY FEATURES/BENEFITS**

- SFP Compatible Electrical Input signal levels
- 1310nm FP lasers to support up to 4.25 Gbps
- Industry standard CML input and outputs that make for simple integration on customer host PCB
- Glenair Rugged GC Optical connector for high shock and vibration applications
- Dual-transmitter is securely mounted with screws to PCB to ensure excellent shock and vibration performance
- High-Speed Electrical plug-in connector eliminates the need for soldering & enables ease of servicing
- Captive Screws to simplify assembly process
- Small: Approx. 0.8" x 0.9" x 0.5"
- -40°C to +85°C Operating Temperature Range
- Glenair fiber jumpers available to connect from dual-transmitter to any Glenair Mil/Aero Fiber Optic Connector Style
- Evaluation fixtures available
- Digital Diagnostic and Monitoring (DMI) based on SFF-8472, enables monitoring of:
  - Transmitted optical power for each channel
  - Laser bias current per laser
  - Temperature
  - Supply voltage

**APPLICATIONS**

- Harsh Environment such as: Airborne, Tactical, Railway, Industrial, Oil and Gas and Shipboard applications
  - Ethernet, Fibrechannel, 1x, 2x, 4x, SFPDP

**HOW TO ORDER**

**Table 1 Part Number Options**

Part Number	Description
050-319-1-D	100Mbps-2.5Gbps, with DMI
050-319-2-D	2.5Gbps-5Gbps, with DMI

PCB Mount Dual-Transmitter for Single Mode Fiber  
100 Mbps – 4.25 Gbps, FP Lasers, 3.3V

FIGURE 1 - OUTLINE DRAWING CONTINUED (MARKING)

LABELING:

Each unit will be shipped in an antistatic bag. The label on the antistatic bag shall be at a minimum Arial size 10 black font and contain at a minimum the following information:

ANTISTATIC BAG LABEL:

Glenair  
Cage Code (06324)  
Part Number (PN 050-xxx as required)  
Date Code (DC xxxx)  
Serial Number (SN 123456)

Each unit will be marked, either with a label or laser engraving, as follows:

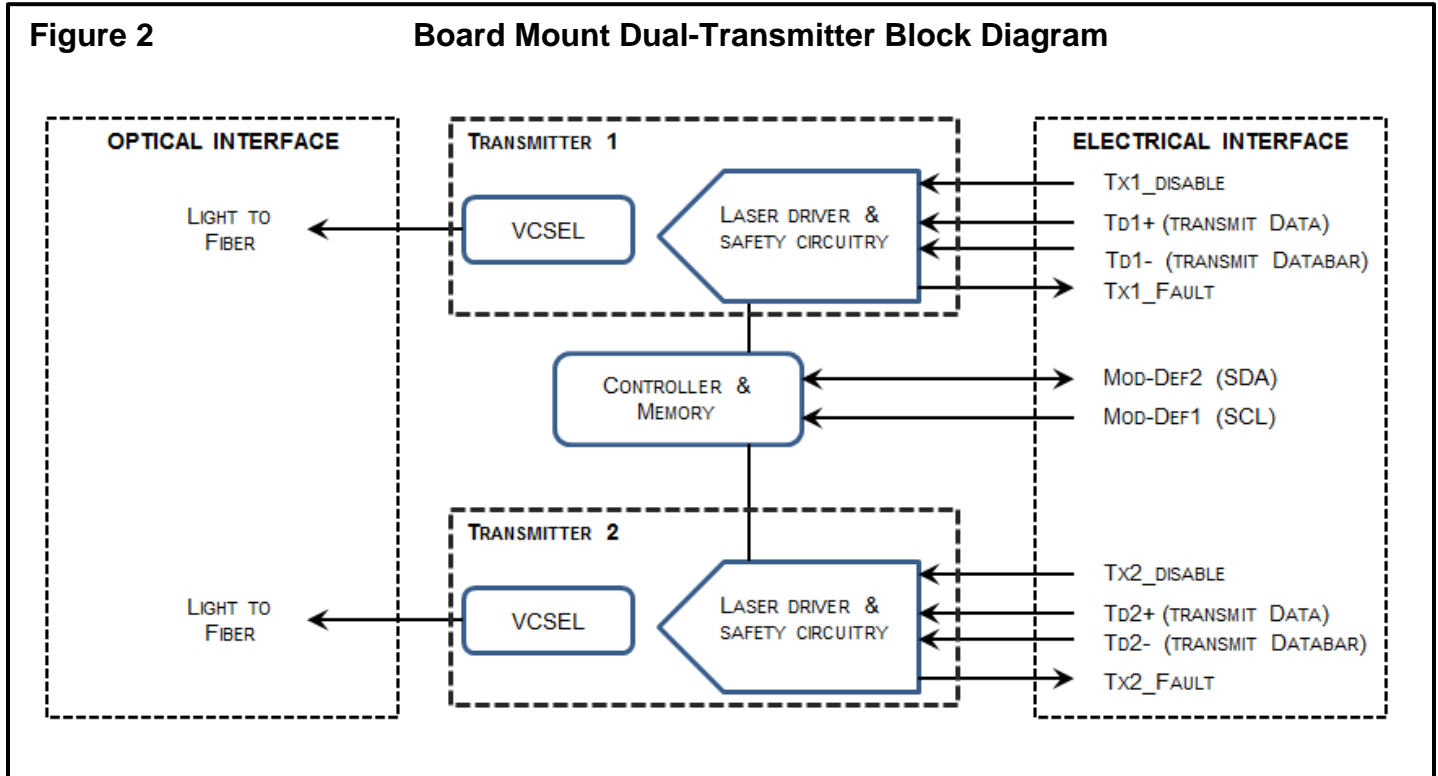

1. Marking font to be Arial, greater than .08 inches in height.
2. Minimum Marking on each part will include the following:
  - Glenair
  - Serial number
  - Glenair Part Number

Example Minimum Marking:

GLENAIR SN123456  
050-319-1-D

**FUNCTIONAL DESCRIPTION**

**TRANSMITTER SECTION**

Transmit Disable (TX1\_Disable and TX2\_Disable)

The transmitters accept a TTL and CMOS compatible transmit disable control signal input that shuts down the transmitter optical output. A high signal disables the transmitter while a low signal allows normal dual-transmitter operation. Also laser is disabled when TX Disable is open. In the event of a fault (e.g. eye safety circuit activated), cycling this control signal resets the module. Host systems should allow a 10ms interval between successive assertions of this control signal.

Transmit Fault (TX1\_FAULT and TX2\_FAULT)

A catastrophic laser fault will activate the transmitter signal, TX\*\_FAULT, and disable the laser. This signal is an open collector output (pull-up required on the host board). A low signal indicates normal laser operation and a high signal indicates a fault. The TX\*\_FAULT will be latched high when a laser fault occurs and is cleared by toggling the TX\*\_DISABLE input or cycling the power of the dual-transmitter. The transmitter fault condition can also be monitored via the optional 2-wire serial interface (address A2, byte 110, bit 2).

**050-319 Product Brief**  
**PCB Mount Dual-Transmitter for Single Mode Fiber**  
**100 Mbps – 4.25 Gbps, FP Lasers, 3.3V**

Eye Safety Circuit

The Transmitters provides Class 1 eye safety by design and is compliant with US FDA CDRH AEL Class 1 and EN(IEC) 60825-1,2, EN60950 Class 1. The eye safety circuit continuously monitors optical output power levels and will disable the transmitter and assert a TX\_FAULT signal upon detecting an unsafe condition. Such unsafe conditions can be created by inputs from the host board (Vcc fluctuation, unbalanced code) or faults within the module.

**FUNCTIONAL I/O**

The PC board mount dual-transmitter accepts industry standard differential signals such as LVPECL and CML within the scope of the SFP MSA. To simplify board requirements, transmitter bias resistors and ac coupling capacitors are incorporated, per SFF-8074i, and hence are not required on the host board. The module is AC-coupled and internally terminated.

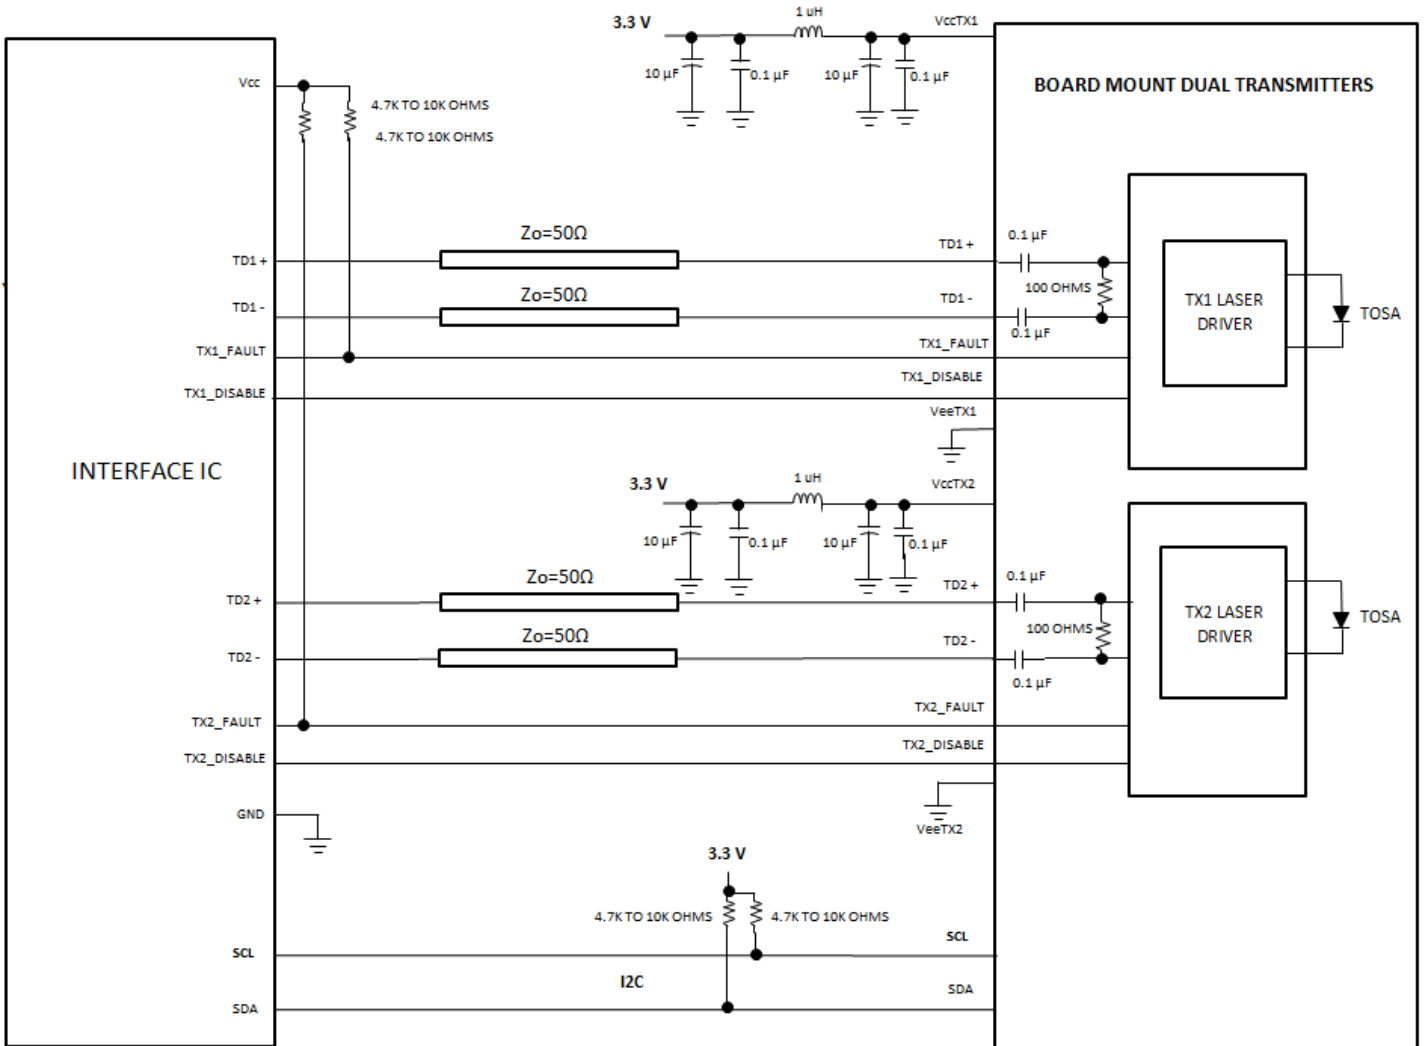

Figure 3 illustrates a recommended interface circuit to link the PC board mount dual-transmitter to the supporting Physical Layer integrated circuits.

The PC board mount dual-transmitter interfaces with the host circuit board through twenty I/O pins identified by function in Table 7. The dual-transmitter high speed transmit and receive interfaces require SFP MSA compliant signal lines on the host board. The TX1\_DISABLE, TX2\_DISABLE, TX1\_FAULT and TX2\_FAULT require TTL lines on the host board (per SFF-8074i) if used. If an application chooses not to take advantage of the functionality of these pins TX1\_Disable and TX2\_Disable need to be tied to GND, TX1\_Fault , TX2\_Fault do not need to be connected.

**100 Mbps – 4.25 Gbps, FP Lasers, 3.3V**

Digital Diagnostic Interface and Serial Identification (EEPROM)

The PCB mount Dual-Transmitter is derived from the SFF-8074i SFP specification and with SFF-8472, the SFP specification for Digital Diagnostic Monitoring Interface, but modified to account for Dual-Transmitter functionality. Both specifications can be found at <http://www.sffcommittee.org>.

**FIGURE 4 – DIGITAL DIAGNOSTIC MEMORY MAP OVERVIEW**

The PCB mount Dual-Transmitter features EEPROM for Serial ID, which contains the product data stored for retrieval by host equipment. This data is accessed via the 2-wire serial EEPROM protocol of the ATMEL AT24C01A or similar, derived from with the industry standard SFP Multi-Source Agreement but modified to account for Dual-Transmitter functionality. The base EEPROM memory, bytes 0-255 at memory address A0h, is organized in compliance with SFF-8074i.

### Required Host Board Components

A power supply noise rejection filter as describe in SFP MSA is required on the host PCB to meet data sheet performance. This filter incorporates an inductor which should be rated 400 mADC and 1  $\Omega$  series resistance or better. It should not be replaced with a ferrite. The required filter is illustrated in Figure 4. Also, the host PCB for the board mount dual-transmitter requires 4.7 K to 10 K $\Omega$  pull-up resistors for TX1\_FAULT, TX2\_FAULT, SCA and SDL lines.

### Fiber Compatibility

The dual-transmitter is capable of transmission at 2 to 550 meters with 50/125  $\mu$ m fiber, and at 2 to 275 meters with 62.5/125  $\mu$ m fiber, for 1.25 GBd Ethernet. It is capable of transmission up to 550m with 50/125  $\mu$ m fiber and up to 300m with 62.5/125  $\mu$ m fiber, for 1.0625 GBd Fiber Channel.

### Electrostatic Discharge (ESD)

The Dual-transmitter is compatible with ESD levels found in typical manufacturing and operating environments as described JEDEC EIA JESD22-A114-A, Class 1 (<2000Volts) HBM. Glenair recommends that devices are handled with ESD precautions to limit exposure to below 500V HBM.

There are two design cases in which immunity to ESD damage is important. The first case is during handling of the dual-transmitter prior to insertion to the host board. To protect the dual-transmitter, it's important to use standard industry ESD handling precautions. These precautions include using grounded wrist straps, work benches, and floor mats in ESD controlled areas. The ESD sensitivity of the Glenair board mount dual-transmitter is compatible with typical industry production environments.

The second case to consider is static discharges to the exterior of the host equipment after installation, in which case the dual-transmitter may be subject to system-level ESD requirements.

---

Application Support

To assist in the dual-transmitter design and evaluation process, Glenair offers the following aids:

- Evaluation board & Product Manual, part number 050-330-MMF-EVALBOARD, which facilitates in the testing of the board mount dual-transmitter.
- 3D Step file to support modeling of mechanical fit and routing
- PADS schematic and PCB layout library files that can be exported into customer's PCB software design program
- Applications Aid Example of PCB layout including details of high speed transmission designs

Customer Manufacturing Processes

This module is mounted with screws and interfaces with a high-speed low cost surface mount electrical connector residing on the host PC board. The board mount dual-transmitter is not designed for aqueous wash, IR reflow, or wave soldering processes and should be mounted on the host board after host PC board has been through its assembly process.

Notes:

1. Temperature (Temp) is decoded as a 16 bit signed twos compliment integer in increments of 1/256 °C.
2. Supply voltage (VCC) is decoded as a 16 bit unsigned integer in increments of 100 µV.
3. Laser bias current (Tx Bias) is decoded as a 16 bit unsigned integer in increments of 2 µA.
4. Transmitted average optical power (Tx Pwr) is decoded as a 16 bit unsigned integer in increments of 0.1 µW.
5. Reserved
6. Bytes 56-94 are not intended from use but have been set to default values per SFF-8472.
7. Bytes 95 is a checksum calculated (per SFF-8472) and stored prior to product shipment.
8. Byte 127 accepts a write but performs no action (reserved legacy byte).
9. Bytes 128-247 are write enabled (customer writable).

**ACCESSORIES**

**Fiber Optic Jumper Cables to support connection to Mil/Aerospace Connectors**

**KEY FEATURES:**

- Jumper cable between Glenair Dual-transmitter (end A) and Mil/Aero Connector termini (End B)
- Offered with either Multimode and Single Mode fibers

**FIGURE 6**  
**Fiber Optic Jumper Cable Assembly (see separate Glenair sales drawing FA02454 for details)**

**PCB Threaded Inserts, PN 059-0007**

**KEY FEATURES**

- Simplifies installation of board mount dual-transmitters eliminating the need for washers and nuts
- Soldered to PCB to eliminate need for handling nuts during assembly
- Existing Options to support PCB thickness from 0.03" to 0.92"
- Can support thicker PCB if required

**EVALUATION Boards, PN 050-330, Include**

- MANUAL with test block diagram, schematic and Evaluation board PCBA
- Multiple types of board mount Dual-transmitter modules supported by this evaluation board
- 2 fiber optic cables, GC to LC
