## 1/4, 1/3-Duty General-Purpose LCD Display Driver

### Overview

The LC75879PT is the 1/4 duty and 1/3 duty general-purpose microprocessor-controlled LCD driver that can be used in applications such as frequency display in products with electronic tuning. In addition to being able to drive up to 272 segments directly, the LC75879PT can also control up to 8 general-purpose output ports. Because it has the PWM output of a maximum of 3 ch, the brightness control of the LED backlight of RGB can be done. Incorporation of an oscillation circuit helps to reduce the number of external resistors and capacitors required.

### Features

- Support for 1/4-duty 1/3-bias or 1/3-duty 1/3-bias drive techniques under serial data control.
  - When 1/4-duty: Capable of driving up to 272 segments
  - When 1/3-duty: Capable of driving up to 207 segments
- Serial data input supports CCB format communication with the system controller (Support 3.3V and 5V operation).
- Serial data control of the power-saving mode based backup function and the all segments forced off function.
- Serial data control of switching between the segment output port and general-purpose output portfunction. (Support for up to 8 general-purpose output ports)
- Support for the PWM output function of a maximum of 3ch (It can output from the general-purpose output port).
- Support for clock output function of 1ch (It can output from the general-purpose output port).
- Serial data control of the frame frequency of the common and segment output waveforms.
- Serial data control of switching between the internal oscillator operating mode and external clock operating mode.
- High generality, since display data is displayed directly without the intervention of a decoder circuit.
- Built-in display contrast adjustment circuit.
- The INH pin allows the display to be forced to the off state.
- Incorporation of an oscillator circuit (Incorporation of resistor and capacitor for an oscillation).

- CCB is a registered trademark of SANYO Electric Co., Ltd.
- CCB is SANYO Semiconductor's original bus format. All bus addresses are managed by SANYO Semiconductor for this format.

■ Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

# LC75879PT

### 3. 1/4 duty (Simple mode transfer)

- When 201 or more segments are used  
All 320 bits of serial data must be sent.

- When fewer than 201 segments are used  
Either 160 or 240 bits of serial data must be sent, depending on the number of segments to be used.  
However, the serial data shown below (the D1 to D136 display data and the control data) must always be sent.

### 4. 1/3 duty (Simple mode transfer)

- When 142 or more segments are used  
All 240 bits of serial data must be sent.

- When fewer than 142 segments are used  
The 160 bits of serial data must be sent.  
However, the serial data shown below (the D1 to D141 display data and the control data) must always be sent.

## LC75879PT

(4) OC ... Internal oscillator operating mode/external clock operating mode switching control data

This control data bit selects either the internal oscillator operating mode or external clock operating mode.

OC	Fundamental clock operating mode	I/O pin (S69/OSCI) state
0	Internal oscillator operating mode	S69
1	External clock operating mode	OSCI

Note: S69 : Segment output

OSCI : External clock input

(5) P0 to P3 ... Segment output port/general-purpose output port switching control data

These control data bits switch the segment output port/general-purpose output port functions of the S1/P1 to S8/P8 output pins.

Control data				Output pin state							
P0	P1	P2	P3	S1/P1	S2/P2	S3/P3	S4/P4	S5/P5	S6/P6	S7/P7	S8/P8
0	0	0	0	S1	S2	S3	S4	S5	S6	S7	S8
0	0	0	1	P1	S2	S3	S4	S5	S6	S7	S8
0	0	1	0	P1	P2	S3	S4	S5	S6	S7	S8
0	0	1	1	P1	P2	P3	S4	S5	S6	S7	S8
0	1	0	0	P1	P2	P3	P4	S5	S6	S7	S8
0	1	0	1	P1	P2	P3	P4	P5	S6	S7	S8
0	1	1	0	P1	P2	P3	P4	P5	P6	S7	S8
0	1	1	1	P1	P2	P3	P4	P5	P6	P7	S8
1	0	0	0	P1	P2	P3	P4	P5	P6	P7	P8

Note1: Sn(n=1 to 8): Segment output ports

Pn(n=1 to 8): General-purpose output ports

Note2: When are setting (P0,P1,P2,P3)=(1,0,0,1), (1,0,1,0), (1,0,1,1) and (1,1,X,X), the all P1/S1 to P8/S8 output pins selects the segment output port. X: don't care

The table below lists the correspondence between the display data and the output pins when these pins are selected to be general-purpose output ports (general-purpose output function).

Output pin	Correspondence display data	
	1/4 duty	1/3 duty
S1/P1	D1	D1
S2/P2	D5	D4
S3/P3	D9	D7
S4/P4	D13	D10
S5/P5	D17	D13
S6/P6	D21	D16
S7/P7	D25	D19
S8/P8	D29	D22

For example, if the circuit is operated in 1/4 duty and the S4/P4 output pin is selected to be a general-purpose output port and is set general-purpose output function, the S4/P4 output pin will output a high level when the display data D13 is 1, and will output a low level when D13 is 0.

(6) DT ... 1/4-duty 1/3-bias drive or 1/3-duty 1/3-bias drive switching control data

This control data bit selects either 1/4-duty 1/3-bias drive or 1/3-duty 1/3-bias drive.

DT	Drive scheme	The COM4/S67 pin state
0	1/4-duty 1/3-bias drive	COM4
1	1/3-duty 1/3-bias drive	S67

Note: COM4 : Common output

S67 : Segment output

## LC75879PT

### (7) SC ... Segment on/off control data

This control data bit controls the on/off state of the segments.

SC	Display state
0	On
1	Off

Note that when the segments are turned off by setting SC to 1, the segments are turned off by outputting segment off waveforms from the segment output pins.

### (8) BU ... Normal mode/power-saving mode control data

This control data bit selects either normal mode or power-saving mode.

BU	Mode
0	Normal mode
1	Power saving mode ( In this mode, the internal oscillator circuit stops oscillation (the S69/OSCI pin is configured for segment output) if the IC is in the internal oscillator operating mode (OC=0) and the IC stops receiving external clock signals (the S69/OSCI pin is configured for external clock input) if the IC is in the external clock operating mode (OC=1). The common and segment output pins go to the V <sub>SS</sub> level. However, the S1/P1 to S8/P8 output pins can be used as general-purpose output ports under the control of the data bits P0 to P3. (The general-purpose output port P1 to P4 can not be used as clock output or PWM output).

### (9) PF0 to PF3 ... PWM output waveform frame frequency setting control data

These control data bits set the frame frequency of the PWM output waveforms. However, when the PWM output function isn't used, these control data bits become invalid. In addition, when the external clock operating frequency is set the  $f_{CK2}=38[\text{kHz}]$  typ (EXF="1") in external clock operating mode (OC="1") or when the serial data transfer is the simple mode transfer, these control data bits become invalid.

Control data				PWM output waveform frame frequency $f_p[\text{Hz}]$	
PF0	PF1	PF2	PF3	Internal oscillator operating mode (The control data OC is 0, $f_{osc}=300[\text{kHz}]$ typ)	External clock operating mode (The control data OC is 1 and EXF is 0, $f_{CK1}=300[\text{kHz}]$ typ)
0	0	0	0	$f_{osc}/1536$	$f_{CK1}/1536$
1	0	0	0	$f_{osc}/1408$	$f_{CK1}/1408$
0	1	0	0	$f_{osc}/1280$	$f_{CK1}/1280$
1	1	0	0	$f_{osc}/1152$	$f_{CK1}/1152$
0	0	1	0	$f_{osc}/1024$	$f_{CK1}/1024$
1	0	1	0	$f_{osc}/896$	$f_{CK1}/896$
0	1	1	0	$f_{osc}/768$	$f_{CK1}/768$
1	1	1	0	$f_{osc}/640$	$f_{CK1}/640$
0	0	0	1	$f_{osc}/512$	$f_{CK1}/512$
1	0	0	1	$f_{osc}/384$	$f_{CK1}/384$
0	1	0	1	$f_{osc}/256$	$f_{CK1}/256$

Note : When is setting (PF0,PF1,PF2,PF3)=(1,1,0,1) and (X,X,1,1), the frame frequency is same as frame frequency at the time of the (PF0,PF1,PF2,PF3)=(1,0,1,0) setting ( $f_{osc}/896$ ,  $f_{CK1}/896$ ).

X: don't care

## LC75879PT

### (10) FC0 to FC2 ... Common/segment output waveform fram frequency control data

These control data bits set the frame frequency of the common and segment output waveforms.

Control data			Common/segment output waveform frame frequency fo[Hz]		
FC0	FC1	FC2	Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz] typ)	External clock operating mode (The control data OC is 1 and EXF is 0, f <sub>CK1</sub> =300[kHz] typ)	External clock operating mode (The control data OC is 1 and EXF is 1, f <sub>CK2</sub> =38[kHz] typ)
1	1	0	fosc/6144	f <sub>CK1</sub> /6144	f <sub>CK2</sub> /768
1	1	1	fosc/4608	f <sub>CK1</sub> /4608	f <sub>CK2</sub> /576
0	0	0	fosc/3072	f <sub>CK1</sub> /3072	f <sub>CK2</sub> /384
0	0	1	fosc/2304	f <sub>CK1</sub> /2304	f <sub>CK2</sub> /288
0	1	0	fosc/1536	f <sub>CK1</sub> /1536	f <sub>CK2</sub> /192
0	1	1	fosc/1152	f <sub>CK1</sub> /1152	f <sub>CK2</sub> /144
1	0	0	fosc/768	f <sub>CK1</sub> /768	f <sub>CK2</sub> /96

Note: When is setting (FC0,FC1,FC2)=(1,0,1), the frame frequency is same as frame frequency at the time of the (FC0,FC1,FC2)=(0,0,0) setting (fosc/3072, f<sub>CK1</sub>/3072, f<sub>CK2</sub>/384).

### (11) CT0 to CT2 ... Display contrast setting control data

These control data bits set display contrast.

CT0 to CT2: Sets the display contrast (7 steps)

CT0	CT1	CT2	LCD drive 3/3 bias voltage V <sub>DD0</sub> level
0	0	0	1.00V <sub>DD</sub> =V <sub>DD</sub> -(0.05V <sub>DD</sub> ×0)
1	0	0	0.95V <sub>DD</sub> =V <sub>DD</sub> -(0.05V <sub>DD</sub> ×1)
0	1	0	0.90V <sub>DD</sub> =V <sub>DD</sub> -(0.05V <sub>DD</sub> ×2)
1	1	0	0.85V <sub>DD</sub> =V <sub>DD</sub> -(0.05V <sub>DD</sub> ×3)
0	0	1	0.80V <sub>DD</sub> =V <sub>DD</sub> -(0.05V <sub>DD</sub> ×4)
1	0	1	0.75V <sub>DD</sub> =V <sub>DD</sub> -(0.05V <sub>DD</sub> ×5)
0	1	1	0.70V <sub>DD</sub> =V <sub>DD</sub> -(0.05V <sub>DD</sub> ×6)

Note: When is setting (CT0,CT1,CT2)=(1,1,1), the LCD drive 3/3 bias voltage V<sub>DD0</sub> level is 1.00V<sub>DD</sub>.

Note that although the display contrast can be adjusted by operating the built-in display contrast adjustment circuit, it can also be adjusted by modifying the supply pin V<sub>DD</sub> voltage level.

# LC75879PT

(12) W10 to W15, W20 to W25, W30 to W35 ..... PWM data of the PWM output

These control data bits set the pulse width of the PWM output P1 to P4. However, when the PWM output function isn't used, these control data bits become invalid. In addition, when the external clock operating frequency is set the  $f_{CK2}=38[\text{kHz}]$  typ (EXF="1") in external clock operating mode (OC= "1") or when the serial data transfer is the simple mode transfer, these control data bits become invalid.

### Clock output waveforms

Control data		Clock frequency of clock output P1 $f_c (=1/T_c)$ [Hz]
PS10	PS11	
1	0	Clock output function (fosc/2, fCK/2)
0	1	Clock output function (fosc/8, fCK/8)

Display Control and the  $\overline{\text{INH}}$  Pin

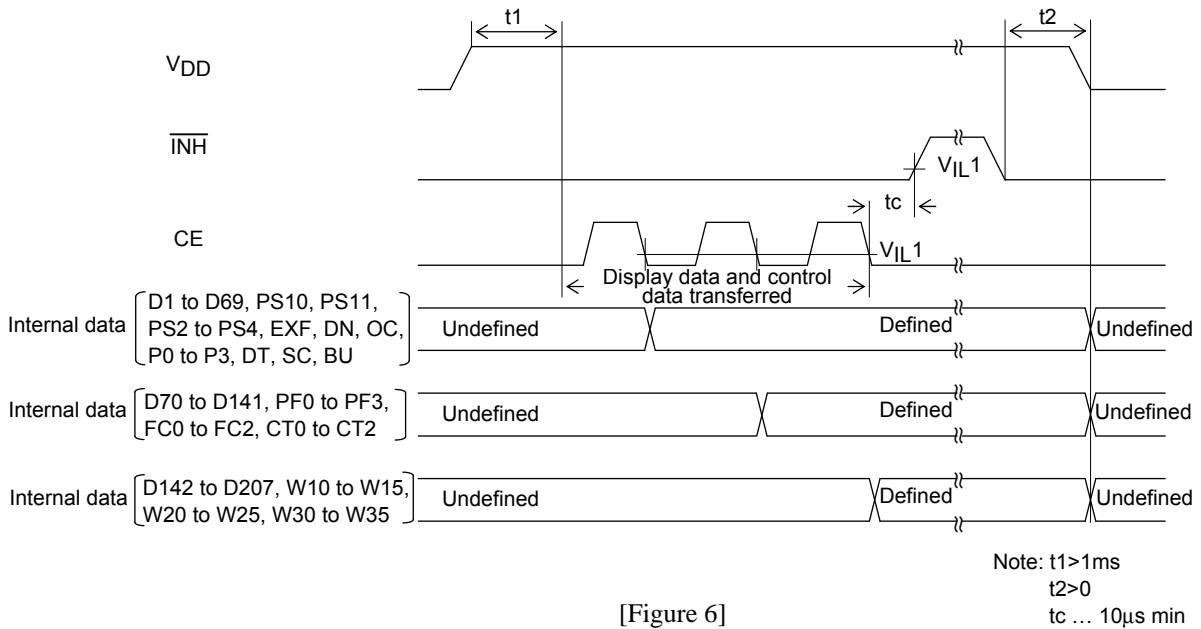

Since the LSI internal data (1/4 duty : the display data D1 to D272 and the control data, 1/3 duty : the display data D1 to D207 and the control data) is undefined when power is first applied, applications should set the  $\overline{\text{INH}}$  pin low at the same time as power is applied to turn off the display (This sets the S1/P1 to S8/P8, S9 to S66, COM1 to COM3, COM4/S67, S68, and S69/OSCI pins to the  $V_{SS}$  level.) and during this period send serial data from the controller. The controller should then set the  $\overline{\text{INH}}$  pin high after the data transfer has completed. This procedure prevents meaningless display at power on (See Figure 5, Figure 6, Figure 7 and Figure 8.)

(1) 1/4 duty

[Figure 5]

(2) 1/3 duty

[Figure 6]

# LC75879PT

## (3) 1/4 duty (Simple mode transfer)

[Figure 7]

## (4) 1/3 duty (Simple mode transfer)

[Figure 8]

**Notes on Controller Transfer of Display Data**

When using the LC75879PT in 1/4 duty, applications transfer the display data (D1 to D272) in four operations, and in 1/3 duty, they transfer the display data (D1 to D207) in three operations. In either case, applications should transfer all of the display data within 30 ms to maintain the quality of displayed image.

**S69/OSCI Pin Peripheral Circuit**

(1) Internal oscillator operating mode (control data OC=0)

Connect the S69/OSCI pin to the LCD panel when the internal oscillator operating mode is selected.

(2) External clock operating mode (control data OC=1)

When the external clock operating mode is selected, insert a current protection resistor  $R_g$  (2.2 to 22k $\Omega$ ) between the S69/OSCI pin and external clock output pin (external oscillator). Determine the value of the resistance according to the allowable current value at the external clock output pin. Also make sure that the waveform of the external clock is not heavily distorted.

Note: Allowable current value at external clock output pin >  $\frac{V_{DD}}{R_g}$

(3) Unused pin treatment

When the S69/OSCI pin is not to be used, select the internal oscillator operating mode (setting control data OC to 0) to keep the pin open.

**P1 to P4 pin peripheral circuit**

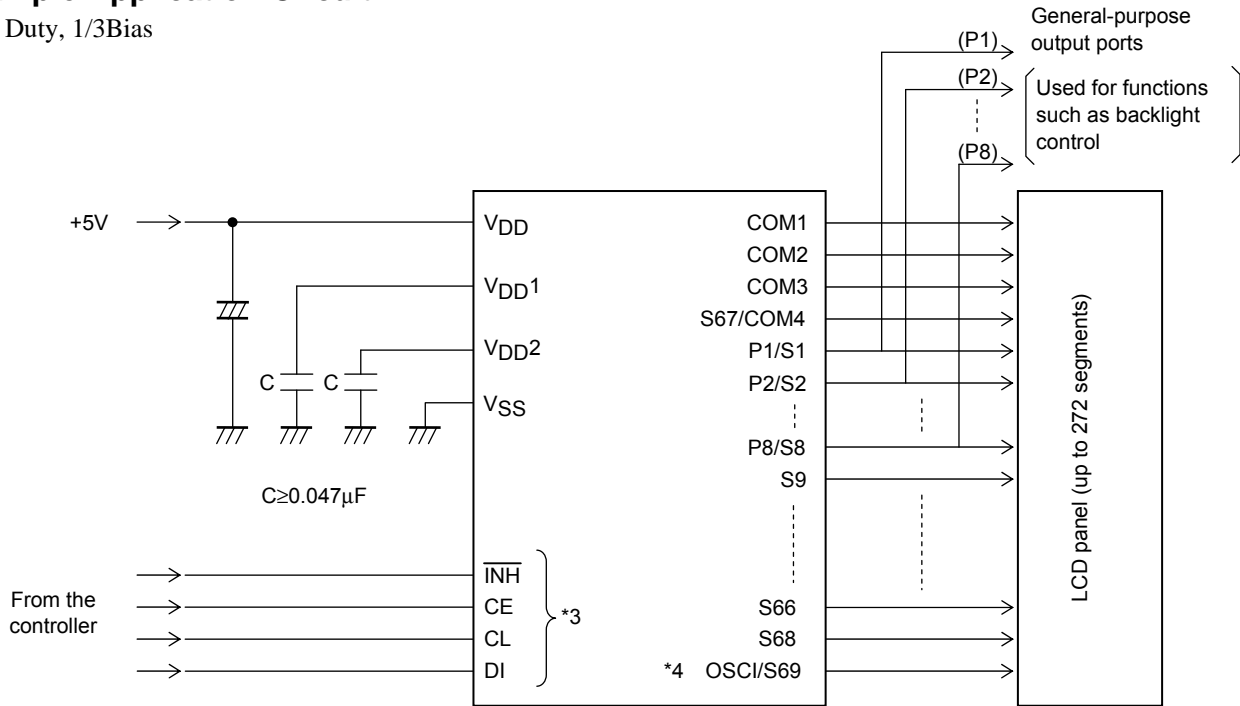

It is recommended the circuit shown below be used to adjust the brightness of the LED backlight using the PWM output P1 to P4

# LC75879PT

## Sample Application Circuit 1

1/4 Duty, 1/3Bias

\*3 The pins to be connected to the controller (CE, CL, DI,  $\overline{\text{INH}}$ ) can handle 3.3V or 5V.

\*4 Connect the S69/OSCI pin to the LCD panel in the internal oscillator operating mode and insert a current protection resistor  $R_g$  (2.2 to 22k $\Omega$ ) between the S69/OSCI pin and external clock output pin (external oscillator) in the external clock operating mode (see "S69/OSCI Pin Peripheral Circuit").

## Sample Application Circuit 2

1/3 Duty, 1/3 Bias

\*3 The pins to be connected to the controller (CE, CL, DI,  $\overline{\text{INH}}$ ) can handle 3.3V or 5V.

\*4 Connect the S69/OSCI pin to the LCD panel in the internal oscillator operating mode and insert a current protection resistor  $R_g$  (2.2 to 22k $\Omega$ ) between the S69/OSCI pin and external clock output pin (external oscillator) in the external clock operating mode (see "S69/OSCI Pin Peripheral Circuit")

- SANYO Semiconductor Co.,Ltd. assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein.
- SANYO Semiconductor Co.,Ltd. strives to supply high-quality high-reliability products, however, any and all semiconductor products fail or malfunction with some probability. It is possible that these probabilistic failures or malfunction could give rise to accidents or events that could endanger human lives, trouble that could give rise to smoke or fire, or accidents that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor Co.,Ltd. products described or contained herein are controlled under any of applicable local export control laws and regulations, such products may require the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written consent of SANYO Semiconductor Co.,Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO Semiconductor Co.,Ltd. product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production.
- Upon using the technical information or products described herein, neither warranty nor license shall be granted with regard to intellectual property rights or any other rights of SANYO Semiconductor Co.,Ltd. or any third party. SANYO Semiconductor Co.,Ltd. shall not be liable for any claim or suits with regard to a third party's intellectual property rights which has resulted from the use of the technical information and products mentioned above.

This catalog provides information as of May, 2010. Specifications and information herein are subject to change without notice.
