Notes:

- Models are available with leakage current specified as low as 500 μ A (at 240 VAC) / 300 μ A (at 120 VAC). Contact the factory for details.
- Output regulation includes line & load.
- Ripple & noise is measured from 10 Hz to 20 MHz. Measurement connection to the unit is made with a 0.1 μ F ceramic capacitor & a 22 μ F electrolytic capacitor connected in parallel.
- Transient recovery is measured to within a 1% error band for a load step change of 50% to 100%.
- Isolation specifications are production HI-Pot tested for 3 seconds.
- The full output range (see table above) is covered in the safety agency certification. Standard models are factory set to the "Preset" voltage. This may be set

to other levels within the range without affecting the agency certification. For more information, contact the factory.

- The maximum continuous output power level, (combined for V1 & V2) is 300W (with 18 CFM) for the MPA300Dx-1224 & 250W for all other models. For convection cooling, the maximum continuous output power level (combined for V1 & V2) is 150W for the MPA300Dx-1224 & 125W for all other models. For more information, contact the factory.
- A 10% minimum load is required to maintain regulation and ripple specifications.
