

POLARIZATION INSENSITIVE FIBER ISOLATOR ARRAY (SINGLE STAGE)

OISA Series

Product Description

Oplink's single-stage, multi-port isolator is an array device with the identical package size of a single-port isolator. It offers port options of dual or triple ports on both input and output sides. The Oplink isolator array minimizes back reflection and back scattering in the reverse direction for any state of polarization. It features low cost with high performance including low insertion loss, low channel cross talk, high return loss, low polarization dependent loss (PDL) and low polarization mode dispersion (PMD). Oplink's innovative array solution provides significant space savings in EDFA array or multi stage EDFA applications.
