

Ultra-Low-Noise, High PSRR, Low-Dropout, 300mA Linear Regulator

Features

- **Wide Operating Voltage: 2.5~6V**
- **Low Dropout Voltage: 290mV @ 3V/300mA**
- **Guaranteed 300mA Output Current**
- **High PSRR: 70dB**
- **Current-Limit Protection**
- **Controlled Short-Circuit Current: 50mA**
- **Over-Temperature Protection**
- **Stable with 1mF Capacitor for Any Load**
- **Excellent Load/Line Transient**
- **SOT-23-5, TSOT-23-5, SOT-23-3, SC-70-5, SC-82-4, TDFN1.5x1.5-6 and TDFN1.6x1.6-6 Packages**
- **Lead Free and Green Devices Available (RoHS Compliant)**

General Description

The APL5320/A is a P-channel low dropout linear regulator which needs only one input voltage from 2.5 to 6V, and delivers current up to 300mA to set output voltage. It also can work with low ESR ceramic capacitors and is ideal for using in the battery-powered applications such as notebook computers and cellular phones. Typical dropout voltage is only 290mV at 300mA loading.

The APL5320/A provides several versions of fixed output voltages ranging. Current-limit with current foldback and thermal shutdown functions protects the device against current over-loads and over-temperature. The APL5320/A is available in SOT-23-5, TSOT-23-5, SOT-23-3, SC-70-5, SC-82-4, TDFN1.5x1.5-6 and TDFN 1.6x1.6-6 packages.

Applications

- **Cellular Phones**
- **Portable and Battery-Powered Equipments**
- **Laptops, Palmtops, Notebook Computers**
- **Wireless LANs**
- **Portable Information Appliances**
- **GPSes**

Simplified Application Circuit

Pin Configuration

 = Exposed Pad (connected to ground plane for better heat dissipation)

ANPEC reserves the right to make changes to improve reliability or manufacturability without notice, and advise customers to obtain the latest version of relevant information to verify before placing orders.

Absolute Maximum Ratings (Note 1)

Symbol	Parameter	Rating	Unit
V_{IN}	VIN to GND Voltage	-0.3 ~ 6.5	V
V_{OUT}	VOUT to GND Voltage	-0.3 ~ 6.5	V
$V_{\overline{SHDN}}$	\overline{SHDN} to GND Voltage	-0.3 ~ 6.5	V
T_J	Maximum Junction Temperature	-40 ~ 150	°C
T_{STG}	Storage Temperature	-65 ~ 150	°C
T_{SDR}	Maximum Lead Soldering Temperature, 10 Seconds	260	°C

Note1: Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Thermal Characteristics

Symbol	Parameter	Typical Value	Unit
θ_{JA}	Junction-to-Ambient Resistance in Free Air ^(Note 2)	SOT-23-5	240
		TSOT-23-5	250
		SOT-23-3	240
		SC-70-5/SC-82-4	325
		TDFN1.6x1.6-6	165
		TDFN1.5x1.5-6	180
θ_{JC}	Junction-to-Case Resistance in Free Air	SOT-23-5	120
		TSOT-23-5	130
		SOT-23-3	120
		SC-70-5/SC-82-4	220

Note 2 : θ_{JA} is measured with the component mounted on a high effective thermal conductivity test board in free air.

Recommended Operating Conditions (Note 3)

Symbol	Parameter	Range	Unit
V_{IN}	VIN Input Voltage	2.5 ~ 6	V
$V_{\overline{SHDN}}$	\overline{SHDN} Input Voltage	2.5 ~ 6	V
I_{OUT}	VOUT Output Current	0 ~300	mA
V_{OUT}	Output Voltage	Fixed Voltage	
C_{OUT}	Output Capacitor	1~22	μF
T_A	Ambient Temperature	-40 ~ 85	°C
T_J	Junction Temperature	-40 ~ 125	°C

Note 3 : Refer to the typical application circuit.

Electrical Characteristics

Unless otherwise specified, these specifications apply over $V_{IN}=V_{OUT}+1V$, $C_{IN}=C_{OUT}=1\mu F$ and $T_A=-40\sim 85^\circ C$. Typical values are at $T_A=25^\circ C$.

Symbol	Parameter	Test Conditions	APL5320/A			Unit	
			Min.	Typ.	Max.		
UNDER-VOLTAGE LOCKAGE (UVLO) AND SUPPLY CURRENT

4	-	2, 5	-	4,5	NC	NC Pin.
5	2	4	3	3	VOUT	Regulator Output Pin.

Block Diagram

Typical Application Circuit

Function Description

Internal Soft-Start

An internal soft-start function controls rising rate of the output voltage to limit the surge current at start-up. The typical soft-start interval is about 60 μ s.

Thermal Shutdown

A thermal shutdown circuit limits the junction temperature of APL5320/A. When the junction temperature exceeds +160°C, a thermal sensor turns off the output PMOS, allowing the device to cool down. The regulator regulates the output again through initiation of a new soft-start cycle after the junction temperature cools by 40°C. The thermal shutdown is designed with a 40°C hysteresis to lower the average junction temperature during continuous thermal overload conditions, extending lifetime of the device.

For normal operation, device power dissipation should be externally limited so that junction temperature will not exceed 125°C.

Current-Limit with Current Foldback

The APL5320/A monitors the current via the output PMOS and limits the maximum current. When the output current reaches the current-limit threshold, current-limit with current foldback circuit starts to work to prevent load and APL5320/A from damages during overload or short-circuit conditions. Typical foldback current is about 50mA.

Shutdown Control

The APL5320/A has an active-low shutdown function. Forcing $\overline{\text{SHDN}}$ high (>1.5V) enables the V_{OUT} ; forcing $\overline{\text{SHDN}}$ low (<0.4V) disables the V_{OUT} . The $\overline{\text{SHDN}}$ can not be left floating. If it is not used, connect it to VIN for normal operation.

Under-Voltage Lock Out (UVLO)

The APL5320/A monitors the input voltage to prevent wrong logic control. The UVLO function initiates a soft-start process after input voltage exceeds its rising UVLO threshold during power on. The UVLO function also shuts off the output when the input voltage falls below its falling threshold.

Application Information

Input capacitor

The APL5320/A requires proper input capacitors to supply surge current during stepping load transients to prevent the input rail from dropping. Because the parasitic inductor from the voltage sources or other bulk capacitors to the VIN limit the slew rate of the surge current, place the Input capacitors near VIN as close as possible. Input capacitors should be larger than 1μF and a minimum ceramic capacitor of 1μF is necessary.

Output Capacitor

The APL5320/A needs a proper output capacitor to maintain circuit stability and improve transient response over-temperature and current. In order to insure the circuit stability, the proper output capacitor value should be larger than 1μF. With X5R and X7R dielectrics, 1μF is sufficient at all operating temperatures. Large output capacitor value can reduce noise and improve load-transient response and PSRR, Figure 1 shows the curves of allowable ESR range as the function of load current for various output capacitor values.

Figure1. Stable C_{OUT} ESR Range

Operation Region and Power Dissipation

The APL5320/A maximum power dissipation depends on the thermal resistance and temperature difference between the die junction and ambient air. The TDFN1.6x1.6-6 package power dissipation P_D across the device is:

$$P_D = (T_J - T_A) / \theta_{JA}$$

where (T_J - T_A) is the temperature difference between the junction and ambient air. θ_{JA} is the thermal resistance between Junction and ambient air. Assuming the T_A=25°C and maximum T_J=160°C (typical thermal limit threshold), the maximum power dissipation is calculated as:

$$P_D(\text{max})=(160-25)/165=0.81(\text{W})$$

For normal operation, do not exceed the maximum junction temperature rating of T_J=125°C. The calculated power dissipation should be less than:

$$P_D=(125-25)/165=0.6(\text{W})$$

The GND provides an electrical connection to the ground and channels heat away. Connect the GND to the ground by using a large pad or a ground plane.

Layout Consideration

Figure 2 illustrates the layout. Below is a checklist for your layout:

1. Please place the input capacitors close to the VIN.
2. Ceramic capacitors for load must be placed near the load as close as possible.
3. To place APL5320/A and output capacitors near the load is good for performance.
4. Large current paths, the bold lines in figure 2, must have wide tracks.

Figure2. Large Current Paths Shown as Bold Lines

(mm)

Devices Per Unit

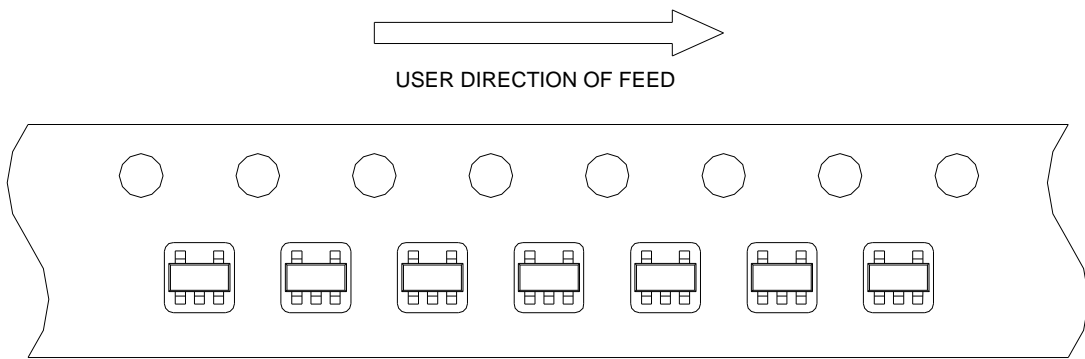

Package Type	Unit	Quantity
SOT-23-5	Tape & Reel	3000
TSOT-23-5	Tape & Reel	3000
SOT-23-3	Tape & Reel	3000
SC-70-5	Tape & Reel	3000
TDFN1.6x1.6-6	Tape & Reel	3000
SC-82-4	Tape & Reel	3000
TDFN1.5x1.5-6	Tape & Reel	3000

Taping Direction Information (Cont.)

SOT-23-3

SC-70-5

TDFN1.6x1.6-6

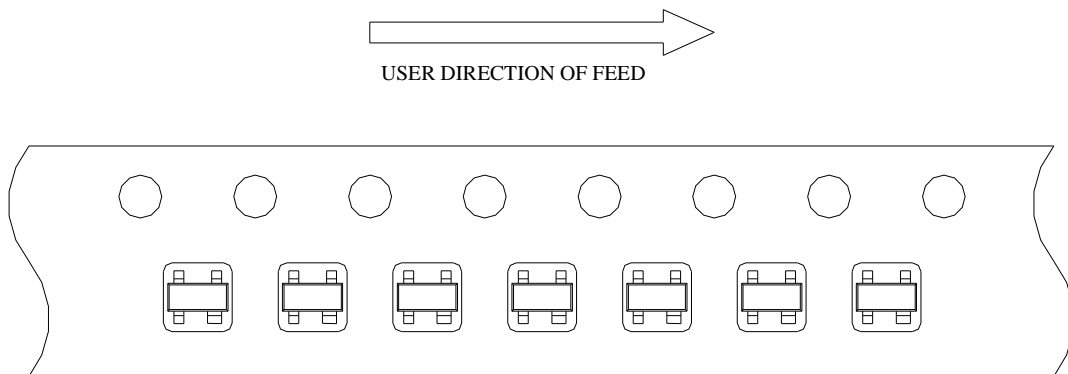

Taping Direction Information

(T)SOT-23-5

SC-82-4

TDFN1.5x1.5-6

Classification Profile

Classification Reflow Profiles

Profile Feature	Sn-Pb Eutectic Assembly	Pb-Free Assembly
Preheat & Soak		
Temperature min (T_{smin})	100 °C	150 °C
Temperature max (T_{smax})	150 °C	200 °C
Time (T_{smin} to T_{smax}) (t_s)	60-120 seconds	60-120 seconds
Average ramp-up rate (T_{smax} to T_p)	3 °C/second max.	3 °C/second max.
Liquidous temperature (T_L)	183 °C	217 °C
Time at liquidous (t_L)	60-150 seconds	60-150 seconds
Peak package body Temperature (T_p)*	See Classification Temp in table 1	See Classification Temp in table 2
Time (t_p)** within 5°C of the specified classification temperature (T_c)	20** seconds	30** seconds
Average ramp-down rate (T_p to T_{smax})	6 °C/second max.	6 °C/second max.
Time 25°C to peak temperature	6 minutes max.	8 minutes max.
* Tolerance for peak profile Temperature (T_p) is defined as a supplier minimum and a user maximum.		
** Tolerance for time at peak profile temperature (t_p) is defined as a supplier minimum and a user maximum.		

Table 1. SnPb Eutectic Process – Classification Temperatures (T_c)

Package Thickness	Volume mm ³ <350	Volume mm ³ ≥350
<2.5 mm	235 °C	220 °C
≥2.5 mm	220 °C	220 °C

Table 2. Pb-free Process – Classification Temperatures (T_c)

Package Thickness	Volume mm ³ <350	Volume mm ³ 350-2000	Volume mm ³ >2000
<1.6 mm	260 °C	260 °C	260 °C
1.6 mm – 2.5 mm	260 °C	250 °C	245 °C
≥2.5 mm	250 °C	245 °C	245 °C

Reliability Test Program

Test item	Method	Description
SOLDERABILITY	JESD-22, B102	5 Sec, 245°C
HOLT	JESD-22, A108	1000 Hrs, Bias @ $T_j=125^\circ\text{C}$
PCT	JESD-22, A102	168 Hrs, 100%RH, 2atm, 121°C
TCT	JESD-22, A104	500 Cycles, -65°C~150°C
HBM	MIL-STD-883-3015.7	VHBM ≥ 2KV
MM	JESD-22, A115	VMM ≥ 200V
Latch-Up	JESD 78	10ms, $1_{tr} \geq 100\text{mA}$

Customer Service

Anpec Electronics Corp.

Head Office :

No.6, Dusing 1st Road, SBIP,

Hsin-Chu, Taiwan, R.O.C.

Tel : 886-3-5642000

Fax : 886-3-5642050

Taipei Branch :

2F, No. 11, Lane 218, Sec 2 Jhongsing Rd.,

Sindian City, Taipei County 23146, Taiwan

Tel : 886-2-2910-3838

Fax : 886-2-2917-3838
