ITT ICS's Water Tight connector is a lightweight, robust and watertight solution designed for military, marine, medical and industrial application. The connector features micro twist pin contact technology and as its name implies the connector is rated for an immersion depth of greater than 20 meters of water.

Specifications

Contact Type	Cable plug and free receptacle crimp, jam nut receptacle PCB
Contacts	Cable plug and free receptacle micro twist pin, receptacle micro socket
Wire Size	24 - 32 AWG
Contact Rating	3 Amps
Voltage Rating	50 Vdc
Insulation Resistance	5,000 Mohm minimum
Dielectric Withstand Voltage	500 Volts
Operating Temperature	-40°C to +100°C
Contact Resistance	8 mOhm maximum
Vibration	20 g's in accordance with MIL-STD-1344 Method 2005, Condition IV
Shock	50 g's in accordance with MIL-STD-1344 Method 2004, Condition E
Durability	2,500 cycles (500 cycles Push Pull)
Shell Plating	RoHS compliant 500 hour salt spray resistant black zinc nickel or electroless nickel
Receptacle Mounting**	Tamper proof jam nut
Receptacle Sealing	Using a conductive 'O' ring, non-conductive 'O' rings are available
EMI Shielding	50db attenuation 100Mhz to 1000Mhz in terminated condition
Coupling	Snap on/Breakaway, bayonet & push pull
Coding	5 polarizing positions; N, A, B, C, and D
Coding Identification*	Individual colors with colored dot on both parts plus indication on the boot; N=blue, A=red, B=green, C=grey and D=yellow
Boot	Cable dependant, either overmoulded or adhered
Sealing	IP68, >20m
Layouts	6 layouts, 7, 14, 19, 37, 40 & 55 contacts
Shell to Shell Resistance	<10 mOhm
Blind Mate	Yes
Cable	ITT standard or customer specified
Cable Earth Termination	360° cable braid termination to the shell
Snap on/Breakaway Forces	30N
Strain Relief	Designed to withstand a 10Kg pull off force minimum
Materials	Shells - Stainless Steel Insulators - Polyester Seals - Fluorosilicone rubber Contacts - Copper alloy with gold over nickel plating

Nemesis Super Clean NEM-SC

B

Mini Circular

Overview ITT ICS's Super Clean Connector is a lightweight, robust, water-tight and field cleanable** solution designed for military, commercial and industrial applications. The connector features pogo pin technology utilizing ITT's unique spring probe pin/pad contact system for a durable and long life connection. The cleanable feature allows users to maintain their systems in the field even in the dirtiest of environments.

**Patent applied for.

Pos-B-Line Contact Alignment

The flexible twist-pin is recessed into the insulator and the rigid socket is exposed, reversing the traditional positions of pin and socket. During mating, the socket is guided into the pin insulator by the lead-in chamfer. The pin is kept from flexing beyond the socket capture radius by the walls of the cavity. The hemispherical weld of controlled radius at the tip of the pin combines with the lead-in chamfers of the socket contact and the pin insulator to cam the pin into alignment. By controlling the welding process and the dimensions of the socket contact and the insulators, it is impossible for the recessed pin to escape the socket capture radius.

Twist Pin Contact Technology

The Nemesis Water Tight connector uses the twist pin contact system. This system was originally developed in the early 1960s and ITT was one of the original interconnect companies to license this technology and improve it. Our forty-five years of experience in manufacturing and establishing a fully automated manufacturing system for this contact has truly given ITT the foremost knowledge in twist pin contact technology.

As the core of the Water Tight connector, the twist pin contact offers a superior electrical and mechanical system that outperforms traditional machined or stamped electrical contact systems. ITT's twist pin system consists of the Micro Socket and the Micro Pin or Twist Pin.

Figure 1

The twist pin contact system consists of several stranded cores making up the wire bundle. The strands are subsequently heat treated and a weld is performed on the tip of each contact. Crimp sleeves are then inserted over the contact and crimp areas are defined to produce a seamless crimp system. The entire twist pin system is referred by ITT as a Pos-A-Line contact alignment system. Our reference to this system identifies that the flexible twist pin is recessed into the insulator and the rigid socket is exposed thus reversing the traditional positions of the pin and socket. During the mating sequence, the socket is guided into the pin insulator by the lead-in chamfer. The pin is kept from flexing beyond the socket capture radius by the walls of the cavity. The hemispherical weld of controlled radius at the tip of the pin combines with the lead-in chamfer of the socket

contact and the pin insulator to cam the pin into alignment. ITT has developed a very robust Six Sigma manufacturing process that controls the welding process as well as the dimensions of the socket contact and insulator material. The net result is a contact system that makes it impossible for the recessed pin to escape the socket capture radius.

The advantages of ITT's twist pin contact system are many and have been field proven in the most demanding applications and environments for over forty-five years. Some of these advantages include:

- Seven points of electrical contact
- Contact and crimp sleeve materials carefully optimized for extremely reliable crimps—No design tradeoffs
- Seamless crimp sleeves
- Multiple 4-indent wire crimps standard
- High mating cycles
- High current handling capabilities
- System qualifications in numerous Aerospace, Defense Electronic, and high temperature Geophysical applications

Pogo Contact Technology

The heart of the Nemesis Super Clean & High Mating connector solutions is ITT's unique spring probe pin/pad contact system. ITT's spring probe contact design utilizes an internal clip mechanism that stays in constant contact with the contact itself. This design helps to reduce electrical resistance. In addition, the spring probe contact system accommodates misalignment issues, making the contact system much more forgiving. This feature along with the high durability of mating cycles allows this contact system to offer higher performance in harsh environments.

The unique ITT spring probe system mates with individual touch pad contact areas. This design allows for a very effective electrical engagement point of contact. Further, the spring probe contact system and touch pads allow for ease of cleanliness in the field where dirt, moisture, mud, sand, and other contaminants may be present. The individual touch pad contacts incorporate no crevices for contaminants to accumulate, a desirable feature in harsh environment field conditions.

The Nemesis Super Clean & High Mating connectors using spring probe contact technology offer the highest reliability for interconnects meeting the toughest performance standards in harsh environments. They have been tested through extensive Military and customer specific test programs to ensure that their design and manufacturability features have indeed met all reliability and field performance requirements. Because ITT's spring probe contact/connectors have been designed and manufactured to exceed various thermal shock, vibration, random shock, and signal performance spectrums this connector technology is becoming one of the technologies of choice in harsh environment electronic systems.

MKJ Series Connectors

Mini Circular

B

The Challenge

ITT has a long history of providing standard and custom MIL-DTL-38999 connectors which meet the most stringent military requirements. ITT's major military and commercial accounts recently approached us requesting that we take our proven high reliability designs and shrink them to decrease weight and size while maintaining the connectors robust environmental performance and high reliability. Along with these requests, ICS received substantial commentary from other markets including Medical, Industrial, and Space, requesting a similar, miniature circular product.

MKJ connector provides significant size and weight reduction while providing electrical and mechanical characteristics of larger connectors

Split tine contact design provides proven reliability in harsh environments

Connector uses size 23 contacts accepting #22 to #28 wire. Contact spacing is reduced to 0.076 inches providing a compact yet robust package.

Master key and 2 secondary keys allow multiple clocking positions

Pogo pin/pad technology. Touch pad contacts increase ease of cleanability, highly desirable in harsh environments.

Intergral band platform allows direct attachment of cable shield to connector.

Double start threads prevent thread damage and allow full connector mating in 1.5 turns. Durable design ideal for harsh shock and vibration environments.

Breakaway design incorporates a simple push/pull mating mechanism allowing quick connector disconnect.

The ITT Solution ...

ITT took on the challenge, driving innovation in mating capabilities and contacts to reduce size and weight while maintaining the high level of quality customers have come to expect from ITT over 90 years of engineering excellence. ITT collated a substantial amount of industry VOC from top tier military and commercial accounts. This feedback arrived from industry leading ICS customers, pioneering products in their fields including satellites & missiles, test and medical equipment, and tactical battlefield gear. Using this information and leveraging our historical product expertise, ITT engineered a product meeting our customers defined mix of Design, Functionality, and Flexibility. The result of this process represents our innovative new product line, Trinity. Offering three coupling methodologies {threaded, bayonet, and breakaway} and a highly engineered design, this innovative product reduces weight and size without sacrificing robust environmental performance or reliability. ITT ICS is proud to introduce our exciting new Trinity product line, engineered to the stringent quality standards for which ITT is world renown.

Technical overview

The Trinity MKJ family of mini circular connectors provides approximate electrical and mechanical characteristics of larger and heavier Military Standard Environmental connectors while reducing weight up to 71% and size up to 52%. All MKJ series connector's shells and jam nuts are available in high quality aluminum alloy or corrosion resistant steel per AMS-QQ-S 763. The MKJ series comes with rear accessory thread or integral band platform for direct attachment of cable shield and overmold. The MKJ series of connectors come with a variety of coupling mechanisms: threaded, breakaway, and bayonet. In addition, a Pogo Pin technology utilizing ITT's unique spring probe pin/touch pad contact system is available. The MKJ series receptacle comes with a variety of mounting options for both crimp and PCB contacts including in-line, jam nut, front mount, and square flange mount, and flange mount. The MKJ0, MKJ1, MKJ3, MKJ4, and MKJ5 feature a master key and 2 secondary keys for positive mating with 4 clocking positions available. The MKJ0 connector is ideal for everyday operations where size and weight are at a premium. The MKJ1 connector uses a double start thread coupling with 1/1/2 turns for a full mate and is ideal for harsh shock and vibration environments. The MKJ3 connector can be fully mated in a 1/4 turn. The MKJ4 connector provides a quick push to mate / pull to unmate disconnect mechanism for fast breakaway connections. The MKJ5 connector utilizes a triple start thread and is fully mated in 1 turn, and is an ideal connector for harsh shock and vibration environments and offers an internal coupling ratchet mechanism along with an EMI grounding spring.

Product Features

- High contact density: size 23 contacts accommodate #22 - #28 wire and allowing 0.076 inch contact spacing
- Available with 3-85 rear release crimp or PCB contacts
- Master key with 2 secondary keys. 4 clocking positions available
- Significant weight and size reduction compared to traditional Mil Standard environmental connectors
- Available in jam nut, in-line, and square flange rear crimp receptacle versions. Jam nut and square flange PCB receptacle versions
- Rear accessory thread or integral band platform for direct attachment of cable shield or overmold
- Wire seal grommet for rear environmental sealing. Pin fluorosilicone interfacial seal provides interface sealing
- Available with double start threads allowing full mating in 1.5 turns
- Available with quick push/pull breakaway mechanism utilizing canted retention spring for quicker mating and demating
- Available with bayonet 1/4 turn locking mechanism
- Available with Pogo Pin technology utilizing ITT's unique spring probe pin/touch pad contact system

Applications

- Medical equipment: test and diagnostic
- Industrial equipment
- Commercial and military aircraft electronics
- Unmanned aerial vehicles
- Missile systems
- Avionic systems
- Satellites
- Sensors
- Instrumentation
- Interconnections for helmets, weapons, battery packs, night vision goggles, aircraft headsets, etc.
- Navigation and Telemetry equipment
- Ruggedized computers and hand held communications equipment

MKJ4

Breakaway Coupling

MKJ5

Triple Start Ratchet Locking

Multiple Styles for all applications!

Series MKJ Performance	
Contact size / Spacing	#23 / 0.076 inches (1.9 mm)
Contact Type	Solder Cup, Rear Crimp or PCB Mount
Wire Accomodation	#22 - #28 AWG
Current Rating	5 Amps Maximum
Voltage Rating	500 VAC RMS Sea Level
Insulation Resistance	5000 Megaohms Minimum
Operating Temperature	-55 degrees C to +150 degrees C
Contact Resistance	8 Milliohms Maximum
Vibration	20 g's in Accordance with MIL-STD-1344 Method 2005, Condition IV
Shock	300 g's (MKJ1) 50 g's (MKJ0 and MKJ4) in Accordance with MIL-STD-1344 Method 2004, Condition E
EMI Shielding Effectiveness	40dB Attenuation, 100 MHz to 1000 MHz
Coupling	Threaded, Quick Disconnect Pogo Pin
Coding	Master key and 2 secondary keys. 4 clocking positions available
Housing material	Aluminum and Stainless Steel
Layouts	31 layouts holding from 1 size 12 contact to 85 size 23 contacts
Usage	Medical, Military, Commercial, and Industrial
Receptacle Mounting	Jam Nut, Square Flange, In-line, PCB

Electrical specifications for the connector

The MKJ series of products uses size 23 pin and socket contacts with equivalent electrical performance of size 22 contacts. These smaller contacts accept #22 - #28 AWG wire and allow the contact spacing to be reduced down to 0.076 inches. The connector's Fortron dielectric insulating material can accommodate from 3 to 85 contacts in various shell sizes. This high density packaging, along with a reduced wall thickness and scoop, allows a dramatic decrease in size and weight of the MKJ connector while retaining the approximate mechanical and electrical characteristics of heavier and larger Military Standard Environmental connectors. The connector is capable of operating between -55 degrees Celsius and +150 degrees Celsius and can be mated up to 2,000 cycles. Maximum electrical current is 5 Amps and maximum voltage at sea level is 500 VAC RMS.

Max. Voltage	Max. Current	Operating Temp	Durability
500 VAC RMS Sea Level	5 Amps Maximum	-55 degrees C to +150 degrees C	2,000 mated cycles

The MKJ0 is ideal for light duty applications where weight and cost take a precedence. The connector comes with 5 high density contact arrangements, multiple clocking positions, a banding platform, and rear grommets and pin interfacial seals. Used in avionics, aerospace, medical, and industrial applications.

Specifications

Contact Type	Rear crimp or PCB mount
Contacts	Size 23 (0.076" spacing), Size 16 (.177" spacing)
Wire Size	#22 - #28 AWG (Size 23 Contacts), #16 - #20 AWG (Size 16 Contacts)
Contact Rating	5 Amps Maximum
Voltage Rating	500 VAC RMS sea level
Insulation Resistance	5,000 Megaohms minimum
Operating Temperature	-55°C to +150°C
Contact Resistance	8 Milliohms maximum
Vibration	20 g's in accordance with MIL-STD-1344 Method 2005, Condition IV
Shock	50 g's in accordance with MIL-STD-1344 Method 2004, Condition E
Durability	2,000 mating cycles
Receptacle Mounting	Jam nut, PCB mount or Wall mount
EMI Shielding	40db attenuation, 100Mhz to 1000Mhz
Coupling	UN Threaded
Materials	Shells - Aluminum Alloy or Stainless Steel Insulators - Thermoplastic Seals - Fluorosilicone Contacts - Copper alloy with gold over nickel plating

The MKJ1 is a robust connector meeting MIL-DTL-38999 shock and vibration requirements. Plug connector comes with an anti-decoupling spring for vibration resistance. Ideal for harsh environments where a robust electrical connection is required under the most demanding shock and vibration conditions. Proven design for avionics, satellites, and missile systems.

High Vibration, Higher Temperature, Highest Sealing

ITT Interconnect Solutions has been always looking forward to satisfy their customers' needs. In order to meet these specific demands ITT ICS developed a new signal connector series for sensor applications (100V / 4A) in harsh environments. One such application is the engine compartments of both heavy diesel and gas units. ITT ICS's engineered for life design philosophy ensures that Metr1x connectors stay dry and fully functional in all situations. Engine oils, soot or even aggressive salt spray have no impact on the connector's performance or function. The connector provides EMI shielding as well as resistance against vibration of up to 20g and shock of up to 50g. In addition it is sealed to IP69K, can operate up to 150°C (+302°F) conforms to UL94-V0 and is RoHS compliant.

P0 - Piece parts, no contacts, no cable

Specifications

Contact Type	CGK crimp contacts, size 20
Wire Accomodation	0,22 - 0,75 mm ² (AWG 24-20)
Housing Material	Stainless Steel V2A
Cable Diameter	6 mm
Durability	50 mating cycles
Current Rating	4A
Voltage Rating	100V dc
Mating Face	Acc. DIN EN 61076-2-1001 / Type D
Locking Torque	1,5Nm to 2,1Nm
Insulation Resistance (acc. IEC 60512, Method 3a)	1 GΩ minimum / 500 V dc
Operating Temperature	-40°C to +150 °C (-40 °F to +302 °F)
Contact Resistance (acc. IEC 60512, Method 2a)	5 mΩ maximum
Vibration (acc. IEC 60512, Method 6e)	20g rms, 5Hz to 2 kHz
Shock (acc. IEC 60512, Method 6c)	50g, half-sine, 11 ms
EMI Shielding (acc. VG95328 / VG 95343)	50 dB minimum, 30 kHz – 100 MHz
Sealing Class	IP69K, IP68 (4m / 2 hours) in mated condition
Flammability Rating	UL94-V0
Salt Spray Resistance (acc. IEC 60512, Method 11f)	48 hours
Resistance against fluids	Engine oil, diesel, cooling liquid, kerosene, hydraulic oil

Metr1x Housing

Robust stainless steel housing is available in different versions for receptacle. Further housing variations on request.

For assembly and crimp tooling please consult factory.

MICRO-K microminiature circular connectors are rugged yet lightweight - and meet or exceed the applicable requirements of MIL-DTL-83513. Applications include biomedical, instrumentation and miniature black boxes.

MIK: Accommodate up to 55 contacts on .050 (1.27) centers (equivalent to 420 contacts per square inch). Five keyway polarization prevents cross plugging. The threaded coupling nuts provide strong, reliable coupling. MIK receptacles can be either front or back panel mounted; in back mounting applications, panel thickness of up to 3/32" can be used on the larger sizes. Maximum temperature range - 55°C to + 125°C.

Standard MIK connectors are available in two shell sizes accommodating two contact arrangements pre-wired to your specific requirements.

MIKM: Similar to our MIK, except has a steel shell and receptacle for improved ruggedness and RFI resistance. It accommodates up to 85 twist pin contacts. Maximum temperature range - 55°C to + 125°C.

MIKQ: A quick disconnect metal shell and receptacle version that can be instantaneously disconnected yet provides a solid lock when engaged. Applications include commercial TV cameras, portable

radios, military gun sights, airborne landing systems and medical equipment. Maximum temperature range - 55°C to +125°C.
