■ CHROMATICITY DIAGRAM CIE 1931

\*The chromaticity coordinates (x,y) of the SMD LEDs are in accordance with CIE 1931 chromaticity diagram.

\*The color temperature values used are based on the traditional incandescence lighting standard which cannot be exact applicable to LED lighting. It must be used only for reference purpose.

\*Measurement uncertainty of color coordinates:  $\pm 0.02$

**Note:** Products of different CIE bins may not use the same materials and thus may have minor differences in characteristic and business terms

■ **PACKING**

■ **CAUTIONS**

**1. Over voltage**

- A. Drive the product over the specified current/voltage rating per unit or per reel will damage the product.
- B. The product should not be used in reverse polarity.
- C. It is recommended to use a power supply with overload (over-voltage, short circuit and overheat) protection.

**2. Hand soldering**

- A. It is recommended to use a tip temperature of 280<sup>o</sup>C for less than 3 seconds (one times) with a soldering iron capacity of 30W, if hand soldering of the connecting wire is required.
- B. Be careful of the contaminations of hand soldering.

**3. Storage & Handling**

- A. Open the anti-electrostatic bag only a short time before use.
- B. LED is encapsulated with elastic resin and will be damaged with a external force applied on the top surface of the LED.
- C. The product should be storage in an environment with the relative humidity less than 90% RH (@30 degree C or less).
- D. During installation, excess mechanical stress will damage the product. The minimum bending radius of curvature is 5000mm. The maximum twist angle is 1 degree.
- E. The product is not waterproof. Excess moisture may also damage the product.
