

TPS22930 Ultra Small, Low On-Resistance Load Switch With Controlled Turn-on

1 Features

- Integrated Single Channel Load Switch
- Ultra Small Four Terminal Wafer-Chip-Scale Package (Nominal Dimensions Shown, See Addendum for Details)
 - 0.9 mm × 0.9 mm, 0.5 mm Pitch, 0.5 mm Height (YZV)
- Input Voltage Range: 1.4 V to 5.5 V
- Ultra Low R_{ON} Resistance
 - $R_{ON} = 35\text{ m}\Omega$ at $V_{IN} = 5\text{ V}$
 - $R_{ON} = 36\text{ m}\Omega$ at $V_{IN} = 3.6\text{ V}$
 - $R_{ON} = 49\text{ m}\Omega$ at $V_{IN} = 1.8\text{ V}$
- 2 A Maximum Continuous Switch Current
- Low Quiescent Current ($< 3\text{ }\mu\text{A}$)
- Low Control Input Threshold Enables Use of 1.2 V/1.8 V/2.5 V/3.3 V Logic
- Controlled Slew Rate
- Under Voltage Lockout
- Reverse Current Protection When Disabled

2 Applications

- Smartphone / Wireless Handsets
- Portable Industrial / Medical Equipment
- Portable Media Players
- Point of Sales Terminals
- GPS Navigation Devices
- Digital Cameras
- Portable Instrumentation

4 Simplified Schematic

3 Description

The TPS22930 is a small, low R_{ON} load switch with controlled turn on. The device contains a P-channel MOSFET that can operate over an input voltage range of 1.4 V to 5.5 V. The switch is controlled by an on/off input (ON), which is capable of interfacing directly with low-voltage control signals. The TPS22930 is active high enable.

The TPS22930 device provides circuit breaker functionality by disabling the body diode during reverse voltage (also known as reverse current) situations. Reverse current protection is active only when the power-switch is disabled (off). The device disengages the body diode when the output voltage (V_{OUT}) is driven higher than the input (V_{IN}) to stop the flow of current towards the input side of the switch. Additionally, under-voltage lockout (UVLO) protection turns the switch off if the input voltage is too low.

The slew rate of the device is internally controlled in order to avoid inrush current.

The TPS22930 is available in an ultra-small, space-saving 4-pin CSP package and is characterized for operation over the free-air temperature range of -40°C to 85°C .

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (MAX)
TPS22930	DSBGA (4)	0.92 mm × 0.92 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

5 Revision History

Changes from Revision A (June 2015) to Revision B	Page
• Made changes to Pin Configuration and Functions	1

Changes from Original (November 2012) to Revision A	Page
• Removed Ordering Information table	1
• Added ESD Ratings table, Feature Description section, Device Functional Modes, Application and Implementation section, Power Supply Recommendations section, Layout section, Device and Documentation Support section, and Mechanical, Packaging, and Orderable Information section.	1

6 Pin Configuration and Functions

Pin Assignments

A	VOUT	VIN
B	GND	ON
	1	2

Pin Functions

PIN		I/O	DESCRIPTION
NO.	NAME		
A1	VOUT	O	Switch output.
A2	VIN	I	Switch input. Input bypass capacitor recommended for minimizing V_{IN} dip during transients.
B1	GND	–	Device ground.
B2	ON	I	Switch control input, active high. Do not leave floating.

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾⁽²⁾

		MIN	MAX	UNIT
V_{IN}	Input voltage	–0.3	6	V
V_{OUT}	Output voltage	–0.3	6	V
V_{ON}	Input voltage	–0.3	6	V
I_{MAX}	Maximum continuous switch current		2	A
I_{PLS}	Maximum pulsed switch current, pulse ≤ 1 ms, 25% duty cycle		2.5	A
T_A	Operating free-air temperature ⁽³⁾	–40	85	°C
T_J	Maximum junction temperature		150	°C
T_{stg}	Storage temperature	–65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values are with respect to network ground terminal.
- (3) In applications where high power dissipation and/or poor package thermal resistance is present, the maximum ambient temperature may have to be derated. Maximum ambient temperature $[T_{A(max)}]$ is dependent on the maximum operating junction temperature $[T_{J(max)}]$, the maximum power dissipation of the device in the application $[P_{D(max)}]$, and the junction-to-ambient thermal resistance of the part/package in the application ($R_{\theta JA}$), as given by the following equation: $T_{A(max)} = T_{J(max)} - (R_{\theta JA} \times P_{D(max)})$

7.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000	V
	Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1000	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 500-V HBM is possible with the necessary precautions.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 250-V CDM is possible with the necessary precautions.

7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V_{IN}	Input voltage range	1.4	5.5	V
V_{ON}	ON voltage range	0	5.5	V
V_{OUT}	Output voltage range	0	V_{IN}	V
V_{IH}	High-level input voltage, ON	$V_{IN} = 3.61\text{ V to }5.5\text{ V}$		V
		$V_{IN} = 1.4\text{ V to }3.6\text{ V}$		
V_{IL}	Low-level input voltage, ON	$V_{IN} = 3.61\text{ V to }5.5\text{ V}$		V
		$V_{IN} = 1.4\text{ V to }3.6\text{ V}$		
C_{IN}	Input capacitor	1 ⁽¹⁾		μF

- (1) Refer to [Application Information](#) section.

7.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TPS22930	UNIT
		YZV (DSBGA)	
		4 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	189.1	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	1.9	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	36.8	°C/W
ψ_{JT}	Junction-to-top characterization parameter	11.3	°C/W
ψ_{JB}	Junction-to-board characterization parameter	36.8	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	–	°C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

7.5 Electrical Characteristics

Unless otherwise note, the specification in the following table applies over the operating ambient temperature $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$ (Full). Typical values are for $T_A = 25^{\circ}\text{C}$.

PARAMETER		TEST CONDITIONS	T_A	MIN	TYP	MAX	UNIT
POWER SUPPLIES AND CURRENTS							
I_{IN}	Quiescent current	$I_{OUT} = 0\text{ V}, V_{IN} = V_{ON} = 5.25\text{ V}$	Full		2.3	10	μA
		$I_{OUT} = 0\text{ V}, V_{IN} = V_{ON} = 4.2\text{ V}$			2.2	7	
		$I_{OUT} = 0\text{ V}, V_{IN} = V_{ON} = 3.6\text{ V}$			2.1	7	
		$I_{OUT} = 0\text{ V}, V_{IN} = V_{ON} = 2.5\text{ V}$			1.0	5	
		$I_{OUT} = 0\text{ V}, V_{IN} = V_{ON} = 1.5\text{ V}$			0.8	5	
$I_{IN(off)}$	Off supply current	$V_{OUT} = \text{Open}, V_{IN} = 5.25\text{ V}, V_{ON} = 0\text{ V}$	Full		0.3	10	μA

TEST CIRCUIT

t_{ON}/t_{OFF} WAVEFORMS

(A) Rise and fall times of the control signal are 100ns.

Figure 26. Test Circuit and t_{ON}/t_{OFF} Waveforms

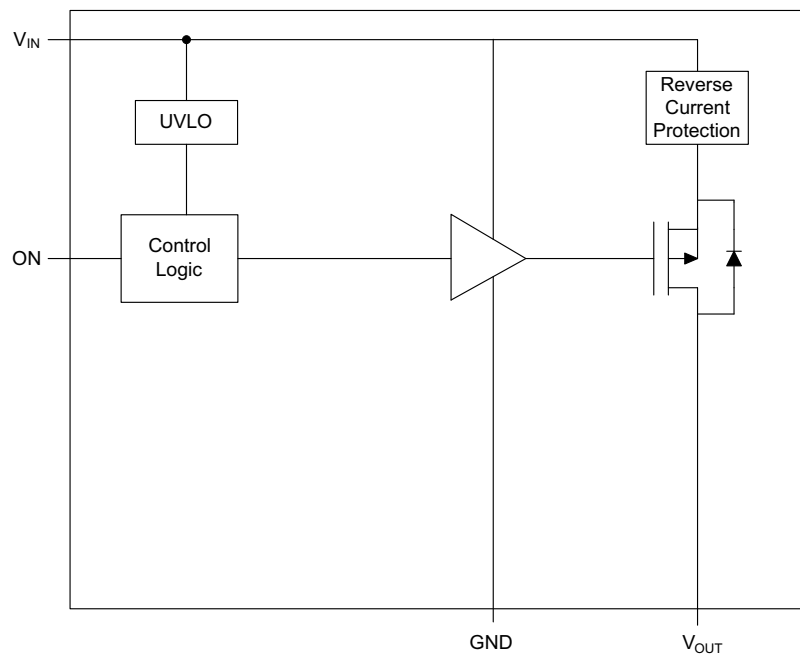

9 Detailed Description

9.1 Overview

The TPS22930 is a single channel, 2-A load switch in a 4-terminal BSGA package. A low enable threshold makes it capable of interfacing directly with low voltage control signals. In the off state, the device has very low leakage current during off state. This prevents downstream circuits from pulling high standby current from the supply. When turning on, the output will rise with a controlled slew rate to limit inrush current.

The device will also disengage the body diode when disabled to provide reverse current protection. The undervoltage lockout (UVLO) threshold will ensure the switch is turned off and will block reverse current if the V_{IN} power supply is removed

9.2 Functional Block Diagram

9.3 Feature Description

Table 1. Feature List

DEVICE	R_{ON} (TYP) AT 4.2 V	RISE TIME AT 4.2 V (TYP)	QUICK OUTPUT DISCHARGE ⁽¹⁾	MAXIMUM CONTINUOUS CURRENT	ENABLE
TPS22930A	35 m Ω	5.4 μ s	No	2 A	Active High

(1) This feature discharges output of the switch to GND through a resistor, preventing the output from floating when the pass FET is disabled

9.3.1 On And Off Control

The ON pins control the state of the switch. Asserting ON high enables the switch. ON is active high and has a low threshold, making it capable of interfacing with low-voltage signals. The ON pin is compatible with standard GPIO logic threshold. It can be used with any microcontroller with 1.2V or higher GPIO voltage.

9.3.2 UVLO

UVLO turns off the switch if the input voltage drops below the under voltage lockout threshold. With the ON pin active, the input voltage rising above the under voltage lockout threshold will allow a controlled turn-on of the switch to limit current over-shoot.

The maximum UVLO of the TPS22930A is 1.2 V. This is under the minimum V_{IN} voltage and meets the system UVLO requirements. Once the device is disabled through UVLO, it will block reverse current in the case a voltage is applied to V_{OUT}

9.3.3 Reverse Current Protection

Reverse current protection (RCP) is only active when ON is asserted low. When ON is asserted high, current can flow from V_{OUT} to V_{IN} or from V_{IN} to V_{OUT} . This allows the device to function as a bi-directional switch when enabled.

9.4 Device Functional Modes

[Table 2](#) describes the state of the switch and the reverse current protection as determined by the ON pin.

Table 2. Switch and Reverse Current Protection State

ON	V_{IN} to V_{Out}	RCP
H	On	Off
L	Off	On

10 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

10.1 Application Information

10.1.1 Input Capacitor (Optional)

To limit the voltage drop on the input supply caused by transient in-rush currents when the switch turns on into a discharged load capacitor or short-circuit, it is recommended that a capacitor be placed between VIN and GND. A 1- μ F ceramic capacitor, C_{IN} , placed close to the pins, is usually sufficient. Higher values of C_{IN} can be used to further reduce the voltage drop during high-current application. When switching heavy loads, it is recommended to have an input capacitor about 100 times higher than the output capacitor to avoid excessive voltage drop; however, a 100 to 1 ratio is not required for proper functionality of the device.

10.1.2 Output Capacitor (Optional)

Due to the integrated body diode in the PMOS switch, a C_{IN} greater than C_L is highly recommended. A C_L greater than C_{IN} can cause V_{OUT} to exceed V_{IN} when the system supply is removed. This could result in current flow through the body diode from V_{OUT} to V_{IN} . A C_{IN} to C_L ratio of 100 to 1 is recommended for minimizing V_{IN} dip caused by inrush currents during startup; however, a 100 to 1 ratio is not required for proper functionality of the device.

10.2 Typical Application

Figure 27. Typical Application Schematic

10.2.1 Design Requirements

For this design example, the following will be used as the system requirements.

Table 3. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
V_{IN} Range	1.5 V to 5.5 V
UVLO Threshold	< 1.5 V
Reverse Current Protection	Required
Load Current	1 A
Ambient Temperature	25 °C

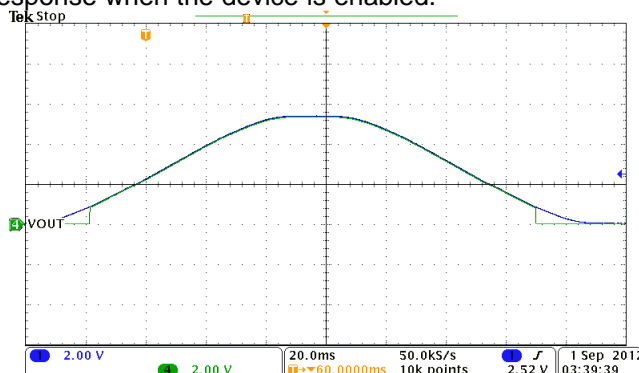

10.2.2 Detailed Design Procedure

To begin the design process, the designer needs to know the following:

- Input Voltage range
- UVLO Threshold
- Load Current
- Ambient Temperature

10.2.3 Application Curve

Figure 28 shows the UVLO response when the device is enabled.

ON = 5 V

Figure 28. UVLO Response

11 Power Supply Recommendations

The device is designed to operate from a VIN range of 1.5 V to 5.5 V. The power supply should be well regulated and placed as close to the device terminals as possible. It must be able to withstand all transient and load current steps. In most situations, using an input capacitance of 1 μ F is sufficient to prevent the supply voltage from dipping when the switch is turned on. In cases where the power supply is slow to respond to a large transient current or large load current step, additional bulk capacitance may be required on the input

12 Layout

12.1 Layout Guidelines

For best performance, all traces should be as short as possible. To be most effective, the input and output capacitors should be placed close to the device to minimize the effects that parasitic trace inductances may have on normal operation. Using wide traces for VIN, VOUT, and GND helps minimize the parasitic electrical effects along with minimizing the case to ambient thermal impedance. The ON pin cannot be left floating and must be driven either high or low for proper functionality.

Figure 29 shows an example of a layout.

12.2 Layout Example

Figure 29. Layout Recommendation

12.3 Thermal Considerations

The maximum IC junction temperature should be restricted to 125°C under normal operating conditions. To calculate the maximum allowable dissipation, $P_{D(max)}$ for a given output current and ambient temperature, use the following equation as a guideline:

$$P_{D(max)} = \frac{T_{J(max)} - T_A}{\theta_{JA}}$$

where

- $P_{D(max)}$ = maximum allowable power dissipation
- $T_{J(max)}$ = maximum allowable junction temperature (125°C for the TPS22930)
- T_A = ambient temperature of the device
- θ_{JA} = junction to air thermal impedance. See [Thermal Information](#) table. This parameter is highly dependent upon board layout. (1)

The power dissipated by the device depends on the R_{ON} of the device at a given V_{IN} . To calculate the amount of power being dissipated by the device, use the following equation:

$$P_{IR} = I^2 \times R_{ON}$$

where

- P_{IR} = power dissipated by the device
- I = load current in amperes
- R_{ON} = resistance of the device in Ohms at a given V_{IN} (see [Electrical Characteristics](#) table) (2)

The result from [Equation 2](#) should always be less than or equal to the result from [Equation 1](#).

This glossary lists and explains terms, acronyms, and definitions.

14 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TPS22930AYZVR	ACTIVE	DSBGA	YZV	4	3000	Green (RoHS & no Sb/Br)	SNAGCU	Level-1-260C-UNLIM	-40 to 85	3Q	Samples
TPS22930AYZVT	ACTIVE	DSBGA	YZV	4	250	Green (RoHS & no Sb/Br)	SNAGCU	Level-1-260C-UNLIM	-40 to 85	3Q	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
TPS22930AYZVR	DSBGA	YZV	4	3000	180.0	8.4	1.0	1.0	0.63	4.0	8.0	Q1
TPS22930AYZVT	DSBGA	YZV	4	250	180.0	8.4	1.0	1.0	0.63	4.0	8.0	Q1

TAPE AND REEL BOX DIMENSIONS

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
TPS22930AYZVR	DSBGA	YZV	4	3000	182.0	182.0	20.0
TPS22930AYZVT	DSBGA	YZV	4	250	182.0	182.0	20.0

YZV (S-XBGA-N4)

DIE-SIZE BALL GRID ARRAY

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - B. This drawing is subject to change without notice.
 - C. NanoFree™ package configuration.

NanoFree is a trademark of Texas Instruments.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
