

# Smart High-Side Power Switch for Industrial Applications

## 1 Channel: 1 x 200mΩ

### Features

- Short circuit protection
- Current limitation
- Overload protection
- Overvoltage protection (including load dump)
- Undervoltage shutdown with auto-restart and hysteresis
- Switching inductive loads
- Clamp of negative voltage at output with inductive loads
- CMOS compatible input
- Thermal shutdown with restart
- ESD - Protection
- Loss of GND and loss of  $V_{bb}$  protection
- Very low standby current
- Reverse battery protection with external resistor
- Improved electromagnetic compatibility (EMC)

### Product Summary

|                        |              |           |    |
|------------------------|--------------|-----------|----|
| Overvoltage protection | $V_{bb(AZ)}$ | 47        | V  |
| Operating voltage      | $V_{bb(on)}$ | 12...45   | V  |
| On-state resistance    | $R_{ON}$     | 200       | mΩ |
| Operating temperature  | $T_a$        | -30...+85 | °C |

**PG-TO252-5-1**

### Application

- All types of resistive, inductive and capacitive loads
- $\mu$ C compatible power switch for 12 V and 24 V DC industrial applications
- Replaces electromechanical relays and discrete circuits

### General Description

N channel vertical power FET with charge pump, ground referenced CMOS compatible input, monolithically integrated in Smart SIPMOS® technology.  
Providing embedded protective functions.

## Block Diagram

| Pin | Symbol | Function                                                       |
|-----|--------|----------------------------------------------------------------|
| 1   | OUT    | Output to the load                                             |
| 2   | NC     | not connected                                                  |
| 3   | Vbb    | connected with TAB                                             |
| 4   | GND    | Logic ground                                                   |
| 5   | IN     | Input, activates the power switch in case of logic high signal |
| TAB | Vbb    | Positive power supply voltage                                  |

## Maximum Ratings

| <b>Electrostatic discharge voltage</b> (Human Body Model)<br>according to ANSI EOS/ESD - S5.1 - 1993<br>ESD STM5.1 - 1998<br>Input pin<br>All other pins                                  | $V_{ESD}$      | $\pm 1$<br>$\pm 5$       | kV               |

<sup>1)</sup>defined by  $P_{tot}$

<sup>2)</sup>At  $V_{IN} > V_{bb}$ , the input current is not allowed to exceed  $\pm 5\text{ mA}$ .

<sup>3)</sup>defined by  $P_{tot}$

<sup>4)</sup>Device on 50mm\*50mm\*1.5mm epoxy PCB FR4 with 6 cm<sup>2</sup> (one layer, 70 $\mu\text{m}$  thick) copper area for  $V_{bb}$  connection. PCB is vertical without blown air.

<sup>5)</sup>not subject to production test, specified by design

<sup>6)</sup> $V_{Loaddump}$  is setup without the DUT connected to the generator per ISO 7637-1 and DIN 40839 .

Supply voltages higher than  $V_{bb(AZ)}$  require an external current limit for the GND pin, e.g. with a 150 $\Omega$  resistor in GND connection. A resistor for the protection of the input is integrated.

## Electrical Characteristics

| Parameter<br>at $T_j = -40...125\text{ }^{\circ}\text{C}$ , $V_{bb} = 15...30\text{ V}$ unless otherwise specified | Symbol | Values |      |      | Unit |
|--------------------------------------------------------------------------------------------------------------------|--------|--------|------|------|------|
|                                                                                                                    |        | min.   | typ. | max. |      |

<sup>1</sup>higher current due temperature sensor

<sup>2</sup>Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as "outside" normal operating range. Protection functions are not designed for continuous repetitive operation.

<sup>3</sup>see also  $V_{ON(CL)}$  in circuit diagram

<sup>4</sup> higher operating temperature at normal function available

## Electrical Characteristics

| Parameter<br>at $T_j = -40...125\text{ }^{\circ}\text{C}$ , $V_{bb} = 15...30\text{ V}$ unless otherwise specified | Symbol             | Values            |      |          | Unit             |

| Drain-source diode voltage ( $V_{OUT} > V_{bb}$ )<br>$I_F = 1\text{ A}$                                 | $-V_{ON}$ | - | 0.6 | 1.2       | V |

<sup>1)</sup>At  $V_{IN} > V_{bb}$ , the input current is not allowed to exceed  $\pm 5\text{ mA}$ .

<sup>2)</sup>not subject to production test, guaranteed by design

<sup>3)</sup>defined by  $P_{tot}$

## EMC-Characteristics

All EMC-Characteristics are based on limited number of samples and no part of production test.

### Test Conditions:

If not other specified the test circuitry is the minimal functional configuration without any external components for protection or filtering.

The test pulses are applied at  $V_{bb}$

## Definition of functional status

| Class | Content                                                                                                                                                                                                            |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| C     | All functions of the device are performed as designed after exposure to disturbance.                                                                                                                               |
| E     | One or more function of a device does not perform as designed after exposure and can not be returned to proper operation without repairing or replacing the device. The value after the character shows the limit. |

## Test circuit:

<sup>1</sup>Supply voltage  $V_{bb} = 12 V$  instead of 13,5 V.

## Conducted Emission

Acc. IEC 61967-4 (1 $\Omega$  / 150 $\Omega$  method)

### Typ. $V_{bb}$ -Pin Emission at DC-On with 150 $\Omega$ -matching network

### Typ. $V_{bb}$ -Pin Emission at PWM-Mode with 150 $\Omega$ -matching network

### Test circuit:

For defined decoupling and high reproducibility a defined choke (5 $\mu$ H at 1 MHz) is inserted between supply and  $V_{bb}$ -pin.

## Conducted Susceptibility

Acc. 47A/658/CD IEC 62132-4 (Direct Power Injection)

**Direct Power Injection:** Forward Power CW

**Failure criteria:** Amplitude and frequency deviation max. 10% at Out

### Typ. $V_{bb}$ -Pin Susceptibility at DC-On/Off

### Typ. $V_{bb}$ -Pin Susceptibility at PWM-Mode

### Test circuit:

For defined decoupling and high reproducibility the same choke and the same 150 Ω -matching network as for the emission measurement is used.

## Terms

## Inductive and overvoltage output clamp

$V_{ON}$  clamped to 47 V min.

## Input circuit (ESD protection)

The use of ESD zener diodes as voltage clamp at DC conditions is not recommended

## Overvoltage protection of logic part

$V_{Z2}=V_{bb(AZ)}=47V$  min.,  
 $R_I=3\text{ k}\Omega$  typ.,  $R_{GND}=150\Omega$

## Reverse battery protection

$R_{GND}=150\Omega$ ,  $R_I=3\text{ k}\Omega$  typ.,

Temperature protection is not active during inverse current

### GND disconnect

### GND disconnect with GND pull up

### V<sub>bb</sub> disconnect with charged inductive load

### Inductive Load switch-off energy dissipation

Energy stored in load inductance:  $E_L = \frac{1}{2} * L * I_L^2$

While demagnetizing load inductance, the energy dissipated in PROFET is  $E_{AS} = E_{bb} + E_L - E_R = V_{ON(CL)} * i_L(t) dt$ , with an approximate solution for  $R_L > 0\Omega$ :

$$E_{AS} = \frac{I_L * L}{2 * R_L} * (V_{bb} + |V_{OUT(CL)}|) * \ln\left(1 + \frac{I_L * R_L}{|V_{OUT(CL)}|}\right)$$

Typ. transient thermal impedance

$Z_{thJA}=f(t_p)$  @ 6cm<sup>2</sup> heatsink area

Parameter:  $D=t_p/T$

Typ. transient thermal impedance

$Z_{thJA}=f(t_p)$  @ min. footprint

Parameter:  $D=t_p/T$

Typ. on-state resistance

$R_{ON} = f(T_j)$ ;  $V_{bb} = 15$  V ;  $V_{in} = \text{high}$

Typ. on-state resistance

$R_{ON} = f(V_{bb})$ ;  $I_L = 0.5$  A ;  $V_{in} = \text{high}$

**Typ. turn on time**

$$t_{on} = f(T_j); R_L = 47\Omega$$

**Typ. turn off time**

$$t_{off} = f(T_j); R_L = 47\Omega$$

**Typ. slew rate on**

$$dV/dt_{on} = f(T_j); R_L = 47\Omega$$

**Typ. slew rate off**

$$dV/dt_{off} = f(T_j); R_L = 47\Omega$$

**Typ. initial peak short circuit current limit**

$$I_{L(SCp)} = f(T_j); V_{bb} = 20 \text{ V}; t_m = 150 \mu\text{s}$$

**Typ. initial short circuit shutdown time**

$$t_{off(SC)} = f(T_{j,start}); V_{bb} = 20 \text{ V}$$

**Typ. initial peak short circuit current limit**

$$I_{L(SCp)} = f(V_{bb}); t_m = 150 \mu\text{s}$$

**Typ. input current**

$$I_{IN(on/off)} = f(T_j); V_{bb} = 15 \text{ V}; V_{IN} = \text{low/high}$$

$$V_{INlow} \leq 1.8 \text{ V}; V_{INhigh} = 5 \text{ V}$$

### Typ. input current

$$I_{IN} = f(V_{IN}); V_{bb} = 15 \text{ V}$$

### Typ. input threshold voltage

$$V_{IN(th)} = f(T_j); V_{bb} = 15 \text{ V}$$

### Typ. input threshold voltage

$$V_{IN(th)} = f(V_{bb}); T_j = 25^\circ\text{C}$$

### Typ. standby current

$$I_{bb(off)} = f(T_j); V_{bb} = 32 \text{ V}; V_{IN} \leq 1,2 \text{ V}$$

**Maximum allowable inductive switch-off energy, single pulse**

$$E_{AS} = f(I_L); T_{jstart} = 125^{\circ}\text{C}$$

**Typ. leakage current**

$$I_{L(off)} = f(T_j); V_{bb} = 32\text{V}; V_{IN} \leq 1,2\text{ V}$$

**Typ. input delay time at switch on  $V_{bb}$**

$$t_d(V_{bbon}) = f(V_{bb})$$

## Timing diagrams

**Figure 1a:** V<sub>bb</sub> turn on:

**Figure 2b:** Switching a lamp

**Figure 2a:** Switching a resistive load, turn-on/off time and slew rate definition

**Figure 2c:** Switching an inductive load

**Figure 3a:** Turn on into short circuit, shut down by overtemperature, restart by cooling

Heating up of the chip may require several milliseconds, depending on external conditions.

**Figure 3b:** Short circuit in on-state shut down by overtemperature, restart by cooling

**Figure 4:** Overtemperature:  
Reset if  $T_j < T_{jt}$

**Figure 5:** Undervoltage shutdown and restart
