All the optical measurement shall be executed 30 minutes after backlight being turn-on. The optical characteristics shall be measured in dark room (ambient illumination on panel surface less than 1 Lux). The measuring configuration shows as following figure.

Photometer (TOPCON BM-5A or BM-7 fast)

500 mm +/- 50 mm

Field = 1°

TFT-LCD module

Optical characteristics measuring configuration

Note 9-1 : CR = $\dfrac{\text{Luminance when LCD is White}}{\text{Luminance when LCD is Black}}$
Contrast Ratio is measured in optimum common electrode voltage.

Note 9-2 : Topcon BM-7(fast) luminance meter 1° field of view is used in the testing immediately when

the display is powered on (after warm-up, brightness can decrease by up to 5%).

Note 9-3 : The definitions of viewing angle diagrams :
Note 9-4 : Definition of Response Time T_r and T_f:

Note 9-5 : Cross Talk (CTK) = $\dfrac{|YA\text{-}YB|}{YA} \times 100\%$

        YA : Brightness of Pattern A

        YB : Brightness of Pattern B

Pattern A   Pattern B

(Gray Level 31)   (Gray Level 31, central black box exclusive)

✕: Testing Point (A and B are at the same point.)   Black (Gray Level 0)

Note 9-6 : The uniformity of LCD is defined as

$$U = \dfrac{\text{The Minimum Brightness of the 9 testing Points}}{\text{The Maximum Brightness of the 9 testing Points}}$$

Luminance meter : BM-5A or BM-7 fast(TOPCON)
Measurement distance : 500 mm +/- 50 mm
Ambient illumination : < 1 Lux
Measuring direction : Perpendicular to the surface of module

The test pattern is white (Gray Level 63).
10. Handling Cautions
    10-1) Mounting of module
        a) Please power off the module when you connect the input/output connector.
        b) Please connect the ground pattern of the inverter circuit surely. If the connection
           is not perfect, some following problems may happen possibly.
          1.The noise from the backlight unit will increase.
          2.The output from inverter circuit will be unstable.
          3.In some cases a part of module will heat.
        c) Polarizer which is made of soft material and susceptible to flaw must be
          handled carefully.
        d) Protective film (Laminator) is applied on surface to protect it against scratches
          and dirts. It is recommended to peel off the laminator before use and taking
          care of static electricity.
    10-2) Precautions in mounting
        a) When metal part of the TFT-LCD module (shielding lid and rear case) is soiled,
          wipe it with soft dry cloth.
        b) Wipe off water drops or finger grease immediately. Long contact with water may
          cause discoloration or spots.
        c) TFT-LCD module uses glass which breaks or cracks easily if dropped or bumped
          on hard surface. Please handle with care.
        d) Since CMOS LSI is used in the module. So take care of static electricity and
          earth yourself when handling.
    10-3) Adjusting module
        a) Adjusting volumes on the rear face of the module have been set optimally before
          shipment.
        b) Therefore, do not change any adjusted values. If adjusted values are changed,
          the specifications described may not be satisfied.
    10-4) Others
        a) Do not expose the module to direct sunlight or intensive ultraviolet rays for many
          hours.
        b) Store the module at a room temperature place.
        c) The voltage of beginning electric discharge may over the normal voltage because
          of leakage current from approach conductor by to draw lump read lead line
          around.
        d) If LCD panel breaks, it is possibly that the liquid crystal escapes from the panel.
          Avoid putting it into eyes or mouth. When liquid crystal sticks on hands, clothes
          or feet. Wash it out immediately with soap.
        e) Observe all other precautionary requirements in handling general electronic
          components.
        f) Please adjust the voltage of common electrode as material of attachment by 1
          module.
   g) The UL number for PCB is EE2956.
