

SN74LVC2G14

SCES2000 - APRIL 1999-REVISED AUGUST 2015

# SN74LVC2G14 Dual Schmitt-Trigger Inverter

### **Features**

- Available in the TI NanoFree™ Package
- Supports 5-V V<sub>CC</sub> Operation
- Inputs Accept Voltages to 5.5 V
- Max  $t_{pd}$  of 5.4 ns at 3.3 V
- Low-Power Consumption, 10-µA Maximum I<sub>CC</sub>
- ±24-mA Output Drive at 3.3 V
- Typical V<sub>OLP</sub> (Output Ground Bounce) <0.8 V at  $V_{CC} = 3.3 \text{ V}$ ,  $T_A = 25^{\circ}\text{C}$
- Typical V<sub>OHV</sub> (Output V<sub>OH</sub> Undershoot) >2 V at V<sub>CC</sub> = 3.3 V, T<sub>A</sub> = 25°C
- Ioff Supports Live Insertion, Partial-Power-Down Mode, and Back-Drive Protection
- Support Translation Down (5 V to 3.3 V; 3.3 V to 1.8 V)
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II

### Applications

- **Body Control Modules**
- **Engine Control Modules**
- Arcade, Casino, and Gambling Machines
- Servers and High-Performance Computing
- EPOS, ECR, and Cash Drawer
- Routers
- Desktop PC

### 3 Description

This dual Schmitt-trigger inverter is designed for 1.65-V to 5.5-V  $V_{CC}$  operation.

NanoFree™ package technology is a major breakthrough in IC packaging concepts, using the die as the package.

The SN74LVC2G14 device contains two inverters and performs the Boolean function  $Y = \overline{A}$ . The device functions as two independent inverters, but because of Schmitt action, it may have different input threshold levels for positive-going (V<sub>T+</sub>) and negative-going (V<sub>T</sub>\_) signals.

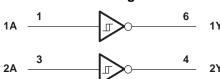

This device is fully specified for partial-power-down applications using  $I_{\text{off}}$ . The  $I_{\text{off}}$  circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

#### Device Information<sup>(1)</sup>

| PART NUMBER    | PACKAGE    | BODY SIZE (NOM)   |
|----------------|------------|-------------------|
| SN74LVC2G14DBV | SOT-23 (6) | 2.90 mm × 1.60 mm |
| SN74LVC2G14DCK | SC70 (6)   | 2.00 mm x 1.25 mm |
| SN74LVC2G14YZP | DSBGA (6)  | 1.41 mm × 0.91 mm |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

<sup>(1)</sup> Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 6.2 ESD Ratings

|                    |                         |  | VALUE | UNIT |
|--------------------|-------------------------|--|-------|------|
|                    |                         | Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 (1)                         | ±2000 |      |
| V <sub>(ESD)</sub> | Electrostatic discharge | Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup> | ±1000 | V    |

<sup>(1)</sup> JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 500-V HBM is possible with the necessary precautions. Pins listed as ±XXX V may actually have higher performance.

## 6.3 Recommended Operating Conditions

| V <sub>CC</sub> | Supply voltage                 | Data retention only      | 1.5  |                 | V    |  |
| VI              | Input voltage                  |                          | 0    | 5.5             | V    |  |
| Vo              | Output voltage                 |                          | 0    | V <sub>CC</sub> | V    |  |
|                 |                                | V <sub>CC</sub> = 1.65 V |      | -4              |      |  |
|                 |                                | V <sub>CC</sub> = 2.3 V  |      | -8              |      |  |
| I <sub>OH</sub> |                                | .,                       |      | -16             | mA   |  |
|                 |                                | $V_{CC} = 3 V$           |      | -24             |      |  |
|                 |                                | V <sub>CC</sub> = 4.5 V  |      | -32             |      |  |
|                 |                                | V <sub>CC</sub> = 1.65 V |      | 4               |      |  |
|                 |                                | V <sub>CC</sub> = 2.3 V  |      | 8               |      |  |
| I <sub>OL</sub> | Low-level output current       | .,                       |      | 16              | mA   |  |
|                 |                                | $V_{CC} = 3 V$           |      | 24              |      |  |
|                 |                                | V <sub>CC</sub> = 4.5 V  |      | 32              |      |  |
| T <sub>A</sub>  | Operating free-air temperature |                          | -40  | 125             | °C   |  |

All unused inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. Refer to the TI application report, Implications of Slow or Floating CMOS Inputs, SCBA004.

<sup>(2)</sup> The input negative-voltage and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

<sup>(3)</sup> The value of V<sub>CC</sub> is provided in the Recommended Operating Conditions table.

<sup>(2)</sup> JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 250-V CDM is possible with the necessary precautions. Pins listed as ±YYY V may actually have higher performance.

NOTES: A. C<sub>L</sub> includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  10 MHz,  $Z_{\circ}$  = 50  $\Omega$ .
- D. The outputs are measured one at a time, with one transition per measurement.
- E.  $t_{\mbox{\tiny PLZ}}$  and  $t_{\mbox{\tiny PHZ}}$  are the same as  $t_{\mbox{\tiny dis}}.$
- F.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
- G.  $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$ .
- H. All parameters and waveforms are not applicable to all devices.

Figure 3. Load Circuit and Voltage Waveforms

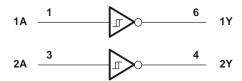

### 8 Detailed Description

#### 8.1 Overview

The SN74LVC2G14 device contains two Schmitt Trigger Inverter and performs the Boolean function  $Y = \overline{A}$ . The device functions as an independent inverter, but because of Schmitt Trigger action, it will have different input threshold levels for a positive-going ( $V_{t_*}$ ) and negative-going ( $V_{t_*}$ ) signals.

This device is fully specified for partial-power-down applications using  $I_{off}$ . The  $I_{off}$  circuit disables the output, preventing damaging current back-flow through the device when it is powered down.

### 8.2 Functional Block Diagram

### 8.3 Feature Description

### 8.3.1 Support Translation Down (5 V to 3.3 V; 3.3 V to 1.8 V)

As the inputs are 5.5-V tolerant, the device can be used as a down translator. When the input voltage exceeds  $V_{T+\ (Max)}$ , the output will follow  $V_{CC}$ , performing down-translation if the input voltage exceeds  $V_{CC}$ .

#### 8.4 Device Functional Modes

Table 1 lists the functional modes of the SN74LVC2G14.

Table 1. Functional Table (Each Inverter)

| INPUT<br>A | OUTPUT<br>Y |
|------------|-------------|
| Н          | L           |
| L          | Н           |

# 9 Application and Implementation

#### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The SN74LVC2G14 device is a high-drive CMOS device that can be used for a multitude of buffer type functions where the input is slow or noisy. The device can produce 24 mA of drive current at 3.3 V, making it Ideal for driving multiple outputs and good for high-speed applications up to 100 MHz. The inputs are 5.5-V tolerant allowing it to translate down to  $V_{\rm CC}$ .

### 9.2 Typical Application

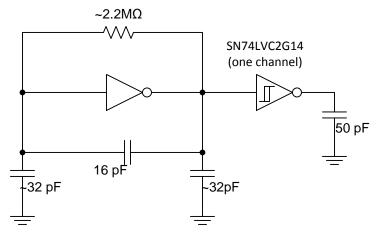

Figure 4. Typical Application Schematic

#### 9.2.1 Design Requirements

This device uses CMOS technology and has balanced output drive. Care should be taken to avoid bus contention because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads so routing and load conditions should be considered to prevent ringing.

#### 9.2.2 Detailed Design Procedure

- Recommended Input Conditions
  - Rise time and fall time specs. See (Δt/ΔV) in the Recommended Operating Conditions table.
  - Specified high and low levels. See (V<sub>IH</sub> and V<sub>IL</sub>) in the Recommended Operating Conditions table.
  - Inputs are overvoltage tolerant allowing them to go as high as (V<sub>I</sub> max) in the Recommended Operating
     Conditions table at any valid V<sub>CC</sub>.

#### 2. Recommend Output Conditions

Load currents should not exceed (I<sub>O</sub> max) per output and should not exceed (continuous current through V<sub>CC</sub> or GND) total current for the part. These limits are located in the *Absolute Maximum Ratings* table.

Product Folder Links: SN74LVC2G14

Outputs should not be pulled above V<sub>CC</sub>.

# **Typical Application (continued)**

### 9.2.3 Application Curve

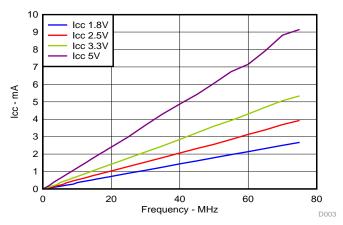

Figure 5. ICC vs Frequency

# 10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the table. Each  $V_{CC}$  pin should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, TI recommends a 0.1- $\mu$ F capacitor. If there are multiple  $V_{CC}$  pins, then TI recommends a 0.01- $\mu$ F or 0.022- $\mu$ F capacitor for each power pin. It is ok to parallel multiple bypass capacitors to reject different frequencies of noise. 0.1- $\mu$ F and 1- $\mu$ F capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power pin as possible for best results.

### 11 Layout

#### 11.1 Layout Guidelines

When using multiple bit logic devices inputs should not ever float. In many cases, functions or parts of functions of digital logic devices are unused, for example, when only two inputs of a triple-input AND gate are used or only 3 of the 4 buffer gates are used. Such input terminals should not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. The following rules must be observed under all circumstances:

- All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating.
- The logic level that should be applied to any particular unused input depends on the function of the device.
   Generally they will be tied to GND or V<sub>CC</sub> whichever make more sense or is more convenient.

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

<sup>(2)</sup> RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

10-Dec-2020

- (3) MSL, Peak Temp. The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

#### OTHER QUALIFIED VERSIONS OF SN74LVC2G14:

Automotive: SN74LVC2G14-Q1

NOTE: Qualified Version Definitions:

Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects

### NOTES:

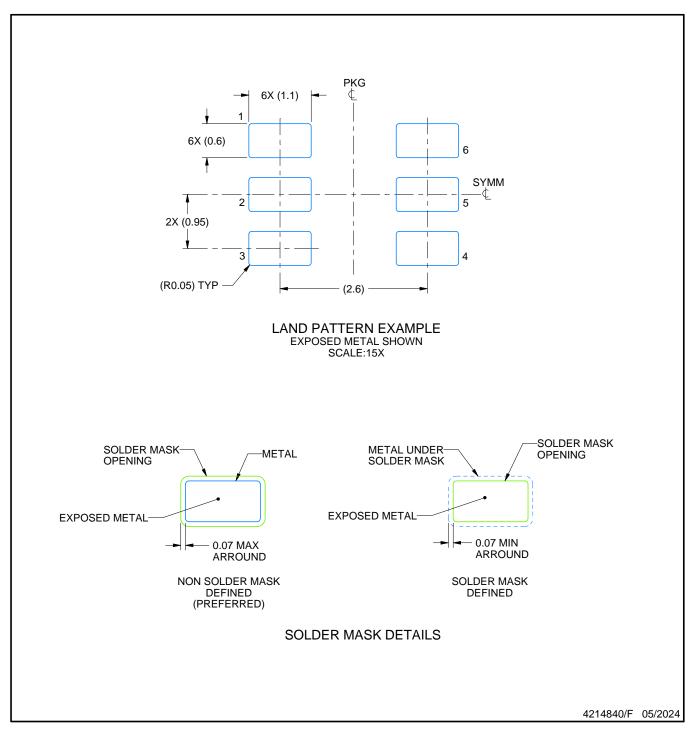

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

  2. This drawing is subject to change without notice.

  3. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.25 per side.

- 4. Leads 1,2,3 may be wider than leads 4,5,6 for package orientation.
- 5. Refernce JEDEC MO-178.

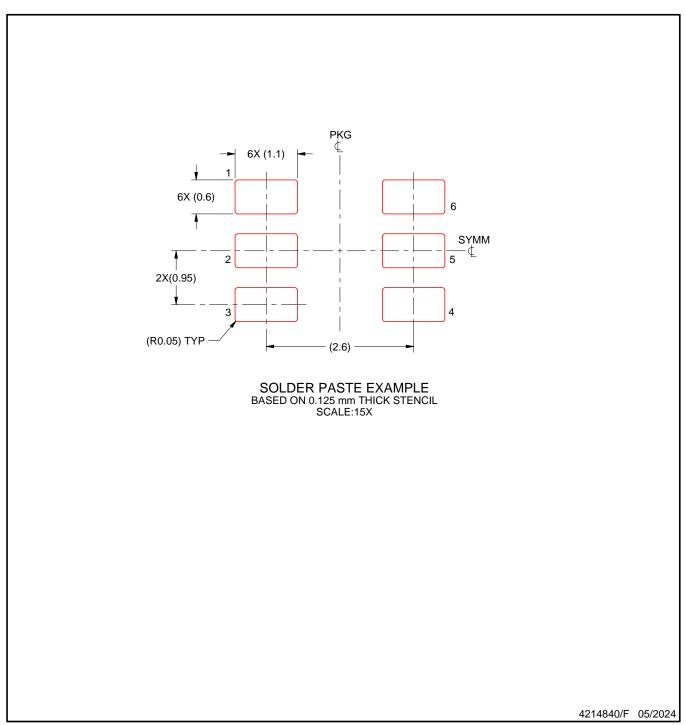

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

NOTES: (continued)

- 8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 9. Board assembly site may have different recommendations for stencil design.

DIE SIZE BALL GRID ARRAY

#### NOTES:

NanoFree Is a trademark of Texas Instruments.

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

  2. This drawing is subject to change without notice.
- 3. NanoFree<sup>™</sup> package configuration.

DIE SIZE BALL GRID ARRAY

NOTES: (continued)

Final dimensions may vary due to manufacturing tolerance considerations and also routing constraints.
 For more information, see Texas Instruments literature number SBVA017 (www.ti.com/lit/sbva017).

DIE SIZE BALL GRID ARRAY

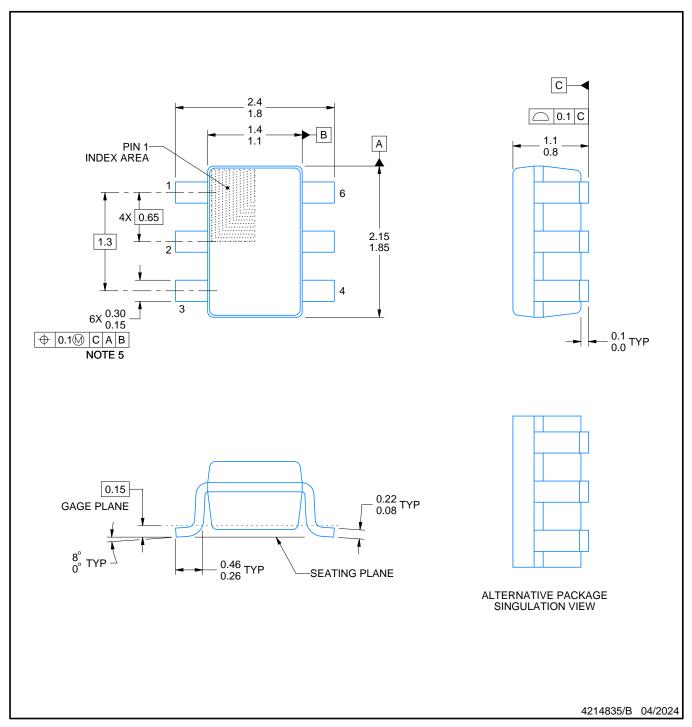

NOTES: (continued)

5. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release.

### NOTES:

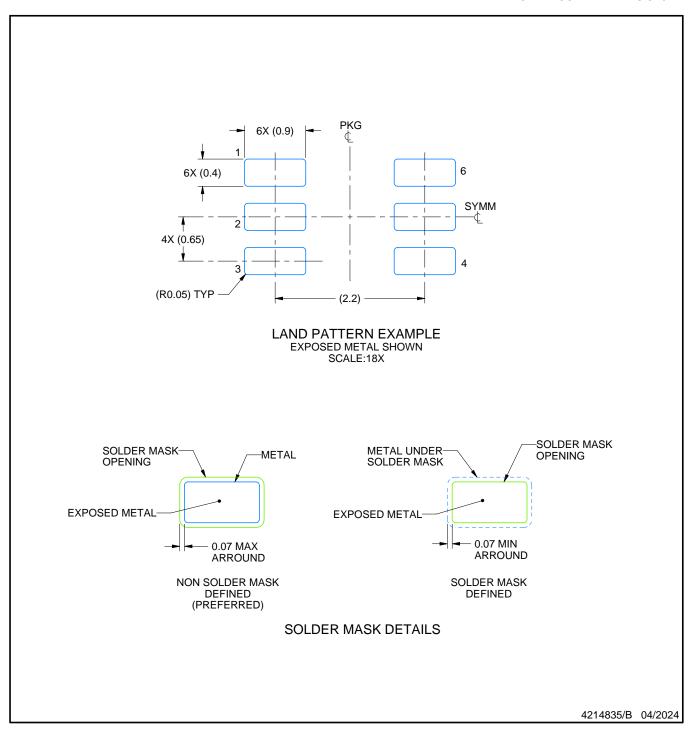

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

  2. This drawing is subject to change without notice.

  3. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.

  4. Falls within JEDEC MO-203 variation AB.

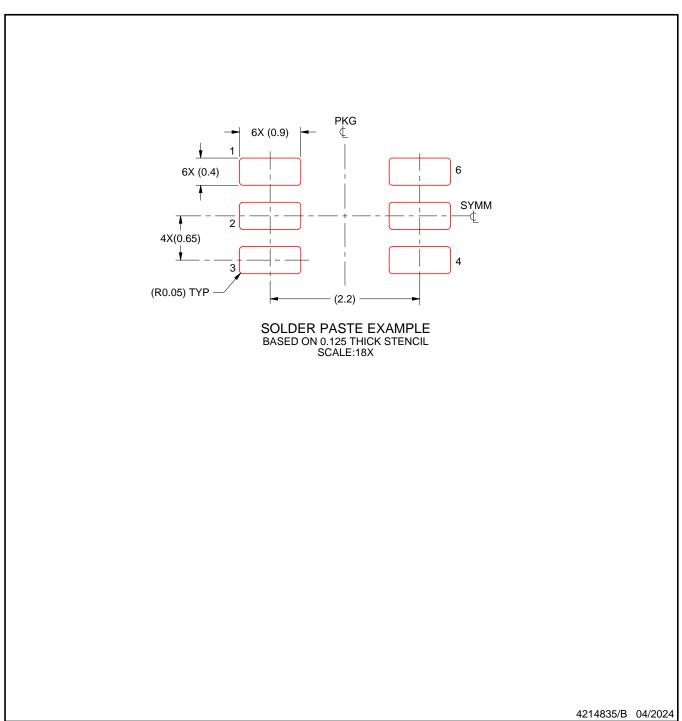

NOTES: (continued)

5. Publication IPC-7351 may have alternate designs.

6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

NOTES: (continued)

- 7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 8. Board assembly site may have different recommendations for stencil design.
