## Description

AZ5515-02F is a design which includes two uni-directional ESD rated clamping cells to protect high-speed data interfaces. The AZ5515-02F has been specifically designed to protect sensitive components which are connected to data and transmission lines from over-voltage caused by Electrostatic Discharging (ESD), Electrical Fast Transients (EFT), Lightning, and Cable Discharge Event (CDE).

AZ5515-02F is a unique design which includes proprietary clamping cells in a small package. During transient conditions, the proprietary clamping cells prevent over-voltage on the control/data/power lines, protecting any downstream components.

AZ5515-02F may be used to meet the ESD immunity requirements of IEC 61000-4-2, Level 4 ( $\pm 15\text{kV}$  air,  $\pm 8\text{kV}$  contact discharge).

## Typical Characteristics

## Applications Information

### A. Device Connection

The AZ5515-02F is designed to protect two data lines from transient over-voltage (such as ESD stress pulse). The device connection of AZ5515-02F is shown in the Fig. 1. In Fig. 1, the two protected data lines are connected to the ESD protection pins (pin1, pin2) of AZ5515-02F. The ground pin (pin3) of AZ5515-02F is a

negative reference pin. This pin should be directly connected to the GND rail of PCB (Printed Circuit Board). To get minimum parasitic inductance, the path length should keep as short as possible.

AZ5515-02F can provide protection for 2 I/O signal lines simultaneously. If the number of I/O signal lines is less than 2, the unused I/O pin can be simply left as NC pin.
