

# 3.3GHz to 3.9GHz Wireless Broadband RF Transceiver

MAX2838

## General Description

The MAX2838 direct-conversion, zero-IF, RF transceiver is designed specifically for 3.3GHz to 3.9GHz wireless broadband systems. The MAX2838 completely integrates all circuitry required to implement the RF transceiver function, providing RF-to-baseband receive path, baseband-to-RF transmit path, VCO, frequency synthesizer, and baseband/control interface. The device includes a fast-settling sigma-delta RF synthesizer with smaller than 29Hz frequency steps. The MAX2838 supports 2Tx, 2Rx MIMO applications with a master device providing coherent LO to the slave device. The transceiver IC also integrates circuits for on-chip DC-offset cancellation, I/Q error, and carrier-leakage detection circuits. Only an RF bandpass filter (BPF), TCXO, RF switch, PA, and a small number of passive components are needed to form a complete wireless broadband RF radio solution.

The MAX2838 completely eliminates the need for an external SAW filter by implementing on-chip monolithic filters for both the receiver and transmitter. The baseband filters along with the Rx and Tx signal paths are optimized to meet the stringent noise figure and linearity specifications. The device supports up to 2048-FFT OFDM and implements programmable channel filters for 1.5MHz to 28MHz RF channel bandwidths. The transceiver requires only 2 $\mu$ s Tx-Rx switching time. The IC is available in a small 48-pin thin QFN package measuring only 6mm x 6mm x 0.8mm.

## Applications

802.16-2004/802.16d Fixed WiMAX™  
802.16e MIMO Mobile WiMAX  
WiMAX Pico and Femto Basestations  
NLOS Wireless Broadband Systems

WiMAX is a trademark of the WiMAX Forum.  
SPI is a trademark of Motorola, Inc.

## Ordering Information

PART	TEMP RANGE	PIN-PACKAGE
MAX2838ETM+T	-40°C to +85°C	48 TQFN-EP*

\*EP = Exposed paddle.

+Denotes a lead-free package.

T = Tape and reel.

## Features

- ◆ 3.3GHz to 3.9GHz Wide-Band Operation
- ◆ Master-Slave Modes with Coherent LO for MIMO
- ◆ Complete RF Transceiver, and PA Driver
  - 0dBm Linear OFDM Transmit Power
  - 70dB Tx Spectral Emission Mask
  - 2.8dB Rx Noise Figure
  - Tx/Rx I/Q Error and LO Leakage Detection and Adjustment
  - Automatic Rx DC Offset Correction
  - Monolithic Low-Noise VCO with -39dBc Integrated Phase Noise
  - Programmable Rx I/Q Lowpass Channel Filters
  - Programmable Tx I/Q Lowpass Anti-Aliasing Filter
  - Sigma-Delta Fractional-N PLL with 29Hz Step Size
  - 60dB Tx Gain Control Range with 1dB Step Size, Digitally Controlled
  - 94dB Rx Gain Control Range with 2dB Step Size, Digitally Controlled
  - 60dB Analog RSSI Instantaneous Dynamic Range
  - 4-Wire SPI™ Digital Interface
  - I/Q Analog Baseband Interface
  - Digital Tx/Rx/Shutdown Mode Control
  - Low-Power CLOCKOUT Mode
  - On-Chip Digital Temperature Sensor Readout
- ◆ +2.7V to +3.6V Transceiver Supply
- ◆ Low-Power Shutdown Mode
- ◆ Small 48-Pin Thin QFN Package (6mm x 6mm x 0.8mm)

## Pin Configuration

# 3.3GHz to 3.9GHz Wireless Broadband RF Transceiver

## ABSOLUTE MAXIMUM RATINGS

V <sub>CC_</sub> Pins to GND	-0.3V to +3.6V
RF Inputs: RXRF+, RXRF-, EXTVCO+, EXTVCO- to GND	-0.3V to +3.6V
RF Outputs: TXRF+, TXRF-, EXTVCO+, EXTVCO- to GND	-0.3V to +3.6V
Analog Inputs: TXBBI+, TXBBI-, TXBBQ+, TXBBQ-, REFCLK to GND	-0.3V to +3.6V
Analog Outputs: RXBBI+, RXBBI-, RXBBQ+, RXBBQ-, RSSI, VCOBYP, CPOUT+, CPOUT-, PABIAS to GND	-0.3V to +3.6V
Digital Inputs: ENABLE, RXTX, $\overline{CS}$ , SCLK, DIN, RXHP B1-B7 to GND	-0.3V to +3.6V
Digital Outputs: DOUT, CLKOUT to GND	-0.3V to +3.6V

Short-Circuit Duration	
Analog Outputs: RXBBI+, RXBBI-, RXBBQ+, RSSI, VCOBYP, RXBBQ-, CPOUT+, CPOUT-, PABIAS, TXRF-, TXRF+	10s
Digital Outputs: DOUT, CLKOUT	10s
RF Input Power: RXRF+, RXRF-	+15dBm
RF Output Differential Load VSWR: TXRF+, TXRF-	6:1
Continuous Power Dissipation (T <sub>A</sub> = +70°C) 48-Pin Thin QFN (derate 37mW/°C above +70°C)	> 2.96W
Operating Temperature Range	-40°C to +85°C
Junction Temperature	+150°C
Storage Temperature Range	-65°C to +160°C
Lead Temperature (soldering, 10s)	+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

**CAUTION!** ESD SENSITIVE DEVICE

## DC ELECTRICAL CHARACTERISTICS

(MAX2838 Evaluation Kit, V<sub>CC\_</sub> = 2.7V to 3.6V, T<sub>A</sub> = -40°C to +85°C, ENABLE and RXTX set according to operating mode,  $\overline{CS}$  = high, SCLK = DIN = low, transmitter and receiver in maximum gain, no input signal at RF inputs, all RF inputs and outputs terminated into 50Ω, receiver baseband outputs are open. 90mV<sub>RMS</sub> differential I and Q signals (1MHz) applied to I and Q baseband inputs of transmitter in transmit mode, all registers set to recommended settings and corresponding test mode, unless otherwise noted. Typical values are at V<sub>CC</sub> = 2.8V, f<sub>LO</sub> = 3.6GHz, and T<sub>A</sub> = +25°C, unless otherwise noted.) (Note 1)

Last Rising Edge of SCLK to Rising Edge of $\overline{CS}$ or Clock to Load Enable Setup Time	$t_{CSH}$			6		ns
$\overline{CS}$ High Pulse Width	$t_{CSW}$			20		ns
Time Between Rising Edge of $\overline{CS}$ and the Next Rising Edge of SCLK	$t_{CS1}$			6		ns
Clock Frequency	$f_{CLK}$				45	MHz
Rise Time	$t_R$			$f_{CLK} / 10$		ns
Fall Time	$t_F$			$f_{CLK} / 10$		ns
SCLK Falling Edge to Valid DOUT	$t_D$			12.5		ns

**Note 1:** Min and max limits are guaranteed by test above  $T_A = +25^\circ C$  and are guaranteed by design and characterization at  $T_A = -40^\circ C$ . The power-on register settings are not guaranteed. Recommended register setting must be loaded after  $V_{CC}$  is supplied.

**Note 2:** Two tones at +20MHz and +39MHz offset with -35dBm/tone. Measure IM3 at 1MHz.

**Note 3:** Gain adjusted over max gain and max gain - 3dB.

**Note 4:**  $V_{CC}$  rise time (0V to 2.7V) must be less than 1ms.

## Pin Description

**MAX2838**

PIN	NAME	FUNCTION
1	VCCRXLNA	LNA Supply Voltage. Bypass with a capacitor as close as possible to the pin.
2	GNDRXLNA	LNA Ground
3	B5	Receiver and Transmitter Gain-Control Logic Input Bit 5
4	RXRF+	LNA Differential Inputs. Inputs are internally DC-coupled. Two external series capacitors and one shunt inductor match the inputs to 100Ω differential.
5	RXRF-	
6	B4	Receiver and Transmitter Gain-Control Logic Input Bit 4
7	VCCTXPAD	Supply Voltage for Power-Amplifier Driver. Bypass with a capacitor as close as possible to the pin.
8	B3	Receiver and Transmitter Gain-Control Logic Input Bit 3
9	B2	Receiver and Transmitter Gain-Control Logic Input Bit 2
10	TXRF+	Power-Amplifier Driver Differential Output. Outputs are internally DC-coupled. Two external series capacitors and one shunt inductor match the outputs to 100Ω differential.
11	TXRF-	
12	B1	Receiver and Transmitter Gain-Control Logic Input Bit 1
13	PABIAS	Transmit PA Bias DAC Output
14	VCCTXMX	Transmitter Upconverter Supply Voltage. Bypass with a capacitor as close as possible to the pin.
15	$\overline{CS}$	Chip-Select Logic Input of 4-Wire Serial Interface (See Figure 1)
16	SCLK	Serial-Clock Logic Input of 4-Wire Serial Interface (See Figure 1)
17	CLKOUT	Reference Clock Divided Output
18	VCCDIG	Digital Circuit Supply Voltage. Bypass with a capacitor as close as possible to the pin.
19	REFCLK	Reference Clock Input
20	VCCCP	PLL Charge-Pump Supply Voltage. Bypass with a capacitor as close as possible to the pin.
21	GNDCP	Charge-Pump Circuit Ground
22	CPOUT+	Differential Charge-Pump Output. Connect the frequency synthesizer's loop filter between CPOUT+ and CPOUT- (see the <i>Typical Operating Circuit</i> ).
23	CPOUT-	
24	GNDVCO	VCO Ground
25	VCOBYP	On-Chip VCO Regulator Output Bypass. Bypass with a 1μF capacitor to GND. Do not connect other circuitry to this point.
26	VCCVCO	VCO Supply Voltage. Bypass with a capacitor as close as possible to the pin.
27	VCCLO	LO Generation Supply Voltage. Bypass with a capacitor as close as possible to the pin.
28	EXTVCO-	External VCO Differential Input or Output. Input for slave configuration and output for master configuration. Leave unconnected for single configuration.
29	EXTVCO+	
30	DOUT	Data Logic Output of 4-Wire Serial Interface (See Figure 1)
31	DIN	Data Logic Input of 4-Wire Serial Interface (See Figure 1)
32	RSSI	RSSI or Temperature Sensor Multiplexed Analog Output
33	B7	Receiver Gain-Control Logic Input Bit 7
34	B6	Receiver and Transmitter Gain-Control Logic Input Bit 6
35	RXBBQ-	Receiver Baseband Q-Channel Differential Outputs. In Tx calibration mode, these pins are the LO leakage and sideband detector outputs.
36	RXBBQ+	
37	RXBBI-	Receiver Baseband I-Channel Differential Outputs. In Tx calibration mode, these pins are the LO leakage and sideband detector outputs.
38	RXBBI+	
39	VCCR XVGA	Receiver VGA Supply Voltage. Bypass with a capacitor as close as possible to the pin.

# 3.3GHz to 3.9GHz Wireless Broadband RF Transceiver

## Pin Description (continued)

PIN	NAME	FUNCTION
40	RXHP	Receiver Baseband AC-Coupling Highpass Corner Frequency Control Logic Input. Connect to ground if not being used.
41	VCCRFL	Receiver Baseband Filter Supply Voltage. Bypass with a capacitor as close as possible to the pin.
42	TXBBI-	Transmitter Baseband I-Channel Differential Inputs
43	TXBBI+	
44	TXBBQ+	Transmitter Baseband Q-Channel Differential Inputs
45	TXBBQ-	
46	VCCRXM	Receiver Downconverters Supply Voltage. Bypass with a capacitor as close as possible to the pin.
47	RXTX	Mode Control Logic Input. See Table 1 for operating modes.
48	ENABLE	Mode Control Logic Input. See Table 1 for operating modes.
—	EP	Exposed Paddle. Connect to the ground plane with multiple vias for proper operation and heat dissipation. Do not share with any other pin grounds and bypass capacitors' ground.

**Table 1. Operating Mode for MIMO Master and Single Configuration (Note 5)**

MODE	MODE CONTROL LOGIC INPUTS			CIRCUIT BLOCK STATES				
	SPI REG 16, D1:D0 (Note 6)	ENABLE PIN	RXTX PIN	Rx PATH	Tx PATH	PLL, VCO	CLOCK OUT	CALIBRATION SECTIONS ON
<b>SHUTDOWN</b>	xx	0	0	Off	Off	Off	Off	None
<b>STANDBY (Note 7)</b>	01	0	1	Off	Off	On	On	None
<b>CLOCK OUT</b>	00 (Note 11)	0	1	Off	Off	Off	On	None
<b>Rx</b>	01	1	1	On	Off (Note 8)	On	On	None
<b>Tx</b>	01	1	0	Off	On	On	On	None
<b>Tx CALIBRATION (Note 9)</b>	11	1	0	Off	On (except PA driver)	On	On	AM detector + RX I,Q buffers
<b>Rx CALIBRATION (Note 10)</b>	11	1	1	On (except LNA)	On (except PA driver)	On	On	Loopback

**Note 5:** Set SPI Reg 24 D1:D0 = "00" for single-transceiver mode of operation. Set SPI Reg 16 D4:D3 = "11," Reg 24 D8 = "1," Reg 24 D1:D0 = "01" for MIMO master configuration.

**Note 6:** Unused states of SPI Reg 16, D1:D0 above are not tested, and therefore, should not be used.

**Note 7:** Parts of transceiver may be selectively enabled.

**Note 8:** PA bias DAC may be kept active in these non-transmit mode(s) by SPI programming.

**Note 9:** Set SPI Reg 5 D5 = "1" to mux AM detector output to RXBB pins.

**Note 10:** Set SPI Reg 26 D3 = "1."

**Note 11:** CLKOUT signal is active independent of the states of SPI Reg 16, D1:D0, and is only dependent on the states of ENABLE and RXTX pins. However, to ensure that the rest of the chip is off when the CLKOUT is active in the clock-out mode, set SPI Reg 16, D1:D0 to "00" as shown above.

# 3.3GHz to 3.9GHz Wireless Broadband RF Transceiver

**Table 2.** Operating Mode for MIMO Slave Configuration (Note 12)

MODE	MODE CONTROL LOGIC INPUTS			CIRCUIT BLOCK STATES				
	SPI REG 16, D1:D0 (Note 4)	ENABLE PIN	RXTX PIN	Rx PATH	Tx PATH	PLL, VCO	CLOCK OUT	CALIBRATION SECTIONS ON
<b>SHUTDOWN</b>	xx	0	0	Off	Off	Off	Off	None
<b>STANDBY (Note 7)</b>	01	0	1	Off	Off	Off	On	None
<b>CLOCK OUT</b>	00 (Note 11)	0	1	Off	Off	Off	On	None
<b>Rx</b>	01	1	1	On	Off (Note 8)	Off	On	None
<b>Tx</b>	01	1	0	Off	On	Off	On	None
<b>Tx CALIBRATION (Note 9)</b>	11	1	0	Off	On (except PA driver)	Off	On	AM detector + RX I,Q buffers
<b>Rx CALIBRATION (Note 10)</b>	11	1	1	On (except LNA)	On (except PA driver)	Off	On	Loop-back

**Note 12:** Set SPI Reg 16 D4:3 = "00," Reg 24 D8 = "0," Reg 24 D1:0 = "10" to select the MIMO slave configuration.

## Detailed Description

### Configurations

The MAX2838 can be configured in a) single mode, for non-MIMO or SISO applications, b) MIMO master mode, and c) MIMO slave mode. Options b) and c) are for MIMO applications where a coherent LO is required for all transmitters and all receivers.

### Modes of Operation

The modes of operation for the MAX2838 are clock-out, shutdown, standby, Tx, Rx, Tx calibration, and Rx calibration. See Table 1 for a summary of the modes of operation. The logic input pins—RXTX (pin 47) and ENABLE (pin 48)—control the various modes.

#### Shutdown Mode (Complete IC Power-Down)

All circuit blocks are powered down, except the 4-wire serial bus and its internal programmable registers. Current drain is the minimum possible with the supply voltages applied. If the digital supply voltage is applied at the VCCDIG pin, the registers can be loaded.

#### Standby Mode

PLL, VCO, and LO generation blocks are ON, so that Tx or Rx modes can be quickly enabled from this mode. These and other blocks may be selectively enabled in this mode.

#### Rx Mode

All Rx circuit blocks are powered on and active. Antenna signal is applied; RF is downconverted, filtered, and buffered at Rx BB I & Q outputs.

#### Tx Mode

All Tx circuit blocks are powered on. The external PA is powered on after a programmable delay.

#### Clock-Out Only

Only the clock-out signal is active on the CLKOUT pin. The clock output divider is also functional. The rest of the transceiver is powered down.

#### Rx Calibration

Part of the Rx and Tx circuit blocks except the LNA and PA driver are powered on and active. The transmitter IQ input signal is upconverted to RF and at the output of the Tx gain control (VGA). It is fed to the receiver at the input of the downconverter. Either or both of the two receiver channels can be connected to the transmitter and powered on. The I/Q lowpass filters are not present in the transmitter signal path (they are bypassed).

#### Tx Calibration

All Tx circuit blocks except the PA driver and external PA are powered on and active. The AM detector and receiver I/Q channel buffers are also on, along with multiplexers in receiver side to route this AM detector's signal to each I and Q differential lines.

# 3.3GHz to 3.9GHz Wireless Broadband RF Transceiver

## Programmable Registers and 4-Wire SPI-Interface

## Chip Information

PROCESS: BiCMOS

The MAX2838 includes 32 programmable 16-bit registers. The most significant bit (MSB) is the read/write selection bit. The next 5 bits are register addresses. The 10 least significant bits (LSBs) are register data. Register data is loaded through the 4-wire SPI/MICROWIRE™-compatible serial interface. Data at the DIN pin is shifted in MSB first and is framed by CS. When CS is low, the clock is active, and input data is shifted at the rising edge of the clock. During the read mode, register data selected by address bits is shifted out to the DOUT pin at the falling edges of the clock. At CS rising edge, the 10-bit data bits are latched into the register selected by address bits. See [Figure 1](#).

MICROWIRE is a trademark of National Semiconductor Corp.
