

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

1. Overview

1.1 Features

The M16C Family offers a robust platform of 32-/16-bit CISC microcomputers (MCUs) featuring high ROM code efficiency, extensive EMI/EMS noise immunity, ultra-low power consumption, high-speed processing in actual applications, and numerous and varied integrated peripherals. Extensive device scalability from low- to high-end, featuring a single architecture as well as compatible pin assignments and peripheral functions, provides support for a vast range of application fields.

The R32C/100 Series is a high-end microcontroller series in the M16C Family. With a 4-Gbyte memory space, it achieves maximum code efficiency and high-speed processing with 32-bit CISC architecture, multiplier, multiply-accumulate unit, and floating point unit. The selection from the broadest choice of on-chip peripheral devices — UART, CRC, DMAC, A/D and D/A converters, timers, I²C, and WDT enables to minimize external components.

The R32C/100 Series, in particular, provides the R32C/120 Group, a product specific to vehicle network. This product, provided as 100-pin plastic molded LQFP package, configures one channel of CAN, two channels of LIN, and standard peripherals.

1.1.1 Applications

Automotive, audio, communication equipment, industrial equipment etc.

1.1.2 Performance Overview

Table 1.1 and Table 1.2 show the performance overview of the R32C/120 Group.

1.5 Pin Definitions and Functions

Table 1.7 to Table 1.9 shows the pin definitions and functions.

Table 1.7 Pin Definitions and Functions (1/3)

Function	Symbol	I/O	Description
Power supply	VCC, VSS	I	Applicable as follows: VCC = 3.0 to 5.5 V, VSS = 0 V
Connecting pins for decoupling capacitor	VDC0, VDC1	—	A decoupling capacitor for internal voltage should be connected between VDC0 and VDC1
Analog power supply	AVCC, AVSS	I	Power supply for the A/D converter. AVSS should be connected to VSS
Reset input	$\overline{\text{RESET}}$	I	The MCU is reset when this pin is driven low
CNVSS	CNVSS	I	This pin should be connected to VSS via a resistor.
Debug port	NSD	I/O	This pin is to communicate with a debugger. It should be connected to VCC via a resistor of 1 to 4.7 k Ω
Main clock input	XIN	I	Input/output for the main clock oscillator. A crystal, or a ceramic resonator should be connected between pins XIN and XOUT. An external clock should be input at the XIN while leaving the XOUT open
Main clock output	XOUT	O	
Sub clock input	XCIN	I	Input/output for the sub clock oscillator. A crystal oscillator should be connected between pins XCIN and XCOUT. An external clock should be input at the XCIN while leaving the XCOUT open
Sub clock output	XCOUT	O	
Clock output	CLKOUT	O	Output of the clock with the same frequency as fC, f8, or f32
External interrupt input	$\overline{\text{INT0}}$ to $\overline{\text{INT5}}$	I	Input for external interrupts
NMI input	P8_5/ $\overline{\text{NMI}}$	I	Input for NMI
Key input interrupt	$\overline{\text{KI0}}$ to $\overline{\text{KI3}}$	I	Input for the key input interrupt
I/O ports	P0_0 to P0_7, P1_0 to P1_7, P2_0 to P2_7, P3_0 to P3_7, P4_0 to P4_7, P5_0 to P5_7, P6_0 to P6_7, P7_0 to P7_7, P8_0 to P8_4, P8_6, P8_7, P9_3 to P9_7, P10_0 to P10_7	I/O	I/O ports in CMOS. Each port can be programmed to input or output under the control of the direction register. Pull-up resistors are selected for following 4-pin units, but are enabled only for the input pins: Pi_0 to Pi_3 and Pi_4 to Pi_7 (i = 0 to 10)
Input port	P9_1	I	Input port in CMOS. Pull-up resistors are selectable for P9_1 and P9_3

Table 1.8 Pin Definitions and Functions (2/3)

Function	Symbol	I/O	Description
Timer A	TA0OUT to TA4OUT	I/O	Timers A0 to A4 input/output
	TA0IN to TA4IN	I	Timers A0 to A4 input
Timer B	TB0IN to TB5IN	I	Timers B0 to B5 input
Three-phase motor control timer output	U, $\bar{U}$, V, $\bar{V}$, W, $\bar{W}$	O	Three-phase motor control timer output
Serial interface	CTS0 to CTS4	I	Handshake input
	RTS0 to RTS4	O	Handshake output
	CLK0 to CLK4	I/O	Transmit/receive clock input/output
	RXD0 to RXD4	I	Serial data input
	TXD0 to TXD4	O	Serial data output
I ² C bus (simplified)	SDA0 to SDA2	I/O	Serial data input/output
	SCL0 to SCL2	I/O	Transmit/receive clock input/output
Serial interface special functions	STXD0 to STXD2	O	Serial data output in slave mode
	SRXD0 to SRXD2	I	Serial data input in slave mode
	$\overline{SS}0$ to $\overline{SS}2$	I	Input to control serial interface special functions
A/D converter	AN_0 to AN_7, AN0_0 to AN0_7, AN2_0 to AN2_7	I	Analog input for the A/D converter
	ADTRG	I	External trigger input for the A/D converter
	ANEX0	I/O	Expanded analog input for the A/D converter and output in external op-amp connection mode
	ANEX1	I	Expanded analog input for the A/D converter
D/A converter	DA0, DA1	O	Output for the D/A converter
Reference voltage input	VREF	I	Reference voltage input for the A/D converter and D/A converter

Table 1.9 Pin Definitions and Functions (3/3)

Function	Symbol	I/O	Description
Intelligent I/O	IIO0_0 to IIO0_7	I/O	Input/output for the Intelligent I/O group 0. Either input capture or output compare is selectable
	IIO1_0 to IIO1_7	I/O	Input/output for the Intelligent I/O group 1. Either input capture or output compare is selectable
	UD0A, UD0B, UD1A, UD1B	I	Input for the two-phase encoder
Serial bus interface	SSO0	I/O	Serial data output. Functions as serial data input/output in 4-wire serial bus mode
	SSI0	I/O	Serial data input. Functions as serial data input/output in 4-wire serial bus mode
	SSCK0	I/O	Transmit/receive clock input/output
	$\overline{\text{SCS0}}$	I/O	Input/output to control the synchronous serial interface
LIN module	LIN0OUT, LIN1OUT	O	Transmit data output for the LIN communications
	LIN0IN, LIN1IN	I	Receive data input for the LIN communications
CAN module	CAN0IN	I	Receive data input for the CAN communications
	CAN0OUT	O	Transmit data output for the CAN communications
	$\overline{\text{CAN0WU}}$	I	Input for the CAN wake-up interrupt

2. Central Processing Unit (CPU)

The CPU contains registers as shown below. There are two register banks each consisting of registers R2R0, R3R1, R6R4, R7R5, A0 to A3, SB, and FB.

Figure 2.1 CPU Registers

2.1 General Purpose Registers

2.1.1 Data Registers (R2R0, R3R1, R6R4, and R7R5)

These 32-bit registers are primarily used for transfers and arithmetic/logic operations.

Each of the registers can be divided into upper and lower 16-bit registers, e.g. R2R0 can be divided into R2 and R0, R3R0 can be divided into R3 and R1, etc.

Moreover, data registers R2R0 and R3R1 can be divided into four 8-bit data registers: upper (R2H and R3H), mid-upper (R2L and R3L), mid-lower (R0H and R1H), and lower (R0L and R1L).

2.1.2 Address Registers (A0, A1, A2, and A3)

These 32-bit registers have functions similar to data registers. They are also used for address register indirect addressing and address register relative addressing.

2.1.3 Static Base Register (SB)

This 32-bit register is used for SB relative addressing.

2.1.4 Frame Base Register (FB)

This 32-bit register is used for FB relative addressing.

2.1.5 Program Counter (PC)

This 32-bit counter indicates the address of the instruction to be executed next.

2.1.6 Interrupt Vector Table Base Register (INTB)

This 32-bit register indicates the start address of a relocatable vector table.

2.1.7 User Stack Pointer (USP) and Interrupt Stack Pointer (ISP)

Two types of 32-bit stack pointers (SPs) are provided: user stack pointer (USP) and interrupt stack pointer (ISP).

Use the stack pointer select flag (U flag) to select either the user stack pointer (USP) or the interrupt stack pointer (ISP). The U flag is bit 7 in the flag register (FLG). Refer to 2.1.8 "Flag Register (FLG)" for details.

To minimize the overhead of interrupt sequence due to less memory access, set the user stack pointer (USP) or the interrupt stack pointer (ISP) to a multiple of 4.

2.1.8 Flag Register (FLG)

This 32-bit register indicates the CPU status.

2.1.8.1 Carry Flag (C flag)

This flag becomes 1 when any of the carry, borrow, shifted-out bit, etc. is generated in the arithmetic logic unit (ALU).

2.1.8.2 Debug Flag (D flag)

This flag is only for debugging. Only set this bit to 0.

2.1.8.3 Zero Flag (Z flag)

This flag becomes 1 when the result of an operation is 0; otherwise it is 0.

2.1.8.4 Sign Flag (S flag)

This flag becomes 1 when the result of an operation is a negative value; otherwise it is 0.

2.1.8.5 Register Bank Select Flag (B flag)

This flag selects a register bank. It indicates 0 when the register bank 0 is selected, and 1 when the register bank 1 is selected.

2.1.8.6 Overflow Flag (O flag)

This flag becomes 1 if an overflow occurs in an operation; otherwise it is 0.

2.1.8.7 Interrupt Enable Flag (I flag)

This flag enables maskable interrupts. To disable maskable interrupts, set this flag to 0. To enable them, set this flag to 1. When an interrupt is accepted, the flag becomes 0.

2.1.8.8 Stack Pointer Select Flag (U flag)

To select the interrupt stack pointer (ISP), set this flag to 0. To select the user stack pointer (USP), set this flag to 1.

It becomes 0 when a hardware interrupts is accepted or when an INT instruction designated by a software interrupt number from 0 to 127 is executed.

2.1.8.9 Floating-point Underflow Flag (FU flag)

This flag becomes 1 when an underflow occurs in a floating-point operation; otherwise it is 0. It also becomes 1 when the operand has invalid numbers (subnormal numbers).

2.1.8.10 Floating-point Overflow Flag (FO flag)

This flag becomes 1 when an overflow occurs in a floating-point operation; otherwise it is 0. It also becomes 1 when the operand has invalid numbers (subnormal numbers).

2.1.8.11 Processor Interrupt Priority Level (IPL)

The processor interrupt priority level (IPL), consisting of three bits, selects a processor interrupt priority level from level 0 to 7. An interrupt is acceptable when the interrupt request level is higher than the selected IPL.

When the processor interrupt priority level (IPL) is set to 111b (level 7), all interrupts are disabled.

2.1.8.12 Fixed-point Radix Point Designation Bit (DP bit)

This bit designates the radix point. It also specifies which portion of the fixed-point multiplication result to take. It is used in the MULX instruction.

2.1.8.13 Floating-point Rounding Mode (RND)

The 2-bit floating-point rounding mode selects a rounding mode for floating-point calculation results.

2.1.8.14 Reserved

Only set this bit to 0. The read value is undefined.

2.2 Fast Interrupt Registers

The following three registers are provided to minimize the overhead of interrupt sequence.

2.2.1 Save Flag Register (SVF)

This 32-bit register is used to save the flag register when a fast interrupt is generated.

2.2.2 Save PC Register (SVP)

This 32-bit register is used to save the program counter when a fast interrupt is generated.

2.2.3 Vector Register (VCT)

This 32-bit register is used to indicate a jump address when a fast interrupt is generated.

2.3 DMAC-associated Registers

There are seven types of DMAC-associated registers.

2.3.1 DMA Mode Registers (DMD0, DMD1, DMD2, and DMD3)

These 32-bit registers are used to set DMA transfer mode, bit rate etc.

2.3.2 DMA Terminal Count Registers (DCT0, DCT1, DCT2, and DCT3)

These 24-bit registers are used to set DMA transfer counting.

2.3.3 DMA Terminal Count Reload Registers (DCR0, DCR1, DCR2, and DCR3)

These 24-bit registers are used to set the reloaded values for DMA terminal count registers.

2.3.4 DMA Source Address Registers (DSA0, DSA1, DSA2, and DSA3)

These 32-bit registers are used to set DMA source addresses.

2.3.5 DMA Source Address Reload Registers (DSR0, DSR1, DSR2, and DSR3)

These 32-bit registers are used to set the reloaded value for DMA source address register.

2.3.6 DMA Destination Address Registers (DDA0, DDA1, DDA2, and DDA3)

These 32-bit registers are used to set DMA destination address.

2.3.7 DMA Destination Address Reload Registers (DDR0, DDR1, DDR2, and DDR3)

These 32-bit registers are used to set reloaded values for DMA destination address registers.

3. Memory

Figure 3.1 shows the memory map of the R32C/120 Group.

The R32C/120 Group provides a 4-Gbyte address space from 00000000h to FFFFFFFFh.

The internal ROM is mapped to the end of the memory map with the ending address fixed at FFFFFFFFh. Therefore, the 256-Kbyte internal ROM is mapped from FFFC0000h to FFFFFFFFh.

The fixed interrupt vector table which contains each start address of interrupt handlers is mapped from FFFFFFDCh to FFFFFFFFh.

The internal RAM is mapped to the beginning of the memory map with the starting address fixed at 00000400h. Therefore, the 20-Kbyte internal RAM is mapped from 00000400h to 000053FFh. Besides being used for data storage, the internal RAM functions as a stack(s) for subroutines and/or interrupt handlers.

Special Function Registers (SFRs), which are control registers for peripheral functions, are mapped from 00000000h to 000003FFh, and from 00040000h to 0004FFFFh. Unoccupied SFR locations are reserved. No access is allowed.

4. Special Function Registers (SFRs)

SFRs are memory-mapped peripheral registers that control the operation of peripherals. Table 4.1 SFR List (1) to Table 4.41 SFR List (41) list the SFR details.

Note:

1. Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

		64 Kbyte block		0.20	3.0	s
—	Data retention ⁽²⁾	$T_a = 55^{\circ}\text{C}$ ^(3, 4)	20			years

Notes:

1. Program/erase definition

This value represents the number of erasures per block.

If the flash memory is programmed/erased n times, each block can be erased n times.

i.e. If 4-word write is performed in 512 different addresses in the block A of 4 Kbyte and then the block is erased, it is considered the programming/erase is performed just once.

However a write in the same address more than once for one erase is disabled. (overwrite disabled).

2. The data retention time includes the periods when the supply voltage is not applied and no clock is provided.

3. This data retention includes 3000 hours in $T_a = 125^{\circ}\text{C}$ and 7000 hours in $T_a = 85^{\circ}\text{C}$.

4. Please contact a Renesas sales office regarding data retention time other than the above.

Notes:

1. Program/erase definition

This value represents the number of erasure per block.

If the flash memory is programmed/erased n times, each block can be erased n times.

i.e. If a word write is performed in different 16 addresses in a block and then the block is erased, it is considered the programming/erasure is performed just once. However a write in the same address more than once for one erasure is disabled. (overwrite disabled).

REVISION HISTORY	R32C/120 Group Datasheet
-------------------------	---------------------------------

Rev.	Date	Description	
		Page	Summary
		27	• Changed reset values “XXXX XXXXb” and “XXXX 000Xb” for registers U3RB and U4RB in Table 4.9 to “XXXXh”
		29	• Changed expression of register name “Xi Register Yi Register” and register symbol “XiR, YiR” in Table 4.11 to “Xi Register/Yi Register” and “XiR/YiR”, respectively
		34	• Changed hexadecimal format of reset values for registers PD0 to PD7, PD9, and PD10 in Table 4.16 to binary
		38-40	• Changed register name “Port Pi_j Port Function Select Register” in Tables 4.20 to 4.22 to “Port Pi_j Function Select Register”
		42	• Changed register name “DMAi Request Source Select Register 1” in Table 4.24 to “DMAi Request Source Select Register” • Changed register names “Wake-up/Interrupt Priority Level Control Register 2” and “Wake-up/Interrupt Priority Level Control Register 1” in Table 4.24 to “Wake-up IPL Setting Register 2” and “Wake-up IPL Setting Register 1”, respectively
		43	• Modified “X” in reset values for unassigned bits to “0” for the following registers in Table 4.25 : LCW, LBRG, LMD0, LBRK, LSPC, LRFC, LSC, LTC, LST, and LEST
		59	• Modified reset value “00h” for C0CLKR in Table 4.41 to “000X 0000b”
			Chapter 5. Electrical Characteristics
		—	• Made minor text modifications to this chapter
		61	• Added description of dV_{CC}/dt to Table 5.2
		62	• Added Note 2 to Table 5.3
		63	• Corrected a typo “pots” in line 2 of Note 2 for Table 5.4 to “ports”
		67	• Deleted specification of “ t_{PS} ” from Table 5.8
		68	• Corrected a typo “32 Kbyte block” in Table 5.9 to “32 byte block” • Deleted the measurement condition from Table 5.10
		69	• Changed voltage condition for Table 5.12 from “Vcc = 3.0 to 5.5 V” to “Vcc = 4.2 to 5.5 V” • Changed the following expressions in Table 5.13 : “PLL frequency synthesizer stabilization time” to “PLL lock time” and “ $t_{OSC(PLL)}$ ” to “ $t_{LOCK(PLL)}$ ”; Added the measurement condition and Note 3 for $t_{LOCK(PLL)}$ • Newly added two characteristics: “Lock detection” and “Unlock detection” and Note 1 • Changed maximum value for $f_{SO(PLL)}$ in Table 5.13 from “65” to “80”
		70	• Changed the order of description of $t_{rec(STOP)}$ and $t_{rec(WAIT)}$ in Table 5.14 and Figure 5.4
		73, 84	• Deleted “P8_5” from “Characteristic” of “Pull-up resistor” in Tables 5.17 and 5.37
		74, 85	• Changed expression “Running” for “Measurement condition” in Tables 5.18 and 5.38 to “Active”; Added “XIN” as “Active” to first, third, and sixth rows of respective tables
		75	• Modified expression “Sample time” for “Characteristics” in Table 5.19 to “Sampling time”

2. Renesas shall have no liability for damages or infringement of any intellectual property or other rights arising out of the use of any information in this document, including, but not limited to, product data, diagrams, charts, programs, algorithms, and application circuit examples.
3. You should not use the products or the technology described in this document for the purpose of military applications such as the development of weapons of mass destruction or for the purpose of any other military use. When exporting the products or technology described herein, you should follow the applicable export control laws and regulations, and procedures required by such laws and regulations.
4. All information included in this document such as product data, diagrams, charts, programs, algorithms, and application circuit examples, is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas products listed in this document, please confirm the latest product information with a Renesas sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas such as that disclosed through our website. (<http://www.renesas.com>)
5. Renesas has used reasonable care in compiling the information included in this document, but Renesas assumes no liability whatsoever for any damages incurred as a result of errors or omissions in the information included in this document.
6. When using or otherwise relying on the information in this document, you should evaluate the information in light of the total system before deciding about the applicability of such information to the intended application. Renesas makes no representations, warranties or guarantees regarding the suitability of its products for any particular application and specifically disclaims any liability arising out of the application and use of the information in this document or Renesas products.
7. With the exception of products specified by Renesas as suitable for automobile applications, Renesas products are not designed, manufactured or tested for applications or otherwise in systems the failure or malfunction of which may cause a direct threat to human life or create a risk of human injury or which require especially high quality and reliability such as safety systems, or equipment or systems for transportation and traffic, healthcare, combustion control, aerospace and aeronautics, nuclear power, or undersea communication transmission. If you are considering the use of our products for such purposes, please contact a Renesas sales office beforehand. Renesas shall have no liability for damages arising out of the uses set forth above.
8. Notwithstanding the preceding paragraph, you should not use Renesas products for the purposes listed below:
 - (1) artificial life support devices or systems
 - (2) surgical implantations
 - (3) healthcare intervention (e.g., excision, administration of medication, etc.)
 - (4) any other purposes that pose a direct threat to human lifeRenesas shall have no liability for damages arising out of the uses set forth in the above and purchasers who elect to use Renesas products in any of the foregoing applications shall indemnify and hold harmless Renesas Technology Corp., its affiliated companies and their officers, directors, and employees against any and all damages arising out of such applications.
9. You should use the products described herein within the range specified by Renesas, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas shall have no liability for malfunctions or damages arising out of the use of Renesas products beyond such specified ranges.
10. Although Renesas endeavors to improve the quality and reliability of its products, IC products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Please be sure to implement safety measures to guard against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other applicable measures. Among others, since the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
11. In case Renesas products listed in this document are detached from the products to which the Renesas products are attached or affixed, the risk of accident such as swallowing by infants and small children is very high. You should implement safety measures so that Renesas products may not be easily detached from your products. Renesas shall have no liability for damages arising out of such detachment.
12. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written approval from Renesas.
13. Please contact a Renesas sales office if you have any questions regarding the information contained in this document, Renesas semiconductor products, or if you have any other inquiries.
