

125A High-Current Waterproof Connectors

EV Series

■ Features

1. Screw Cramp

Reliable lock by screw and nut. Superior anti-vibration performance by mounting to chassis.

2. Waterproof Structure

The EV series is IP67 water resistant in unmated state (when EV1-62RA-3SB, EV1-62RA-2SB is used). It is IP68/X9K water resistant in mated. The use of special rubber component for the internal seals enhance oil and water resistance.

3. Standard Tool for Contact Assembly

Contacts can be crimped using readily available JIS standard tools (JIS C 9711).

4. Downsizing

Staggered panel flange design saves space.

5. Lightweight

The shell is constructed of an aluminum alloy material enabling it to be lightweight.

6. Multi-Point Contact Spring

Highly reliable contact structure allows for a high current capability, guards against vibration to the contact and decreases contact resistance.

7. Shielded Design

The metal shell enhances EMI shielding.

8. Finger Protection

Contact and connector design protects against accidental electrical shock using IEC 60601 test procedure.

Measurement Condition

The plug has three contacts where 20 mm² electric wires are connected and then covered with a corrugated housing. Measurement was taken by connecting copper bus bars of 3 mm x 12 mm to the three contacts of the receptacle and wiring in series.

Remarks

Derating curve and temperature rise curve changes slightly by a given cable that is being used and slight variations occur under the same conditions. Therefore, the values indicated above are reference values and not guaranteed values.
