
General Description

EM60000 series is an 8-bit micro-controller based sound processor IC with an audio function that delivers multi-channel speech and instrument playback. The micro-controller includes a powerful 8-bit RISC CPU to handle most of the speech/melody functions, an 8K word program ROM, and a voice ROM that extends up to 2M bytes. There are two speech channels and four melody channels that can be played back simultaneously. The speech synthesis is implemented by software with support for a wide range of sampling rates and different volume levels. The micro-controller also provides real instrument waveforms to obtain good quality audio melody. The EM60000 offers one 8-bit input port and one 8-bit I/O port with internal pull-low/wake-up functions for user's applications. In addition, up to three general I/O ports are provided. By programming the micro-controller, applications such as section combination, trigger mode, output control, keyboard matrix and other logic functions can be easily implemented. Together, all these powerful features will inspire the user to realize a wide variety of ideas.

Features

- Operating voltage: 2.4 ~ 5.5V.
- 8-bit RISC CPU.
- Two general-purpose timers and two speech timers with interrupts.
- 8K word program ROM access.
- Total of six channels—the 2 speech and 4 melody channels can be played simultaneously.
- Wide-range of speech sampling rates—4KHz to 20KHz (program controlled).
- Speech/voice algorithm implemented by software—PCM, ASPCM, ADPCM.
- On chip Voice ROM will extend up to 2M Bytes.
- Uses real instrument waveforms for good quality audio melody.
- Built-in 8-bit by 8-bit hardware multiplier with 16-bit result.
- One 8-bit input port and one 8-bit I/O port with pull-low/wake-up functions.
- Provides additional general-purpose I/O ports (up to 3 ports).
- Provides crystal oscillation or internal oscillator (by connecting a resistor).
- Two 8-bit current DAC outputs.
- Built-in watchdog timer (WDT).

Parts List

The EM60000 series have 8K×13 bit program ROM and 144 bytes RAM.

Part number	Voice ROM	Input pin	I/O pin	Output pin
EM60001	32K × 8 bits	8 (Port 1)	16 (Port 2, 3)	None
EM60101	64K × 8 bits	8 (Port 1)	24 (Port 2, 3, 4)	None
EM60201	128K × 8 bits	8 (Port 1)	24 (Port 2, 3, 4)	None
EM60301	256K × 8 bits	8 (Port 1)	24 (Port 2, 3, 4)	None
EM60600S	2048K × 8 bits	8 (Port 1)	24 (Port 2, 3, 4)	8 (Port 5)

Pin Assignments

Symbol	I/O	Function Description
OSCI	I	Crystal in/Resistor.
OSCO	O	Clock output.
P1.0~7	I	Bit 0~7 of port 1.
P2.0~7	I/O	Bit 0~7 of port 2.
P3.0~7	I/O	Bit 0~7 of port 3.
P4.0~7	I/O	Bit 0~7 of port 4(except EM60001).
P5.0~7	O	Bit 0~7 of port 5(except EM60001, EM60101, EM60201, EM60301).
VO1	O	Current output of DAC 1.
VO2	O	Current output of DAC 2.
VDD	-	Positive power supply.
VSS	-	Negative power supply.
TEST	I	For test only (normally floating).
RESET	I	Reset pin (active low, internal pull-high)
