| System connection                            |   |  |
|--|---|--|
| Connection type                              | Hirschmann male connector M26, 12-pin   |  |
| Permitted cable length                       | ≤ 50 m <sup>1)</sup>  |  |
| Permitted cross-section                      | ≥ 0.75 mm²  |  |
| Configuration method                         | PC with CDS (Configuration and Diagnostic Software)   |  |
| Configuration connection                     |   |  |
| Connection type                              | Female connector M8, 4-pin  |  |
| Display elements                             | LEDs<br>7-segment display   |  |
| Fieldbus, industrial network                 |   |  |
| Integration via EFI gateways                 | CANopen, Ethernet, PROFIBUS DP, PROFIBUS PROFIsafe, PROFINET PROFIsafe $^{2)}$                |  |
| Integration via Flexi Soft safety controller | CANopen, DeviceNet™, EtherCAT®, EtherNet/IP™, Modbus TCP, PROFIBUS DP, PROFINET <sup>3)</sup> |  |

 $^{(1)}$  Depending on load, power supply and wire cross-section. The technical specifications must be observed.

<sup>2)</sup> For a suitable EFI-gateway see modules and gateways in the accessory section of connection systems.

<sup>3)</sup> For additional information on Flexi Soft -> www.sick.com/Flexi\_Soft.

## Electrical data

| Protection class              | III (EN 50178)   |  |
|-------------------------------|--|--|
| Supply voltage V <sub>S</sub> | 24 V DC (19.2 V DC 28.8 V DC) $^{(1)}$   |  |
| Residual ripple               | $\leq 10 \%^{2}$   |  |
| Power consumption             | $\leq$ 0.2 A: $\leq$ 0.6 A (depending on type)                                 |  |
| Safety outputs (OSSD)         |  |  |
| Type of output                | 2 PNP semiconductors, short-circuit protected, cross-circuit monitored $^{3)}$ |  |
| Switching voltage HIGH        | H 24 V DC (V <sub>S</sub> - 2.25 V DC V <sub>S</sub> )                         |  |
| Switching voltage LOW         | ≤ 2 V DC   |  |
| Switching current             | ≤ 500 mA   |  |
| Diagnostic outputs            |  |  |
| Type of output                | PNP semiconductor, short-circuit protected                                     |  |
| Switching voltage HIGH        | 24 V DC (V <sub>S</sub> – 4.2 V DC V <sub>S</sub> )                            |  |
| Switching voltage LOW         | High resistance  |  |
| Switching current             | ≤ 100 mA   |  |

<sup>1)</sup> The external voltage supply must be capable of buffering brief mains voltage failures of 20 ms as specified in EN 60204-1. Suitable power supplies are available as accessories from SICK.

 $^{2)}$  Within the limits of  $\mathrm{V}_{S}.$ 

 $^{3)}$  Applies to the voltage range between –30 V and +30 V.

### Mechanical data

| Housing cross-section | 52 mm x 55.5 mm                          |

# **Connection diagram**

M4000 Area connected to UE10-30S safety relay

# ( 2) PELV

#### Task

Connection of an M4000 Area multiple light beam safety device to a UE10-30S safety relay.

Operating mode: with restart interlock and external device monitoring.

#### **Operating characteristics**

When the light path is clear and the UE10-30S is de-energized and functioning correctly, the yellow LED on the receiver and the H3 lamp flash. The system is ready for switch-on and waits for an input signal/switch-on signal. The system is enabled by pressing and releasing the S1 button. The OSSD1 and OSSD2 outputs are live, the UE10-30S is switched on. On interruption of one or several of the light beams, the UE10-30S is de-energized by the OSSD1 and OSSD2 outputs.

If the optics are dirty, H2 indicator illuminates.

#### Fault analysis

OSSD cross-circuits and short-circuits are detected and lead to the inhibited state (lock-out). The erroneous behavior of the UE10-30S will be detected. The shutdown function is retained. On manipulation (e.g., jamming) of the S1 button, the system does not enable the output current circuits.

### Comments

<sup>1)</sup> Output circuits: These contacts are to be connected to the controller such that, with the output circuit open, the dangerous state is disabled. For categories 4 and 3, this integration must be dual-channel (x/y paths). Single-channel insertion in the control (z path) is only possible with a single-channel control and by taking the risk analysis into account.

<sup>2)</sup> PELV in accordance with the requirements in

#### EN 60204-1/6.4

Take note of the operating instructions of the integrated devices. This applies particularly to the use of configurable functions.

# SICK AT A GLANCE

SICK is one of the leading manufacturers of intelligent sensors and sensor solutions for industrial applications. A unique range of products and services creates the perfect basis for controlling processes securely and efficiently, protecting individuals from accidents and preventing damage to the environment.

We have extensive experience in a wide range of industries and understand their processes and requirements. With intelligent sensors, we can deliver exactly what our customers need. In application centers in Europe, Asia and North America, system solutions are tested and optimized in accordance with customer specifications. All this makes us a reliable supplier and development partner.

Comprehensive services complete our offering: SICK LifeTime Services provide support throughout the machine life cycle and ensure safety and productivity.

For us, that is "Sensor Intelligence."
