

MGA-683P8

Low Noise And High Linearity Active Bias
Low Noise Amplifier

Data Sheet

Description

Avago Technologies' MGA-683P8 is an economical, easy-to-use GaAs MMIC Low Noise Amplifier (LNA). The LNA has low noise and high linearity achieved through the use of Avago Technologies' proprietary 0.25 μm GaAs Enhancement-mode pHEMT process. It is housed in a miniature 2.0 x 2.0 x 0.75 mm³ 8-pin Quad-Flat-Non-Lead (QFN) package. It is designed for optimum use from 450 MHz up to 2 GHz. The compact footprint and low profile coupled with low noise, high gain and high linearity make the MGA-683P8 an ideal choice as a low noise amplifier for cellular infrastructure for GSM and CDMA. For optimum performance at higher frequency from 1.5 GHz to 4 GHz, the MGA-684P8 is recommended. Both MGA-683P8 and MGA-684P8 share the same package and pinout.
