Built In Test (BIT) Functionality - USB

This media converter can be offered with built in test functionality accessible through a Console Port via Universal Serial Bus 2.0 (USB 2.0) or via RS422 UART (TXD) or both options can be made available. Functional block diagram for these features is shown below.

Universal Serial Bus (2.0) BIT

- Presents itself as a "Virtual" Communications Port
- Compatible with Microsoft Windows, Mac, and Linux OS's.
- On the computer side, open any terminal application (PuTTY, HyperTERM, TeraTERM, etc.) to communicate with the media converter hardware.
- Simple "Human Readable" status messages.

RS422 UART (TXD) BIT

- Useful for when you are interfacing with a embedded microprocessor or micro controller.
- Status messages delimited to allow for easy parsing by embedded software.
