Precautions for Use

- The Chip-LED Taping is much smaller than lead frame type components, thus enable smaller board size, higher packing density, reduced storage space and finally smaller equipment to be obtained.
- Besides, lightweight makes them ideal for miniature application, etc.

Judgment Criteria

Forward Voltage V _F	V _F Max-Increase < 1.1x
Reverse Current I _R	I _R Max-Increase < I _{Rmax}
Luminous Intensity I _V	I _V Decay < 40%

※ Solderability test criteria : coverage is not less than 95%

Note : Measurement shall be taken after the tested samples have been returned to normal ambient conditions (generally after two hours)

Test Circuit

- *Overdrive current proof*

Customer must apply resistors for protection, otherwise slight voltage shift will cause current change with great deal. (Burn out will happen)

- *Storage*

1. The operation of temperature and R.H. are : $5^{\circ}\text{C} \sim 30^{\circ}\text{C}$, 60%R.H. Max.
2. Once the package is opened, the products should be used within a week. Otherwise, they should be kept in a damp-proof box with desiccant. Considering the tape life, we suggest our customers use our products within 1.5 years (from production date).
3. It is recommended to bake before soldering when the package is unsealed more than 72 hrs. The condition is: $60^{\circ}\text{C} \pm 5^{\circ}\text{C}$ for 15hrs.

Reflow Temperature/Time
