

Precision Pulse Control

The Mini-200 is a compact and lightweight pulsed current source designed to drive laser diodes, bars, arrays, or any low-impedance load. The key specifications are output current from 25 A to 200 A, rise and fall times below 10 μs at 200 A, pulse widths from 25 μs to 250 μs , forward voltage from 0 V to 48 V, and pulse repetition rate from single shot to 200 Hz.

System Operation

The Mini-200 output current may be set with an internal potentiometer or an analog voltage. The pulse width is controlled with the input trigger signal.

The system requires two DC voltages for operation, 12 V and compliance voltage equal to 12 V above the laser diode's forward voltage.

Output Cable

The laser or load is connected to the Mini-200 with 22 AWG twisted pair cable (included) with a length of 15 cm (6 inches) or less.

What is included?

- Mini-200**
- Mini-200 Pulser
- DC Input Cable
- Output Cable
- Control Signal Cable
