

Wide Operating Temperature Automotive R²Coupler™

20-kBd Digital Optocoupler Configurable as Low Power, Low Leakage Phototransistor

Data Sheet

Description

The ACPL-M49T is a single channel, high temperature, high CMR, 20-kBd digital optocoupler, configurable as a low power, low leakage phototransistor, specifically for use in the automotive applications. The SO-5 JEDEC registered (MO-155) package outline is surface mountable.

This digital optocoupler uses an insulating layer between the light emitting diode and an integrated photo detector to provide electrical insulation between input and output. Separate connections for the photodiode bias and output transistor collector in a 5-pin configuration increase the speed up to a hundred times over that of a conventional phototransistor by reducing the base-collector capacitance. Common connections with the supply and output pins shorted in a 4-pin configuration delivers low power, low leakage performance as a phototransistor. The ACPL-M49T has an increased common mode transient immunity of 15kV/μs minimum at $V_{CM} = 1500V$ over extended temperature range.

Broadcom® R²Coupler™ isolation products provide the reinforced insulation and reliability needed for critical in automotive and high temperature industrial applications.

Features

- Qualified to Automotive AEC-Q100 Test Guidelines
- High temperature and reliable low-speed digital interface for automotive applications
- Wide temperature range: $-40^{\circ}C \sim 125^{\circ}C$
- 30 kV/μs high common-mode rejection at $V_{CM} = 1500V$ (typ)
- Low power, low leakage phototransistor in a 4-pin configuration
- Compact, auto-insertable SO5 packages
- Low LED drive current: 4 mA (typ)
- Propagation delay: 20 μs (max)
- Worldwide safety approval:
 - UL 1577, 4000 V_{RMS} /1 min.
 - CSA approved
 - IEC/EN/DIN EN 60747-5-5

Applications

- Automotive low-speed digital signal isolation interface
- Inverter fault feedback signal isolation
- Switching power supplies feedback circuit

CAUTION: It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation that may be induced by ESD. The components featured in this data sheet are not to be used in military or aerospace applications or environments.

Functional Diagrams

NOTE The connection of a 0.1- μ F bypass capacitor between pins 4 and 6 is recommended for 5-pin configuration.

NOTE Pins 5 and 6 are externally shorted for 4-pin configuration.
