DESCRIPTION

The WV3EG265M64EFSU is a 2x64Mx64 Double Data Rate SDRAM memory module based on 512Mb DDR SDRAM component. The module consists of sixteen 64Mx8 bit with 4 banks DDR SDRAMs in FBGA packages mounted on a 200 pin substrate.

Synchronous design allows precise cycle control with the use of system clock. Data I/O transactions are possible on both edges and Burst Lengths allow the same device to be useful for a variety of high bandwidth, high performance memory system applications.

NOTES:

- V_{REF} is expected to be equal to 0.5*V_{CCQ} of the transmitting device, and to track variations in the DC level of the same. Peak to peak noise on V_{REF} may not exceed ±2% of the DC value
- V_{TT} is not applied directly to the device. V_{TT} is a system supply for signal termination resistors, is expected to be set equal to V_{REF}, and must track variations in the DC level of V_{REF}
- V_{ID} is the magnitude of the difference between the input level on CK and the input level on CK#.
