

**Tripolar Overvoltage Protection For
Network Interfaces**

PRELIMINARY

DESCRIPTION

Transient suppressor TCP020E is dedicated to ISDN, T1, Ethernet, and data lines protection. Important features - very low breakover voltage combined with low capacitance. May be used as a triple or a single bi-directional suppressor – see schematic diagram.

This product provides:

- low capacitance, allowing high speed signal transmissions with low losses
- low dynamic breakover voltage, protecting submicron microelectronic circuitry
- Compliance with BELLCORE 1089-GR requirements for intrabuilding lightning and power fault surges.

This low stand-off voltage and low capacitance protector is well suited for use in high-speed interfaces as ISDN.
