KK74LV245

OCTAL BUS TRANSCEIVER; 3-State

The KK74LV245 is a low-voltage Si-gate CMOS device and is pin and function compatible with KK74HCT245.

The KK74LV245 is an octal transceiver featuring non-inverting 3-state bus compatible outputs in both send and receive directions. The KK74LV245 features an output enable (OE) input for easy cascading and a send/receive (DIR) input for direction control. OE controls the outputs so that the buses are effectively isolated.

- Output voltage levels are compatible with input levels of CMOS, NMOS and TTL IC_S
- Supply voltage range: 1.2 to 3.6 V
- Low input current: 1.0 µA; 0.1 µA at T = 25 °C
- Output Current: 8 mA at V_{CC} = 3.0 V
- High Noise Immunity Characteristic of CMOS Devices

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, V_{IN} and V_{OUT} should be constrained to the range GND≤(V_{IN} or V_{OUT})≤V_{CC}.

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either GND or V_{CC}). Unused outputs must be left open.
