

M54539P

6-UNIT 700mA TRANSISTOR ARRAY WITH CLAMP DIODE

DESCRIPTION

M54539P six-circuit transistor arrays. The circuits are made of NPN transistors. Both the semiconductor integrated circuits perform high-current driving with extremely low input-current supply.

FEATURES

- Medium breakdown voltage ($BV_{CEO} \geq 20V$)
- High-current driving ($I_{c(max)} = 700mA$)
- With output clamping diodes
- Wide operating temperature range ($T_a = -20$ to $+75^\circ C$)

APPLICATION

Drives of relays and printers, digit drives of indication elements (LEDs and lamps), and drives of thermal printer

FUNCTION

The M54539P have six circuits consisting of NPN transistors. Resistance of $2k\Omega$ is connected to the inputs. The output transistor emitters are connected to the GND pin (pin 8). A spick-killer clamping diode is provided between each collector and COM pin (pin 9), V_{cc} is connected to pin 16. The collector current is 700 mA maximum. Collector-emitter supply voltage is 20V maximum.
