

Proximity Sensors Capacitive, ATEX Thermoplastic Polyester Housing Type CB, Ø18, AC

TRIPLESIELD™

CARLO GAVAZZI

- Capacitive level sensor for solid, fluid or granulated substances
- Featuring **TRIPLESIELD™** sensor protection
- Rated operational voltage: 20-250 VAC
- Adjustable sensing distance 3-12 mm
- Output: SCR with fixed delay of 30 sec.
- Make or break switching function
- LED indication
- High noise immunity
- Non-flush types
- Cable versions
- Fixed output ON-delay of 30 sec.
- ATEX II 3DX T75°C

Product Description

ATEX approved Capacitive proximity switches with sensing distance 12 mm non-flush mounted. 2-wire AC output with make (NO) and break (NC) switching. Grey Ø18 polyester housing with 2 m PVC cable.

Ideal for detecting grain or solids as level indicator in tanks, silos or containers. Typical segments: agriculture, food & Beverage, conveyorbelts, plastic & rubber, etc.

Adjustment Guide

The environments in which capacitive sensors are installed can often be unstable regarding temperature, humidity, object distance and industrial (noise) interference. Because of this, Carlo Gavazzi offers as standard features in all TRIPLESHIELD™ capacitive sensors a user-friendly sensitivity adjustment instead of having a fixed sensing range, extended sensing range to

accommodate mechanically demanding areas, temperature stability to ensure minimum need for adjusting sensitivity if temperature varies and high immunity to electromagnetic interference (EMI).

Note:
Sensors are factory set (default) to maximum rated sensing range.

Installation Hints

Capacitive sensors have the unique ability to detect almost all materials, either in liquid or solid form. Capacitive sensors can detect metallic as well as non-metallic objects, however, their traditional use is for non-metallic materials such as:

- **Plastic Industry**
Resins, regrinds or moulded products.
- **Agriculture**
Feed, solids or grain.

- **Wood Industry**
Saw dust, paper products, door and window frames.
- Materials are detected due to their dielectric constant. The bigger the size of an object, the higher the density of material, the better or easier it is to detect the object. Nominal sensing distance for a capacitive sensor is referenced to a grounded metal plate (ST37). For additional information regarding dielectric ratings of materials please refer to Technical Information.

To avoid interference from inductive voltage/current peaks, separate the prox. switch power cables from any other power cables, e.g. motor, contactor or solenoid cables	Relief of cable strain The cable should not be pulled	Protection of the sensing face A proximity switch should not serve as mechanical stop	Switch mounted on mobile carrier Any repetitive flexing of the cable should be avoided
