

Sulfur Resistant, Pulse Proof Thick Film Chip Resistors

The sulfur resistant pulse proof thick film chip resistors series combines the capability to stand harsh environment operation with high pulse load performance compared to standard pulse proof resistors.

FEATURES

- Superior resistance against sulfur atmosphere (H₂S), according to ASTM B809-95
- High pulse performance, up to 10 kW
- AEC-Q200 qualified
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

APPLICATIONS

- Automotive
- Industrial
- Telecommunication
- Medical equipment

TECHNICAL SPECIFICATIONS							
DESCRIPTION	RCA0402-IF e3	RCA0603-IF e3	RCA0805-IF e3	RCA1206-IF e3	RCA1210-IF e3	RCA2010-IF e3	RCA2512-IF e3
Imperial size	0402	0603	0805	1206	1210	2010	2512
Metric size code	RR1005M	RR1608M	RR2012M	RR3216M	RR3225M	RR5025M	RR6332M
Resistance range	1 Ω to 100 kΩ						
Resistance tolerance	± 10 %; ± 5 %						
Temperature coefficient	± 200 ppm/K						
Rated dissipation, P_{70} ⁽¹⁾	0.063 W	0.1 W	0.125 W	0.25 W	0.5 W	0.75 W	1.0 W
Operating voltage, U_{max} , AC _{RMS} /DC	50 V	75 V	150 V	200 V	200 V	400 V	500 V
Permissible film temperature, $\vartheta_{F max.}$ ⁽¹⁾	155 °C						
Operating temperature range	-55 °C to +155 °C						
Max. resistance change at P_{70} for resistance range, $ \Delta R/R $ after:							
1000 h	≤ 1.0 %						
8000 h	≤ 2.0 %						
Permissible voltage against ambient (insulation):							
1 min, U_{ins}	75 V	100 V	200 V	300 V	300 V	300 V	300 V

Note

⁽¹⁾ Please refer to APPLICATION INFORMATION below.

APPLICATION INFORMATION

When the resistor dissipates power, a temperature rise above the ambient temperature occurs, dependent on the thermal resistance of the assembled resistor together with the printed circuit board. The rated dissipation applies only if the permitted film temperature is not exceeded.

These resistors do not feature a limited lifetime when operated within the permissible limits. However, resistance value drift increasing over operating time may result in exceeding a limit acceptable to the specific application, thereby establishing a functional lifetime.

LEAD (Pb)-FREE

e3 = pure tin
termination finish

DESCRIPTION

Production is strictly controlled and follows an extensive set of instructions established for reproducibility. A cermet film layer and a glass-over are deposited on a high grade (Al₂O₃) ceramic substrate with its prepared inner contacts on both sides. A special process is used to ensure resistor long term operation in harsh environment (sulfur atmosphere). The resistor elements are covered by a protective coating designed for electrical, mechanical and climatic protection. The terminations receive a final pure tin on nickel plating.

The result of the determined production is verified by an extensive testing procedure on 100 % of the individual chip resistors. Only accepted products are laid directly into the tape in accordance with **IEC 60286-3 Type 1a and Type 2a** ⁽¹⁾.

ASSEMBLY

The resistors are suitable for processing on automatic SMD assembly systems. They are suitable for automatic soldering using wave, reflow or vapor phase as shown in **IEC 61760-1** ⁽¹⁾. The encapsulation is resistant to all cleaning solvents commonly used in the electronics industry, including alcohols, esters and aqueous solutions. The suitability of conformal coatings, potting compounds and their processes, if applied, shall be qualified by appropriate means to ensure the long-term stability of the whole system.

The resistors are RoHS-compliant, the pure tin plating provides compatibility with lead (Pb)-free and lead-containing soldering processes. Solderability is specified for 2 years after production or requalification. The permitted storage time is 20 years. The immunity of the plating against tin whisker growth has been proven under extensive testing.

MATERIALS

Vishay acknowledges the following systems for the regulation of hazardous substances:

- IEC 62474, Material Declaration for Products of and for the Electrotechnical Industry, with the list of declarable substances given therein ⁽²⁾

- The Global Automotive Declarable Substance List (GADSL) ⁽³⁾
- The REACH regulation (1907/2006/EC) and the related list of substances with very high concern (SVHC) ⁽⁴⁾ for its supply chain

The products do not contain any of the banned substances as per IEC 62474, GADSL, or the SVHC list, see www.vishay.com/how/leadfree.

Hence the products fully comply with the following directives:

- 2000/53/EC End-of-Life Vehicle Directive (ELV) and Annex II (ELV II)
- 2011/65/EU Restriction of the Use of Hazardous Substances Directive (RoHS) with amendment 2015/863/EU
- 2012/19/EU Waste Electrical and Electronic Equipment Directive (WEEE)

Vishay pursues the elimination of conflict minerals from its supply chain, see the Conflict Minerals Policy at www.vishay.com/doc?49037.

APPROVALS

The resistors are qualified according to AEC-Q200.

Where applicable, the resistors are tested in accordance with **EN 140401-802** which refers to **EN 60115-1, EN 60115-8** and the variety of environmental test procedures of the **IEC 60068** ⁽¹⁾ series.

RELATED PRODUCTS

The D/CRCW-IF e3 series is designed for non-harsh environment, pulse proof applications. For ordering D/CRCW-IF e3 products please refer to latest edition of datasheet www.vishay.com/doc?20024.

Notes

- ⁽¹⁾ The quoted IEC standards are also released as EN standards with the same number and identical contents.
- ⁽²⁾ The IEC 62474 list of declarable substances is maintained in a dedicated database, which is available at <http://std.iec.ch/iec62474>.
- ⁽³⁾ The Global Automotive Declarable Substance List (GADSL) is maintained by the American Chemistry Council and available at www.gadsl.org.
- ⁽⁴⁾ The SVHC list is maintained by the European Chemical Agency (ECHA) and available at <http://echa.europa.eu/candidate-list-table>.

FUNCTIONAL PERFORMANCE

PERFORMANCE IN SULFUR-CONTAINING AMBIANCE		
TEST NAME	HUMID SULFUR VAPOR TEST	HUMID SULFUR VAPOR TEST (Accelerated)
Reference specification	ASTM B809-95	ASTM B809-95 accelerated conditions
Test conditions (temperature, humidity)	60 °C ± 2 °C 85 % ± 4 % RH	90 °C ± 2 °C 74 % ± 7 % RH
Aggressive agent	Sulfur (saturated vapor)	Sulfur (saturated vapor)
Failure criteria in VI under magnification	No silver sulfide growth at the interface between termination and protective overcoat. No signs of mechanical damage.	No silver sulfide growth at the interface between termination and protective overcoat. No signs of mechanical damage.
Failure criteria in electrical test	$\leq (\pm 1 \% R + 0.05 \Omega)$	$\leq (\pm 1 \% R + 0.05 \Omega)$
Time before failure	8000 h	1000 h

Maximum pulse dissipation as a function of the pulse duration, single pulse

Maximum pulse load, single pulse; applicable if $\bar{P} \rightarrow 0$ and $n \leq 1000$ and $\hat{U} \leq \hat{U}_{max.}$; for permissible resistance change equivalent to 8000 h operation

Maximum pulse dissipation as a function of the pulse duration, continuous pulse loading

Maximum pulse load, continuous pulses; applicable if $P \leq P(q_{amb})$ and $\hat{U} \leq \hat{U}_{max.}$; for permissible resistance change equivalent to 8000 h operation

Single-pulse high voltage overload test 1.2 μs / 50 μs EN 140000 4.27

Pulse load rating in accordance to EN 60115-1, 4.27; 1.2 μs / 50 μs; 5 pulses at 12 s intervals; for permissible resistance change 1 %

Single-pulse high voltage overload test 10 μs / 700 μs EN 140000 4.27

Pulse load rating in accordance to EN 60115-1, 4.27; 10 μs / 700 μs; 10 pulses at 1 min intervals; for permissible resistance change 1 %

Derating

TESTS AND REQUIREMENTS

All executed tests are carried out in accordance with the following specifications:

EN 60115-1, generic specification

EN 60115-8 (successor of EN 140400), sectional specification

EN 140401-802, detail specification

IEC 60068-2-xx, test methods

The parameters stated in the Test Procedures and Requirements table are based on the required tests and permitted limits of EN 140401-802. The table presents only the most important tests, for the full test schedule refer to the documents listed above. However, some additional tests and a number of improvements against those minimum requirements have been included.

The testing also covers most of the requirements specified by EIA/IS-703 and JIS-C-5201-1.

The tests are carried out under standard atmospheric conditions in accordance with IEC 60068-1, 4.3, whereupon the following values are applied:

Temperature: 15 °C to 35 °C

Relative humidity: 25 % to 75 %

Air pressure: 86 kPa to 106 kPa (860 mbar to 1060 mbar).

A climatic category LCT / UCT / 56 is applied, defined by the lower category temperature (LCT), the upper category temperature (UCT), and the duration of exposure in the damp heat, steady state test (56 days).

The components are mounted for testing on boards in accordance with EN 60115-8, 2.4.2 unless otherwise specified.
