

## Technical data sheet

# Type CL101/CL101C

Control valve

Pressure reducing valve

NB : Additional information is available on the data sheet listed as «Main valve».

### Applications and general characteristics

- This valve controls and maintains a preset reduced downstream pressure regardless of variations in demand and upstream pressure (the setting of downstream pressure is always below the upstream pressure).
- This valve reduces the pressure in networks of water distribution, irrigation or pump outlet.
- Equipped with check valves, it closes automatically in case of backflow (CLc101c).

### Working principal

When the pilot M opens, pressure in the upper chamber is released and the valve A opens, reproducing the movement of the pilot.

When the pilot M closes, pressure in the upper chamber rises also and forces the membrane to close the main valve A which reproduces the movement of the pilot.

### Installation example and spare parts list

N°	Description	Material
A	Main valve	Cast iron
B	Upstream isolation valve	Nickel plated brass
B1	Downstream isolation valve	Nickel plated brass
C	Drain cock	Brass
D	Isolation valve	Nickel plated brass
G	Strainer	Brass
H	Orifice	Stainless steel
I	Flow control	Brass
J	Check valve (type CL101c)	Brass
M	Pilote valve	Stainless steel

N°	Description
1	Isolation valve of the by-pass
2a - 2b	Isolation valves of the main water pipe
3	Rubber expansion joints
4	Filter
